Important to Employers!
The Workmen's Compensation Act became effective Jan. 1, 1926, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation Schedule.
Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.
Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane and get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed reported he'd seen a white man and woman. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

Just when Pelletier believed he was dying Jim Blake appeared with a story of an Eskimo squaw left at an igloo up the coast. Pelletier discovers the story to be false and starts a search for the deserted white woman which ended abruptly when he found a dead Eskimo woman and a living baby—Little Mystery—in a nearby igloo. Several days after MacVeigh's return to the cabin Eskimos—the dangerous Kogmollocks—came for the child, and to save her the men decided to flee.

(Continued from last week)

BILLY began to pack, and Pelletier put Little Mystery on the bunk and started to harness the six dogs, ranging them close along the wall, with old one-eyed Kazan, the hero who had saved him from Blake, in the lead. Outside the firing had ceased. It was evident that the Eskimos had made up their minds to save their ammunition until dawn.

Fifteen minutes sufficed to load the sledge; and while Pelletier was fastening the sledge-traces, MacVeigh bundled Little Mystery into her thick fur coat. The sleeve caught and he turned it back, exposing the white edge of the lining. On that lining was something which drew him down close; and when the strange cry that fell from his lips drew Pelletier's eyes toward him, he was staring down into Little Mystery's upturned face with the look of one who saw a vision.

"Mother of Heaven!" he gasped. "She's—" He caught himself, and smothered Little Mystery up close to him for a moment before he brought her to the sledge. "She's the bravest little kid in the world," he finished, and Pelletier wondered at the strangeness of his voice.

He tucked her into a nest made of blankets and then tied her in securely with babiche rope. Pelletier stood up first, and saw the hungry, staring look in MacVeigh's face as he kept his eyes steadily upon Little Mystery.

"What's the matter, Mac?" he asked. "Are you very much afraid—for her?"

"No," said MacVeigh, without lifting his head. "If you're ready, Pelly, open the door." He rose to his feet and picked up his rifle. He did not seem like the old MacVeigh; but the dogs were nipping and whining, and there was no time for Pelletier's questions.

"I'm going out first, Billy," he said. "You can make up your mind they're watching the cabin pretty close, and as soon as the dogs nose the open air they'll be yapping, 'n' let 'em on to us. We can't risk her under fire. So I'm going to back along the edge of the ridge and give it to 'em as fast as I can work the gun. They'll all turn to me and that's the time for you to open the door and make your get away. I'll be with you inside of five minutes."

HE TURNED out the light as he spoke. Then he opened the door and slipped out into the night without a protesting word from MacVeigh. Hardly had he gone when the latter fell upon his knees beside Little Mystery, and in the deep gloom crushed his rough face down against her soft, warm little body.

"So it's you, is it?" he cried softly, and then he mumbled things which the little girl could not possibly have understood.

Suddenly he sprang to his feet and ran to the door with a word to faithful old Kazan, the leader.

From far down the snow-ridge there came the rapid firing of Pelletier's rifle.

For a moment Billy waited, his hand on the door, to give the watching Eskimos time to turn their attention toward Pelletier. He could perhaps have counted fifty before he gave Kazan the leash, and the six dogs dragged the sledge out into the night. With human-like intelligence old Kazan swung quickly after his master, and the team darted like a streak into the south and west, giving tongue to that first sharp, yapping voice, which it is impossible to beat or train out of a band of huskies.

As he ran, Billy looked back over his shoulder. In the hundred-yard stretch of gray gloom between the cabin and snow-ridge he saw three figures speeding like wolves. In a flash the meaning of this unexpected move of the Eskimos dawned upon him. They were cutting off Pelletier from the cabin and his course of flight. "Go it, Kazan!" he cried fiercely, bending low over the leader. "Moo-hoosh—moo-hoosh—moohoosh, old man!" and Kazan leaped into a swift run, nipping and whining at the empty air.

Billy stopped and whirled about. Two other figures had joined the first three, and he opened fire. One of the running Eskimos pitched forward with a cry that rose shrill and scarcely human above the moaning and roar of the ice-fields; and the other four fell flat upon the snow to escape the hail of lead that sang close over their heads.

From the snow-ridge there came a fusillade of shots, and a single figure darted like a streak in MacVeigh's direction. He knew that it was Pelletier, and, running slowly after Kazan and the sledge, he rammed a fresh clipful of cartridges into the chamber of his rifle. The figures in the open had risen again, and Pelletier's automatic trailed out a stream of fire as he ran. He was breathing heavily when he reached Billy.

"Kazan has got the kid well in the lead!" shouted the latter. "God bless that old scoundrel! I believe he's human."

They set off swiftly, and the thick night soon engulfed all signs of the Eskimos. Ahead of them the sledge loomed up slowly, and when they reached it both men thrust their rifles under the blanket-straps. Thus relieved of their weight, they forged ahead of Kazan.

"Moo-hoosh—moo-hoosh!" encouraged Billy.

He glanced at Pelletier on the opposite side. His comrade was running with one arm raised at the proper angle to reserve breath and endurance; the other hung straight and limp at his side. A sudden fear shot thru him and he darted ahead of the lead-dog to Pelletier's side. He did not speak, but touched the other's arm.

"One of the little devils winged me!" gasped Pelletier. "It's not bad."

He was breathing as tho the short run was already winding him, and without a word Billy ran up to Kazan's head and stopped the team within twenty paces. The open blade of his knife was ripping up Pelletier's sleeve before his comrade could find words to object.

Pelletier was bleeding, and bleeding hard. His face was shot with pain. The bullet had passed thru the fleshy part of his forearm, but had, fortunately, missed the main artery. With the quick deftness of the wilderness-trained surgeon, Billy drew the wound close, and bound it tightly with his own and Pelletier's handkerchiefs. Then he thrust Pelletier toward the sledge.

"You've got to ride, Pelly," he said. "If you don't you'll go under, and that means all of us."

FAR behind them there rose the yapping and howling of dogs.

"They're after us with the dogs!" groaned Pelletier. "I can't ride. I've got to run—and fight!"

"You get on the sledge, or I'll stave your head in!" commanded MacVeigh. "Face the enemy, Pelly—and give 'em h—ll! You've got three rifles there. You can do the shooting while I hustle on the dogs. And keep yourself in front of her," he added, pointing to the almost completely buried Little Mystery.

After convincing Pelletier that he must ride on the sledge, Billy ran on ahead, and the dogs started with their heavier load.

"Now for the timber-line," he called down to Kazan. "It's fifty miles, old boy, and you've got to make it by dawn. If we don't—"

He left the words unfinished, but Kazan tugged harder, as if he had heard and understood. The sledge had reached the unbroken sweep of the barren now, and MacVeigh felt the wind in his face. It was blowing from the north and west, and with it came sudden gusts filled with fine particles of snow. After a few moments he fell back to see that little Mystery's face was completely covered.

Pelletier was crouching down on the sledge, his feet braced in the blanket-straps. His wound and the uncomfortable sensation of riding backward on a swaying sledge, were making him dizzy, and he wondered if what he saw creeping up out of the night was a result of this dizziness, or a reality. There was no sound from behind. But a darker spot had grown within his vision, at times becoming larger, then almost disappearing. Twice he raised his rifle. Twice he lowered it again, convinced that the thing behind was only a shadowy fabric of his imagination. It was possible that their pursuers would lose trace of them in the darkness, and so he held his fire.

He was staring at the shadow, when from out of it there leaped a little spurt of flame, and a bullet sang past the sledge, a yard to the right. It was a splendid shot. There was a marksman with the shadow, and Pelletier replied so quickly that the first shot had not died away before there followed the second. Five times his automatic sent its leaden messengers back into the night, and at the fifth shot there came a wild outburst of pain from one of the Eskimo dogs.

"HURRAH!" shouted Billy. "That's one team out of business, Pelly. We can beat 'em in a running fight!"

He heard the quick metallic snap of fresh cartridges as Pelletier slipped them into the chamber of his rifle; but beyond that sound, the wind, and the straining of the huskies, there was no other. A grim silence fell behind. The roar of the distant ice grew less. The earth no longer seemed to shudder under their feet at the terrific explosions of the crumbling 'bergs. But in place of these the wind was rising and the fine snow was thickening. Billy no longer turned to look behind. He stared ahead, and as far as he could see on each side of them. At the end of half an hour the panting dogs dropped into a walk, and he walked close beside his comrade.

"They've given it up," groaned Pelletier weakly. "I'm glad of it, Mac, for I'm—I'm—dizzy." He was lying on the sledge now, with his head bolstered up on a pile of blankets.

"You know how the wolves hunt, Pelly," said MacVeigh; "in a moon-shape, half-circle, you know, that closes in on the running game from in front? Well, that's how the Eskimos hunt, and I'm wondering if they're trying to get ahead of us—off there, and off there." He motioned to the north and the south.

"They can't," replied Pelletier, raising himself to his elbow with an effort. "Their dogs are bushed. Let me walk, Mac. I can—"

He fell back with a sudden low cry.

"Gawd, but I'm dizzy—"

LEET

MacVeigh halted the dogs, and while they dropped upon their bellies, panting and licking up the snow, he knelt beside Pelletier. Darkness concealed the fear in his eyes and face. His voice was strong and cheerful.

"You've got to lie still, Pelly," he warned, arranging the blankets so that the wounded man could rest comfortably. "You've got a pretty bad nip, and it's best for all of us that you don't make a move. You're right about the Eskimos and their dogs. They're bushed and they've given the chase up as a bad job, so what's the use of making a fool of yourself? Ride it out, Pelly. Go to sleep with Little Mystery if you can. She thinks she's in a cradle.

HE GOT up and started the dogs. For a long time he was alone. Little Mystery was sleeping, and Pelletier was quiet. Now and then he dropped his mittened hand on Kazan's head, and the faithful old leader whined softly at his touch. With the others it was different. They snapped viciously, and he kept his distance. He went on for hours, halting the team now and then for a few minutes' rest. He struck a match each time and looked at Pelletier. His comrade breathed heavily, with his eyes closed. Once, long after midnight, he opened them and stared at the flare of the match and into MacVeigh's white face.

"I'm all right, Billy," he said. "Let me walk—"

MacVeigh forced him back gently and went on. He was alone until the first cold, gray break of dawn. Then he stopped, gave each of the dogs a frozen fish, and with the fuel on the sledge built a small fire. He scraped up snow for tea, and hung the pail over the fire. He was frying bacon and toasting hard bannocks when Pelletier aroused himself and sat up. Billy did not see him until he faced about.

"Good morning, Pelly," he grinned. "Have a good nap?"

Pelletier groped about on the sledge.

"Wish I could find a club," he growled. "I'd brain you! You let me sleep!"

He thrust out his uninjured arm and the two shook hands. Once or twice before they had done this, after hours of great peril. It was not an ordinary hand-shake.

Billy rose to his feet. Half a mile away the edge of the big forest, for which they had been fighting, rose out of the dawn-gloom.

"If I'd known that," he said, pointing, "we'd have camped in shelter. Fifty miles, Pelly. Not so bad, was it?"

Behind them the gray barren was lifting itself into the light of day. The two men ate and drank tea. During those few minutes neither gave attention to the forest or the barren. Billy was ravenously hungry. Pelletier could not get enough of the tea. And then their attention went to Little Mystery, who awoke with a wailing protest at the smothering cover of blankets over her face. Billy dug her out, and held her up to view the strange change since yesterday. It was then that Kazan stopped licking his fishy chops to send up a wailing howl.

Both men turned their eyes toward the forest. Half-way between a figure was toiling slowly toward them. It was a man, and Billy gave a low cry of astonishment.

But Kazan was facing the gray barren, and he howled again, long and menacingly. The other dogs took up the cry, and when Pelletier and MacVeigh followed the direction of their warning, they stood for a full quarter of a minute as if turned into stone.

A mile away the barren was dotted with a dozen swiftly moving sledges and a score of running men.

After all, their last stand was to be made at the edge of the timber-line.

In such situations men like MacVeigh and Pelletier do not waste precious moments in prearranging actions in words. Their mental processes are instantaneous and correlative—and they act. Without a word Billy replaced Little Mystery in her nest, without even giving her a sip of the warm tea, and by the time the dogs were straightened in their traces Pelletier was handing him his rifle.

"I've ranged it for three hundred and fifty yards," he said. "We won't want to waste our fire until they come that near."

(To be continued next week)

News and Notes

NOW they are chasing mosquitoes with airplanes, and where there aren't too many trees in the way only one out of a hundred escapes. That isn't exactly what the U. S. Department of Agriculture says about its work with airplanes, but that is what it amounts to. Mosquito breeding swamps have been dusted with Paris green distributed from airplanes, and more than ninety-nine per cent of the mosquito larvae were killed with one application.

* * *

Who counted the dead mosquito larvae in a big swamp and figured out that percentage? Nobody. But pans containing a known number of the tiny insects were placed in various sections of the swamp, and when the airplane finished the live ones were counted.

* * *

Sport model flivvers and good scholarship don't go well together, in the view of the Board of Trustees of the Pennsylvania State College. Penn State students have been warned that any of them who keep or operate an automobile at the college without a special permit from the officials will be expelled for the balance of the college year.

* * *

The average Pennsylvanian eats 200 eggs a year. Half of them are produced within the state. The others are imported, many from henneries from one to three thousand miles away.

* * *

More than 16,000 farm tractors have been shipped from factories in the United States to Soviet Russia since January 1, 1925. According to the Russian Information Bureau there were only 500 tractors in the whole Russian Empire before the World War.

* * *

It is no small task to care for a small baby. A number of people have suspected that for some time, but now it has been proven by the U. S. Bureau of Home Economics. The Bureau has learned from the reports of seventeen young mothers that "The care of one baby is a full-time job for its mother for five hours and forty-one minutes every day, and a part-time job the rest of the twenty-four hours."

* * *

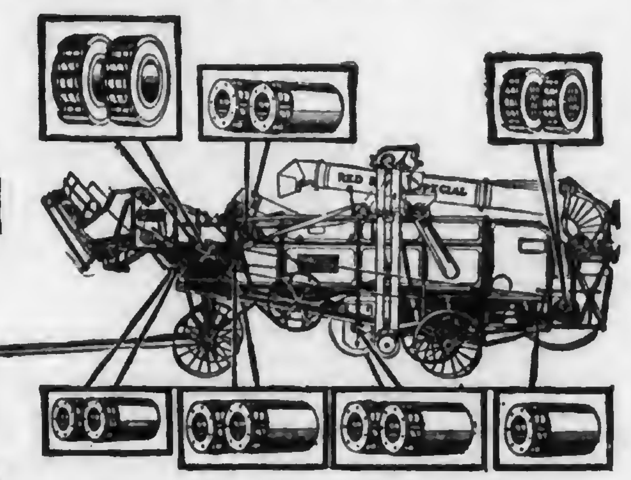
A large motor truck manufacturer has announced a new machine with a capacity of fifteen tons. It is of the semi-trailer type and can turn around, without backing, in a street thirty-four feet wide.

* * *

Uncle Sam is thinking about making a change in the size of paper money,—to save money. By making bills smaller the Treasury Department will save about $3,000,000 a year, partly because they won't require so much paper, and partly because they will not wear out so quickly due to being folded so many times. The proposed size is six by two and one-half inches.

* * *

Four nurses in a traveling hospital are kept busy looking after men who are injured while working on the construction of the new Broad Street subway in Philadelphia. As the subway work progresses the little hospital moves along with it. More than 2500 men have been injured since construction started.



Because it SAVES All the GRAIN—
The 4 Threshermen and 13 ROLLER BEARINGS
Alemite-Zerk Lubrication and the Tilting Feeder
The 4 Threshermen—the Big Cylinder, the "Man Behind the Gun," the Steel Winged Beater and the Beating Shakers—are built into every Nichols & Shepard Thresher.
In the 22x36 farm thresher, they are ready to work for you, to thresh your crop, just when it is fit, and send the last kernel of grain to the wagon box, none to the straw pile.
12 Hyatt Roller Bearings with Alemite-Zerk Lubrication are standard equipment on 22x36 Nichols & Shepard Threshers. A Fordson handles it successfully.
The roller bearings greatly reduce the power necessary to thresh with any model.
A new manufacturing method puts the price within the reach of any farmer.
The construction is practically all steel, making the machine very long lived.

OUR YOUNG PEOPLE'S FORUM.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—There are twelve in our family counting my sister-in-law. I will try to tell you something about Florida. We have been here since September. The winters down here are like the summers up north. Oranges and grapefruit are ripe now, they have been ripe for about three months but will not be here much longer.

We live about two blocks from the Halifax River and about a mile from the Atlantic Ocean.

I went in bathing in the ocean on Christmas day. Well, I must say good-bye.—Elizabeth Allen (X), twelve, Volusia County, Fla.

You've celebrated Christmas in a way few Forum friends have. I'm sure. Did you have a Christmas tree or does Santa Claus visit Florida at all? There must be lots more interesting things you can tell us about the country down there, aren't there?

Dear Cousin Ruth and Forum Friends:—I am in the sixth grade at Fort school which is a little country school about one-half mile from my home. I mostly walk only when the snow is too deep. I haven't missed a day of school for three years.

I enjoy farm life. I help my father plant potatoes. For pets I have a pony, three calves, two horses and eight pigs. I love to ride horses.—Russell Rummell, ten, Westmoreland County, Pa.

Dear Cousin Ruth and All the Rest:—I think Mary Sunshine's plan is a good one. I think this page is the best in the paper but everybody writes the same thing too often. Can't you write about different things? We have a pet canary bird, a dog and some pet chickens and, Oh, I must not forget the lamb. He is a frisky little fellow.

WHEN I WAS SMALL
Margaret Stout, Cambria County, Pa.

Here is a recipe for candy.

2 cups of white sugar
⅔ cup of milk
1 tablespoon butter

Put this on and boil till it will form a soft ball when put in cold water. You can leave it white or put coloring into it. When done, beat, add vanilla and place on buttered plate or pan.—Olive Blake, Mercer County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending a recipe for candy.

BUTTER SCOTCH CANDY

1 cup sugar
½ cup molasses
1 tablespoon vinegar or lemon juice
2 tablespoons boiling water
½ cup butter

Boil together until a bit dropped into cold water becomes brittle, pour into buttered pans and when cool mark in squares.

Will some of the Forum friends tell me how they make their bird houses as I would like to make some? How many of the girls at school go for walks? We do. One day we went for pussy willows and evergreens. How many of the Forum friends like to gather arbutus?—Madeline Pepple, thirteen, Bedford County, Pa.

I hope a lot of you will send in directions for making bird houses so that Madeline can make plenty of homes for her feathered friends.

Dear Cousin Ruth:—I like to help my father. My big brother and I play games and he is going to set traps next year. Fishing season starts soon and I like to fish awfully well. I have good luck sometimes. We have lots of cows and hens and many other things. Where do you live, Cousin Ruth? Have you any sisters or brothers? Do they write to the Forum page?—Lawrence Hoag, (X), Wayne County, Pa.

I live in Delaware County, Pennsylvania, just outside of the big city of Philadelphia, where I come to the office every day. I have a brother and a sister but they're too grown up to belong to our Forum. My brother likes to go fishing, too. He goes to the ocean sometimes to try his luck.

Dear Forum Friends:—We are going to get 500 little chicks on May 1st. My school will be out on April 30th. I pity you boys and girls in the city with school lasting until June. You should move to the country.

I have a calf named Cherry Blossom. Here is a candy recipe.

BUTTER SCOTCH

Butter size of walnut
1 teaspoon vinegar
1 cup brown sugar
½ cup cold water.

Boil together until they form hard ball when dropped in cold water. Then pour on greased platter.—Julia McDanel, eleven, Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—How many Forum friends like to embroider? I like to very much. In the summer time I go swimming almost every day. I think it is a fine sport.—Virginia Mae McDonald, twelve, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—Spring is here and I am having a good time. I like to gather flowers. The arbutus is in bud now. I think it has a good smell. There are lots of birds here. It is not very warm here yet for spring. I will send you a recipe for Florense Martin. Here it is:

FUDGE

2 squares, or ounces chocolate
½ cup cold milk
2 cups granulated sugar
⅓ cup cane syrup
2 tablespoons vanilla

Grate chocolate and add all the ingredients except vanilla; cook slowly, stirring once in a while. Cook until it makes a soft ball in cold water (requires about five minutes after actual boiling begins).

Remove from fire, add the vanilla and beat until it begins to granulate. Pour out at once into a buttered pan. Mark deeply in cakes when nearly cold.

My sister and I make it and it is good. If it isn't good at first boil it again, but not as long.—Belva Pealer, ten, Columbia County, Pa.

Dear Forum Friends:—I have five pet cats, and a dog, and a pet chicken which has fourteen chicks a few days old. My mother has a turkey gobbler that weighs thirty pounds and we have three hens.

In the summer I pick strawberries, dewberries and black diamonds, and also pick huckleberries in the woods which grow wild. We have several fruit trees.

In fishing season I go fishing and catch pike, cat fish, eels, rocks, sunfish, pickerel and bass in a nearby lake.—Thomas F. Landy (X), Atlantic County, N. J.

Dear Cousin Ruth:—I live on a farm two miles south of North East and here my father runs a dairy. We keep nineteen cows. I have one brother, Edward.

In the winter time my brother and I go down the large hill that we live on top of. We have lots of fun with our new sleds sliding to school and then when we get there.

Cousin Ruth, do you have a radio?

READY TO GO INTO BUSINESS
B. Irene Smith, Wyoming County, Pa.

We listen to it every night and hear many interesting things.

In the summer when school is out I help my mother with the housework, cook and bake and do many other things. What time do the schools let out where you live? They are out here May 25th.—Alice Bogert, eleven, Erie County, Pa.

Most of the schools in and around Philadelphia aren't out until near the end of June.

Dear Cousin Ruth:—Our school stopped on April 12th. Cousin Ruth, I wish you could be out with us this summer in watermelon time. We plant two or three acres of watermelons and cantaloupes every year. Sometimes in the evening the machines just come rolling in.

I have two brothers and four sisters. One brother and two of my sisters have a birthday on the same day, the 20th of February. Now, I will send some riddles.

1. What has three feet and can't stand?
2. What stands in the middle of the bed its heart in its head?
3. What goes upstairs with four legs and comes down with eight legs?
4. What goes around the house with two legs and only makes one track?

Look for the answers in the paper later.—Ruth E. Leaman, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—Spring is here at last but it is very cold. I have a pet dog named Major. He helps me watch the sheep. We won't have many to watch this summer as we only have eight big ones and seven lambs. He also helps with the cows. We live on a small farm.

I only have one brother. His name is Norman. We have good fun together when we come home from school. He has a wheelbarrow and I have a wagon so between the two we have good fun getting in wood.—Triman Grim (X), York County, Pa.

Mother's Day

SPRING is so late this year that most of the leaves and flowers are still hidden away. Only here and there a few brave blossoms peep out and these daring ones are those you'll want to find for mother tomorrow—a gift for Mother's Day. Mothers always enjoy flowers and this year when blossoms are so few and far between they'll appreciate more than ever a bunch of wild flowers from some sheltered corner that you've discovered. If you haven't already found a hidden corner you'd better search today and tomorrow bright and early gather a bouquet for mother.

Best wishes to all your mothers for a happy day.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Twelve birds are peeping out at you from the twelve sentences below—a bird in each sentence. You will see that a LARK is looking at you in the very first sentence. When you have found the birds, write down the number of the sentence in which you found each one and send them to me on a POSTCARD so that I have your answer by May 15th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks have been very careless and have been making simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the April 17 issue of Pennsylvania Farmer is: AMERICAN.

The puzzle prize winners are: Cora Birckhead, age 12, Hebron, Md.; Alice Bogert, age 11, North East, Pa.; Martha Buck, age 8, Tamaqua, Pa.; Bettie Buzzard, age 9, Ebenburg, Pa.; J. Alton Cressman, age 12, Cementon, Pa.; Jacob W. Keller, age 9, Reamstown, Pa.; Clyde M. Raudenbush, age 12, Port Treverton, Pa.; Rosalie Sinclair, age 10, Norristown, Pa.; Alice Skees, age 12, Quakertown, Pa.; Edna Thomas, age 7, Boonsboro, Md.

Honor prize winner: Joel R. Bloss, age 11, Walnutport, Pa.

1. He always asked for a particuLAR Kind of feed.
2. When Alice found that she was thru, she was very much surprised.
3. That boat is going to Rio. Let's go, too!
4. Charles Dawes is Vice President of the United States.
5. They told me that I put my card in altogether too soon.
6. The freeze after the thaw killed the young buds.
7. He gave a mighty wrench and the spike came out.
8. Some sneak thieves tried to rob in our town last night.
9. Sharp as the wasp, arrows came flying.
10. The sea gleamed in the setting sun.
11. The crown prince was traveling around the world.
12. Pussy's bowl is full of milk.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood, except numbers 6 and 7)

1.—These delegates to the conference of the Women's National Committee for Law Enforcement "stormed" the United States Capitol in protest against modification of the present prohibition laws.

2.—Wild geese receive food and protection at the home of Jack Miner, Canadian naturalist, author and bird lecturer.

3.—Ruth Meyer, one of Washington's youngest horsewomen, shown with her mount.

4.—This old waterwheel near Quilcene, Washington, makes a picturesque background in cherry blossom time. It furnished power for the printing of one of the state's early newspapers.

5.—Watson Russ, 67, and William M. Taylor, 75, veterans of the Alaskan gold fields, who have staked a claim near Kramer, California, the scene of a new gold strike.

6.—Raw materials in the storage bins from which they begin their trip thru the plant of a large tractor manufacturing company. See picture 7.

7.—Here the materials in picture 6 have finished their journey and appear as a tractor, ready to be driven away under its own power.

Who's Who in Our Family

Introducing Six More Contributors to the Page

In the issues of Pennsylvania Farmer for November 8, 1924, December 13, of the same year, and June 6, 1925, we had an opportunity to get acquainted with several of the contributors to our Home Page. This week, others, whose names have become familiar but whom we have never seen, are being introduced.

Gertrude Smith Stewart

A BEAUTIFUL farm in Ohio was my home for the first fifteen years of my life, after which we moved to a nearby city, where several of us were in high school. I never really left the school room, for when I was graduated I became a teacher and taught for fourteen happy years.

City schools in Ohio and Montana, with one year in the country, were, and still are, a big interest. My summers, too, were busy, for if I wasn't supervising a playground or teaching, I was attending school myself. In 1918 I took up special work at Columbia University, and thru the Red Cross activities at that time decided to go abroad as bedside teacher of crafts in the army hospitals. The glad day of the Armistice interrupted, and I returned to work for four years in hospitals here.

Mrs. Stewart, Home Page Editor

We Have Common Interests

Now I am living on a Jersey farm, busy each day with the same sort of duties which occupy your minds and time; busy as wife, mother, daughter, neighbor, and friend.

We have much in common. I love as you do the innumerable joys of the country; the early morning bird song, and the twilight call of the whip-poor-will; the blossoming hillside orchards, and the fragrance of autumn fruit; the waving fields of growing grain, and the clear, pure smell of new-mown hay; the sowing of tiny seeds in the springtime, and the gaiety of summer flowers; the glory of a sunrise or a sunset; the chatter of little children, and the sage advice of venerable old age—the blessings of home.

You have all been very kind in your fine spirit of welcome and genial cooperation since I became Home Page Editor, and it is genuinely appreciated. We are all interested in the increased welfare of rural life and the good we can do thru our page.—Home Page Editor, N. J.

Edith Rulifson Dilts

MOUNTAIN LAKE PARK, Maryland, was my birthplace, Cumberland my home for six years, when we moved to Youngstown, Ohio. Later we moved to a farm in western New York.

How well I remember those first impressions of farm life! Our nearest neighbor was a mile away, and the little red school house was two. We went to school in the same building and to the same teacher to which my father had gone. From the country school I attended high school seven miles away, driving a horse one year and working for my board the remaining three.

Then followed four memorable years at Cornell, where I took up the Domestic Science Course. The war was being fought desperately in those years of 1917 and 1918, and Home Demonstration, in which I was specializing, was being emphasized very strongly at Cornell. Food problems, leadership and organization waxed strong.

Without waiting for graduation many of us went out with instructors teaching and demonstrating sugarless, wheatless, and meatless possibilities and necessities. Soon I was at work as a Home Demonstration Agent myself, first in Steuben County, N. Y., and in 1920 in Mercer County, N. J. I learned to know rural people and greatly enjoyed working with them. In the fall of this year, Mr. Dilts and I were married. I have been able to keep in close touch with Home Bureau work thru Miss Francis who lived in our home for three years while continuing the work in Mercer County.

Our two little girls of four and two years demand most of my time at present but I shall always have a sincere interest in my former work, and in the rural press.—Mrs. E. R. D., N. J.

Minnie I. Kohler

I HAVE lived a very ordinary, uneventful life. I was born in a little town or overgrown village, and moved to a farm at the age of four. Most of my early days were spent on a mortgaged farm where money was never plentiful. I left school at the age of fifteen to begin teaching. I never enjoyed the privilege of going to high school or college. My sister and I paid off the mortgage on the old home by teaching school. I have worked in the post office, too.

Mrs. Kohler, known to our readers as Hilda Richmond

I was very happily married and lived so until two years ago when my husband was taken suddenly ill and died,—the greatest sorrow of my life. I have one child, a boy of eighteen, a senior in high school. I have always been interested in farming, and own and manage our farm which my husband farmed successfully for years. I am particularly interested in sheep and have a good flock.

You see I am an ordinary, everyday home body in every way. With my sister I still share ownership of the old homestead. I have firm faith in the farmer and his family, in the future of agriculture, and the farm home as the best place for boys and girls to grow up.—Hilda Richmond, Ohio.

Doris W. McCray

YOU will be interested to hear that I married a Pennsylvania farmer, shortly after he was graduated from Iowa State College at Ames, where we met. I am a graduate of the University of California, but also studied three years at Ames. I taught in California, and was married there, but settled down on an Iowa farm. I have done some demonstrating, but mostly writing, as that does not take me away from home, and our little two-year-old boy.

I keep reading and studying all the time and in summer am busy judging women's exhibits at neighboring fairs. I greatly enjoy my work and especially since my husband does not in the least object to my testing all kinds of recipes. With all my housework I keep pretty busy, but aim to have the house very convenient.

Mrs. Doris W. McCray

Mr. McCray won a trip to Philadelphia by writing $100,000 in insurance since August, 1925, and if he can duplicate that before August, 1926, I'll pay you a little visit next summer. He has quit farming but in selling insurance to farmers, he thinks he is doing something very worth while.

It was last summer on a trip East that I had my first glimpse of Our Page in Pennsylvania Farmer, and you well know how much I like it.—Mrs. D. W. McCray, Iowa.

Lalia M. Thornton

MRS. THORNTON, whose work appears frequently in these pages, is a writer of stories, verse and household articles for many publications. She considers her sunny, little writing room with its litter of notes, letters and stationery one of the dearest rooms in the house.

For a number of years she held down a desk as reporter for a daily paper, but now gives her time entirely to her husband, her young son, her home, and a bit of general literary work.

Mrs. Thornton likes cooking, but refuses to express an opinion relative to sweeping and dusting, especially just at housecleaning time. A pair of rubber gloves, plenty of cold cream, and a firm belief that there are lots of worse things to do help her to keep the corners of her mouth from turning down.—S.

Mrs. Elias M. Kintzel

BEFORE my marriage I practiced professional nursing. Today I am the wife and helpmate of a modern farmer, and a busy mother caring for five children, and attending as best I can all the many duties farm life brings.

Mrs. Elias M. Kintzel

I take pleasure in writing a few things for Our Page once in a while, and I am always grateful for the many helps it brings to me.—Mrs. E. M. K., Pa.

Mother's Day

I KNOW what Mother's Day will mean to me. The children will go out in the dales and dells and bring in violets and May flowers. One will bring a large bouquet and present it with a kiss. Another—the boy—will bring five or six blossoms. They will be the very choicest blooms by virtue of size or tint. He will rub my hair and quote a curious mixture of high school French and Latin, "Ego amo tu, ma mere" ("I love you, my mother").

There are five kiddies, and each will bring a little surprise bouquet. Each will bring that shining expression which radiates love better than mere words.

Flowers seem to be a natural expression of love but somehow I do not find the carnation a fitting symbol to wear for my own mother who is nearing seventy. I wear May flowers in preference. In her manner, her appearance, her spirit, she is so sunshiny, so just like eternal springtime.—Dora Mon Dore, N. Y.

THOSE AFTER HOURS

A Piece of New Furniture Makes Such a Difference in a Room

EVERY woman gladly tells you the hours she enjoys most are those restful hours of relaxation and pause, spent with books, papers or perhaps a bit of needlework.

The joy of these times of comfort and diversion is due to the freshness, cleanness and newness of surroundings, however familiar they've grown. After days of soap, water, broom, mop, dusting and polishing—spring housecleaning—what a cool, sweet glow of cheer, of content, a home has. And what a change a mere piece of new furniture makes. Perhaps it is but an old piece done over with a coat of varnish, paint, or a colorful cover.

Every woman wants her rooms charming and comfortable, and if she has initiative she will find a way to make them so. If she cannot obtain the latest and the loveliest house furnishings offered by the big stores, she doesn't despair but visits public sales where one may buy so reasonably.

Life is teeming, as the books say, with possibilities, opportunities all about us to ideally cheer, brighten and beautify our homes whatever our means. All one needs to do is to look wisely about, they are ours for the taking.—Gertrude Shockey, Ohio.

Springtime Don'ts

DON'T forget that a cloth dipped in hot vinegar, then in sifted wood ashes, is an excellent cleaner for nickel or brass.

Don't forget that a piece of tallow tied into a stove cloth, rubbed over the top, while warm, polished with a newspaper, will surprise you.

Don't forget to sow plenty of flower seeds for your own use and to give to your neighbors and the sick this summer.

Don't forget that an hour's rest in the middle of these busy spring days may save you a sick spell later on.—Owl Hollow Housewife, Pa.

Dandelions for Winter

CLEAN, wash thoroly and drain the tender dandelion greens. Salt vinegar to suit the taste, and heat to boiling point. Drop the dandelions in and keep stirring until they have become wilted, then immediately pack in sterile jars. Cover with the boiling vinegar and seal. Endive may be prepared in similar manner.—Nora Kelley, Pa.

Prize Winning Hints

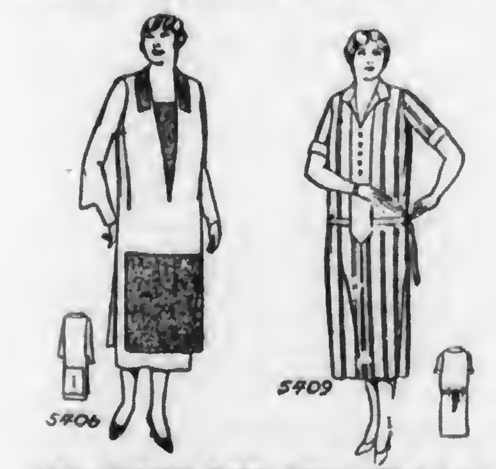
A FINE new tablecloth was damaged by mice. The hole was as large as half a baseball cover, and about that shape. I placed the torn portion, wrong side up, in a large embroidery hoop. Then removing the foot of my sewing machine, I turned the hoops upside down and placed them under the needle of the machine. Putting on the tension I started the machine, moving the hoops back and forth as I stitched one direction using a very long stitch.

I next replaced the foot (without removing the goods) and with a very fine stitch, stitched diagonally across the darn; turning I made the second row about one-sixteenth inch from the first stitching and so continued until the entire space was stitched. Many folks were unable to find the darned spot when I told them, and after the tablecloth was worn out the darn remained firm. I have often used this plan since, and find it neater and stronger than hand darning.—Mrs. Charles E. Kissinger, Pa.

Summer Styles New and Novel

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5406.—For Mature Figures.—Twill, kasha, satin or taffeta could be used for this model. The trimming illustrated is soutache braiding. One could use contrasting material for the collar, vestee and apron portions. Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size requires 5½ yards of 40-inch material. For vestee, apron portions and collar facing of contrasting material 1⅜ yard 40 inches wide is required. Pattern, 10 cents.

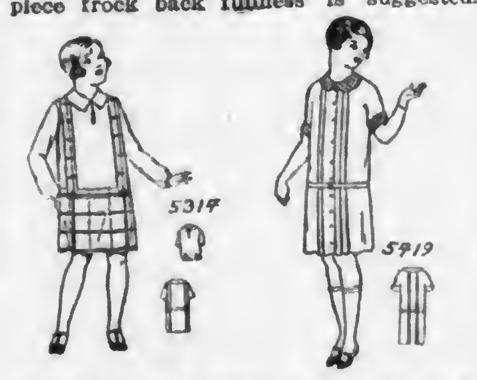


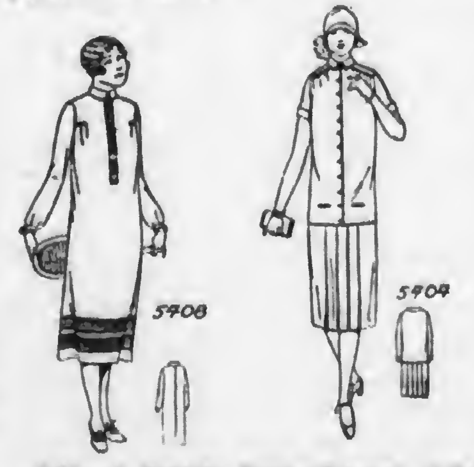
5409.—Popular House Dress.—This style is good for tub silk, jersey weaves, gingham, percale, linen and flannel. Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. To make this style for a 42-inch size as illustrated will require 1 yard of plain material and 4⅞ yards of striped material 32 inches wide. Pattern, 10 cents.

5314.—A School Dress.—This style is good for wash materials, for flannel or gingham or can be made by using plaid woolen for the skirt and wool crepe for the guimpe. Four sizes: 4, 6, 8 and 10 years. A 6-year size, if made as illustrated, requires 1¼ yard of 36-inch material for the guimpe and 1⅜ yard for the skirt. If made with short sleeves the guimpe will require 1 yard of material. Pattern, 10 cents.

5419.—A Simple Model.—Is a good style for wash materials. Four sizes: 4, 6, 8 and 10 years. To make as illustrated for a 10-year size, will require 2½ yards of 36-inch material with ¼ yard of contrasting material for collar and cuffs. Pattern, 10 cents.

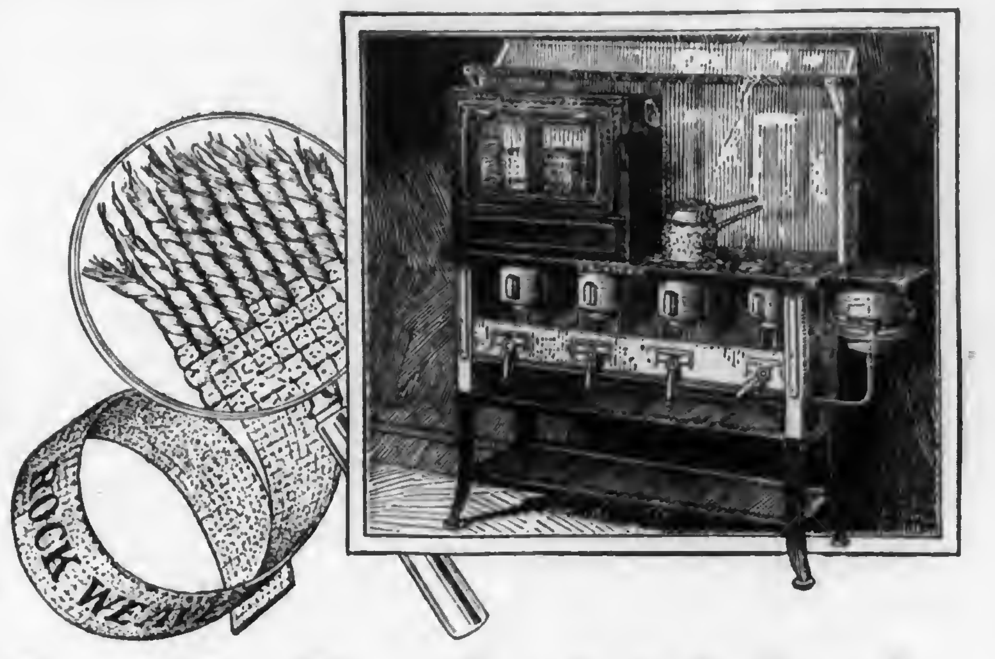
5408.—A Youthful Dress.—In this one-piece frock back fullness is suggested. The front has a smart turned over collar and the popular lap closing. Three sizes: 16, 18 and 20 years. An 18-year size will require 3¾ yards of 40-inch material. Pattern, 10 cents.





5404.—A Popular Style.—Flannel, faille, taffeta, jersey or linen may be used for this design. Eight sizes: 16, 18 and 20 years for misses and small women, and 36, 38, 40, 42 and 44 inches bust measure for ladies. To make this attractive style for a 38-inch size requires 3⅞ yards of 54-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.



Let It Cook 30 Meals —*then* Decide

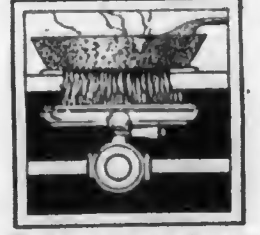
PROVE to yourself how much easier, better and quicker the NESCO will do your cooking. Try its quick, intense heat in baking biscuits, angel food, or flaky pie crust. See what perfect bread you can bake; the splendid roasts you can have with its even heat turned lower. The flame never creeps or crawls. Fry a steak over its intense blue flame. Use the NESCO ten days. Then decide. If it doesn't do everything the dealer said it would, send it back and the dealer will refund your money.

Go now to your NESCO dealer and see this better oil cook stove. Have him show you the patented Rockweave Wick that requires no trimming and cleans by burning. Ask him to demonstrate the famous NESCO burners that light like an ordinary oil stove but quickly develop a clean blue gas flame of greater intensity.

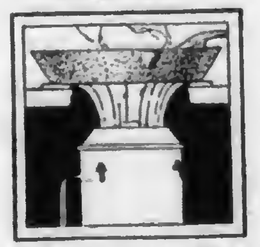
With this intense and concentrated heat NESCO fries, bakes, boils and broils with the speed and efficiency of gas. Economical, too. The NESCO burner operates 24 hours on a gallon of kerosene. Over a million in use.

Home demonstration agents and thousands of women endorse this stove and its wonderful burner. Its use in your own home will prove that NESCO brings to the farm home the convenience, cool comfort and better cooking results of a city gas range. See your NESCO dealer today.

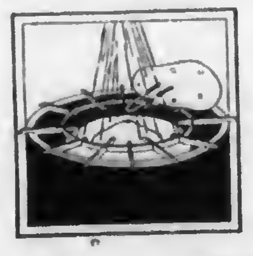
NATIONAL ENAMELING & STAMPING CO., INC.
Advertising Dept., 425 E. Water St., Milwaukee, Wis.
Branches at: Milwaukee, Chicago, Granite City, Ill., St. Louis, New Orleans, New York, Philadelphia, Baltimore.
Licensed Canadian Manufacturers: Dominion Stove and Foundry Company, Penetanguishene, Ontario, Canada.



The intense heat of a gas stove burner is due to the flame striking and spreading under the entire base of cooking utensils.



So also the blue-gas flame of the Nesco Burner strikes and spreads under the entire base of the utensil, producing an intense gas flame cooking heat.



A hairpin inserted in a potato and placed over a Nesco Burner glows red hot in an instant. This test proves Nesco's intense cooking heat.

Grow Birds Like This!

Barred Rock hen owned by W. H. B. Kent. Best heavy breed hen in 1923-24 Bergen County, N.J., egg-laying contest. Record, 259 eggs

feed

FUL-O-PEP GROWING MASH

(it contains Cod Liver Meal)—to make young chickens grow faster and to develop real producers

YOUNG chickens simply must thrive when you feed Ful-O-Pep Growing Mash. In addition to the oatmeal and other ingredients this exceptional mash contains Cod Liver Meal.

Growth is swift, but natural, and the young birds come to early maturity in better shape for market or for laying. You get immediate profit and satisfaction from early birds, and you get lasting and permanent profit from better producers and improved stock.

Read what W. H. B. Kent, Cazenovia, N. Y., says, and then look over the evidence of what Ful-O-Pep Growing Mash has done for his flocks:

"My Ful-O-Pep raised birds are making splendid records in the egg-laying contests. There doesn't seem to be anything quite the equal of this mash to develop the size, frame and stamina, and to make the most of the birds' breeding."

Contest records of W. H. B. Kent, Cazenovia, New York

Leading Barred Rock pen in the Vineland, New Jersey, egg-laying contest, Feb. 13, 1926.

Leading Barred Rock pen in the Bergen County, New Jersey, egg-laying contest, and gaining February 13, 1926.

Leading Barred Rock pen, New York State, egg-laying contest, Farmingdale, Long Island, January 23, 1926.

Leading Barred Rock pen, Storrs, Connecticut, egg-laying contest, January 2, 1926.

The pen of five birds at Western Washington contest made the fine record of 131 eggs in December, and 138 in January, or an average of 53.8 eggs per bird for the two months.

The pen of five birds at the 1924-25 Western Washington contest, Puyallup, Washington, averaged 241 eggs.

These birds as well as the others were started on Ful-O-Pep Chick Starter and developed on Ful-O-Pep Growing Mash.

Feed Ful-O-Pep Growing Mash from the sixth week through the fifth month. Feed baby chicks, to the sixth week, on Ful-O-Pep Chick Starter. This starter contains both Cod Liver Meal and Cod Liver Oil and reduces losses by giving baby chicks a firm hold on life. The oil is like direct sunshine; the meal provides digestive strength. And the oatmeal base and other ingredients are just what chicks like and need.

Somewhere in your vicinity there is a dealer who sells the complete line of Ful-O-Pep Poultry Feeds. You ought to know him, and know what makes these feeds so profitable to farmers and poultrymen alike. Send for your copy of the Ful-O-Pep Poultry Book. It's free. Just clip and mail the coupon below.

The Quaker Oats Company

CHICAGO, U. S. A.

Feed Ful-O-Pep Chick Starter, containing Cod Liver Oil and Meal, first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash, containing Cod Liver Meal, from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash containing Cod Liver Meal, at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on

THE QUAKER OATS COMPANY, 57 Railway Exchange Building, Chicago, U. S. A.
Please send new poultry book with full information on Ful-O-Pep Growing Mash, with *Cod Liver Meal and how to feed it.*

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Hens Die Suddenly

I have had two White Rock pullets die in the last few days and would like you to tell me the cause and treatment. They are in excelent condition, medium fat and seem healthy. They show no sign of sickness. Die very suddenly.—H. T., Washington County, Pa.

When hens that have been in apparently good health are found dead on the nest it is usually caused by an internal rupture due to the strain of laying. Such losses occasionally occur in the best managed flocks, especially among heavy laying pullets when egg production first starts. The normal death rate in many poultry flocks is largely made up of losses due to internal ruptures and oviduct troubles.

A balanced ration and plenty of exercise helps to reduce such losses. Cull out hens that become heavy with fat and you can reduce the losses from apoplexy, internal ruptures and liver trouble. Some birds are of the beef type and place the egg making materials in the ration into fat. They are apt to be spring layers and very low producers at all other seasons. Breeding from such birds helps to increase the number of beef type birds in the flock.—R. G. Kirby.

To Control Worms

Please tell me what to give hens which are troubled with worms.—E. L. L., Clearfield County, Pa.

Placing two per cent tobacco dust in the laying mash helps to control and remove worms. Each week give the flock a dose of Epsom salts at the rate of one pound per 100 hens. The salts are given in the drinking water. Allow the flock to become thirsty and place the salts in enough water to give all the flock a chance to obtain a drink.

Some poultrymen give their hens individual treatment by giving worm medicine to each bird in capsule form. Another treatment is to steep one pound of ground tobacco stems for each 100 hens in the flock. Use just enough water to cover the stems and steep for about two hours. Feed sparingly the day before the treatment and give no feed the day of the treatment until early afternoon when the hens are given the tobacco mixture stirred into enough laying mash to give all the birds a dose. Two hours later give more mash containing twelve ounces of Epsom salts. This treatment should be repeated one week later.—R. G. Kirby.

Buying 500 Chicks

I am planning to buy 500 baby chicks and am undecided about the brooder. Is the forty-two-inch canopy large enough for 500 chicks? Would it be advisable to buy the 1000-chick size so as to give them more space? I have a house, semi-monitor type, with three 2 ft., 4 in. by 4 ft. windows on the south side, and two on the west, 16x20 ft.—6 ft. front, 5 ft. 6 in. rear, 7 ft., 6 in. high point. Also have two ventilators on roof with a ten-inch opening at lower end. Is it possible to ventilate this house properly as it is at present? During cold weather how should the windows be adjusted? I haven't been able to keep the house dry all winter. A good many hens had trouble with their legs, couldn't stand. I put them in a dry, warm box and usually within twenty-four to forty-eight hours they would be all right again. As they were getting proper feed I blamed the trouble to dampness. Would this affect egg production?—Q. E. S., Sullivan County, N. Y.

According to my experience the largest size coal burning brooder stoves with the fifty-two inch canopy are the best. Then I have the best results and the lowest mortality when the chick flocks are not larger than 250 to 300 birds. There is a tendency to exaggerate the capacity of brooders and I think this sometimes causes serious losses to beginners. Too many buy a 1000-chick brooder and expect to order 1000 chicks at the same time. A 1000-chick brooder is fine for 250 to 300 chicks.

Overcrowding May Be Cause

Overcrowding with hens may cause a house to be damp. When a house is damp the conditions can be improved by opening up more of the front to allow the outside air to dry the walls, ceiling and litter. Too much glass in a poultry house may make the house very warm during the day. At night the outside air cools rapidly and moisture condenses on the walls and ceiling and drips into the litter.

Opening up the house during the day to permit the sun and air to enter keeps the house from becoming too warm. Then the windows can be closed and storm curtains lowered at night with less danger from dampness. In moderate winter weather one of the windows can be left open every night to help prevent dampness.

Leg weakness can often be prevented by including one per cent cod liver oil in the laying mash. Pure sunshine helps to prevent leg weakness. It must not be sunshine filtered thru glass. Dampness may also cause rheumatism which might result in leg weakness. Damp houses may cause a reduction in laying thru undermining the health of the flocks.—R. G. Kirby.

Treatment for Smut

NO treatment has yet been found that can replace the old formaldehyde method of killing smut in oats. One pint of formaldehyde on forty or fifty bushels of oats is a sure cure for smut. Any of these methods of application will do: Mix the pint of formaldehyde with one pint of water and spray it on the seed; mix it with five gallons of water and sprinkle it; or mix it with forty gallons of water and soak the seed. However, the easiest method is to use one pint in five gallons of water.

Distribute Evenly

Pile the oats on the floor or in a wagon bed and as they are being shoveled over apply the solution slowly with a sprinkling can. The only precaution is to distribute the formaldehyde as evenly as possible thru the pile. It is not necessary to wet every grain because the seed should be covered for about five hours with a blanket or sacks to confine the gas in the pile. The gas will kill the smut.

If the pile should be covered for two or three days or a week, it will do no harm but if the oats must be held for several weeks before sowing, it would be well to open the pile and allow the gas to escape before the seed is sacked. However, it is best not to use the old sacks for these disinfected oats since some smut may remain in the sack and be spread to the oats.—C. T. Gregory, Purdue University.

LAWRENCE P. UHL
THE OLDEST AND LARGEST INDIVIDUALLY OWNED AND OPERATED HATCHERY IN OHIO.
I am a PIONEER in the Baby Chick business. For 20 odd years I have been producing high class Baby Chicks which have gone out to thousands of Poultry people of America and proven highly satisfactory. For years previous to 1919, (when he retired), I was associated with M. Uhl, New Washington, Ohio, who was Father and originator of the Baby Chick business in Ohio making the first shipment of Baby Chicks 25 or more years ago. Since 1919 my output has been entirely taken by dealers who supplied a long line of year after year customers. I have decided to give the GENERAL PUBLIC an opportunity to buy my high class Chicks direct, from the Hatchery here at New Washington and I am in a position to furnish these excellent Chicks in almost any quantity and on short notice at the following prices:
For quick action order from this advertisement in perfect safety. Reference: Duns or Bradstreet. Farmers State Bank. Free Catalog. If it is QUALITY you want try our Chicks this season before it is too late. Let us know your exact wants if you do not find it in this price list. I want your business and you may rest assured that I will take care of you RIGHT.

43 per cent cottonseed meal..	42.50@[illegible]
34 per cent linseed meal.....	54.75@[illegible]

Extremely light production of millfeed with demand persistent for nearby supplies.

For Baltimore, Cumberland and Williamsport rate points, subtract [illegible] per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

County News and Comment

Allegheny County, Pa.—Have had dry and windy weather. No warm days. Quite a snow flurry today. Wheat, meadows and pasture have made but little growth. Spring plowing about done. Nearly all oats have been sown. A few farmers are about out of rough feed for stock. Baby chicks are claiming the time and attention of many farmers just now. Young pigs very scarce and price is high when they can be bought at all. C. K., April 26.

Blair County, Pa.—Cold, stormy weather at present. Grass and wheat started to grow during few warm days but is at a standstill at present. Farmers plowing and sowing oats. Few potatoes are planted. Some gardens made. There is still a lot of plowing to be done and soil is drying out rapidly, several mornings this week it was frozen about an inch deep. Numerous forest fires at present. Feed getting scarce on many farms on account of long feeding period and it will be quite a while before cattle can be turned out. Main highways are already filled with tourists. Prices: wheat, $1.65; corn, 80c; oats, 45c; hay, $20; straw, $15; butter, 35c; eggs, 30c.—H. E. H., April 21.

Cape May County, N. J.—Spring is very late. Development of fruit buds delayed about three weeks. Two nights ago there was a slight freeze but not serious enough to injure peaches or apples. It looks like a bumper crop of fruit this year. Many large farms are not being operated because real estate men have bought them with idea of developing them into lots. Rhubarb and asparagus getting big enough to sell. Eggs plentiful and selling around 35 cents. Many poultrymen will soon have broilers for sale. Several farmers have spotted out their tomato plants. It is hoped that the farming industry will have an exhibit in the Sesqui-Centennial and at the Camden Exposition, where the county is putting on an exhibit. Several of the roadside market owners have joined the New Jersey Roadside Market Association. The poultry association is making plans to celebrate National Egg Day. The Kiwanis Club of Wildwood plans to hold a banquet at Cape May Court House with the idea of talking over farming affairs with some of the more influential farmers in Middle Township and making plans for keeping in closer touch with the farmers and their problems.—S. W. S., April 28.

Columbia County, Pa.—We have had spring-like days. Last week the thermometer registered ten and sixteen above zero in different parts of the county. Very little oats sown and ground was very dry until Saturday, the 24th, when a good rain came. Not in many years has there been so much loss in baby chicks, and hatcheries thruout the county report poor hatches and low vitality in those that do hatch. Local poultrymen have the same experience. Old chickens have brought good prices. Market prices as follows: wheat, $1.60; oats, 50c; potatoes, $3; eggs, 28c.—J. H. I., April 26.

Dauphin County, Pa.—Temperature for first three weeks of April far below normal but is now near normal. Grass fields are still quite brown and bare. Grain fields in poor condition. Leaves and blossoms just starting to make their appearance. Most ground for oats has been plowed and much oats sown. Not much corn ground has been plowed. Some potatoes planted. Acreage of potatoes will be less than last year. Pigs are very scarce and high in price this spring. Much improved road will be built by the county and state this year. Work has been started on these roads. Prices: oats, 50c; corn, 78c; wheat, $1.60; eggs, 30c; butter, 60c.—I. F. M., April 24.

Gloucester County, N. J.—The first asparagus was cut Saturday, when Eli Heritage and Son at Richwood shipped one crate. The return of cold weather Sunday has again retarded the crop. Hot beds and cold frames are looking fairly good. In many the plants are small. Moles have done quite a little damage in sweet potato beds. Fruit appears to be all right. Apple buds will soon show pink. On some Stayman trees the buds appear to be soft and watery. These are few and far between. Brown rot has developed on two varieties of peaches in the Glassboro district. Spraying is being tried out now, to control the disease. There are still plenty of apples in cold storage and it now looks as if will take until the middle of June or later to clean up the fruit. Farming is on a conservative basis in the county this spring. There is no big acreage of any crop, unless it might be sweet potatoes, and the increase is likely to shrink before the crop gets in the ground and develops.—A. K., April 26.

Lawrence County, Pa.—Strong, high, cold winds almost daily, but sunshine of which we have had so little. Frosty cold nights so far. Tree pruning and spraying mostly finished and farmers who have work well in hand are plowing sod. Pasture will be late. Rain and warm weather needed. Grain in the ground looks badly. Owing to long continued season of feeding many hay mows are empty. Potatoes bring almost any price the producer sees fit to ask. Feed for cattle high. Wheat, $1.60; oats, 47c; ear corn, 40c; butter, 55@60c; eggs, 38c. The demand for spring pigs far exceeds the supply. Good fresh cows are in demand, prices high.—M. L. V., April 21.

Northumberland County, Pa.—April has been cold and dry. Altho spring opened late over half of the plowing is done and some oats have been sown. Wheat and grass show little growth yet. Many fields on which snow drifts and ice lay are spotted and much wheat has been winter killed. Lewis and Turbut Townships received the area test for tuberculosis this month with 121 reactors being found. Dairy cattle and spring pigs scarce and high in price. Wheat, $1.60; corn, 65@70c; oats, 37c; potatoes, $2.50; poultry, 28c; eggs, 26@28c; three per cent milk, $2.—W. C. G., April 24.

Salem County, N. J.—Potato planting is completed and everybody is busy plowing for corn. The potato acreage has again been reduced and it is estimated at about eighty-five per cent of last year. There would have been a larger acreage planted if seed had been available. Much seed was sold last fall at what growers felt was a good price but this spring the price was about double that received in fall. The seed supply was so short that many farmers skimped on stocks of potatoes which went into storage to plant in August for next year's seed. There is an increased interest in poultry. Egg prices have been good and poultry high. Hay is short. Many dairymen are buying hay to feed their cows. Some have turned out to pasture and the grass is hardly two inches high. The tomato acreage will undoubtedly be increased, even tho the price is low and many of the growers have not been able to get contracts.—E. M. B., April 26.

Snyder County, Pa.—Have been having ideal spring weather of late. Farmers very busy plowing for corn and oats. Some are sowing oats. About half oats is sown. Farm sales are over. Good prices were realized. A big fruit crop is expected. Markets: wheat, $1.68; corn, 70c; rye, 85c; buckwheat, $1.60 cwt.; butter, 45c; eggs, 24c; lard, 18c; bacon, 18c; chickens, 24c.—S. D. D., April 27.

Somerset County, Pa.—The sugar season did not last long but was very good. Roads in pretty good shape. Not much rain the last few weeks. A good many forest fires. Schools having eight-month term are closing. Farmers busy plowing and getting ready to sow oats. Grass seed very high. First class clover $22.50 bu.; timothy seed, $4.50; hay, $18; eggs, 25c; butter, 40c; onion sets, 12@15c lb.; oats, 50c; wheat, $1.60; veal calves, 10c, live weight, delivered.—H. W. B., April 21.

Facts about the Corn Borer

(continued from page 3)

lake may become a center from which millions of moths may be blown into all parts of Pennsylvania, the Pennsylvania Department of Agriculture is making strenuous efforts to effect a cleanup of all corn stalks, tall stubble and other remnants before May 15th. Shortly after that date the moths will begin to emerge. There is no way to stop them once they get their wings, hence the hurry about the spring clean-up.

The farm machinery companies are spending large sums of money to help with the fight on the borer. One of the largest concerns refuses to sell a corn binder to anyone within fifty or sixty miles of the borer quarantine line in Ohio unless the machine is equipped to cut the stalks close to the ground. When the whole stalk, clear to the ground, is cut up into ensilage, the borer hasn't a chance.

For the benefit of Corn Belt farmers plans are being made for a machine that will cut the ripe corn at the ground, husk out the ear, and shred the stalk, leaves and husks into such fine bits that any borers present will be destroyed.

Parasitic enemies of the European corn borer have been imported into the United States and released where the pest is numerous. Some of them have later been found at work killing the borers, but some of the leading entomologists don't expect them to be of any great importance. A clean system of farming is the only positive control method.

There are several interesting and somewhat bewildering sidelights on the borer situation. The pest is thought to have been brought into this country on shipments of broom corn, from Hungary, to broom factories near Boston, Massachusetts, Schenectady, New York, and along Lake Erie. Each of these places became the center of an area of infestation.

For some unaccountable reason the borer attacks many plants in the eastern section, altho it confines itself to corn in the lake area. In the vicinity of Boston it has attacked beets, celery, beans, potatoes, dahlias, gladioli, and some weeds. Mr. D. J. Caffrey, who is in charge of corn borer investigations of the United States Department of Agriculture, reports a considerable decrease in borer damage last year in the Boston section. The widespread destruction of crop remnants is thought to be responsible for this improvement.

Near Schenectady the borer has existed for some time, but it hasn't spread much and seems to do little damage. The system of farming followed may have something to do with that.

In Hungary, the native haunt of the European corn borer, it does some damage, but is kept under reasonable control by the application of the measures recommended for Pennsylvania.

Last week we spent some time discussing the borer with Director Hadley of the Pennsylvania Bureau of Plant Industry, and Dr. T. L. Guyton, chief entomologist, who are directly concerned with the borer fight in Pennsylvania. They don't predict what the borer will do, but it is disquieting to hear them tell about full grown corn stalks that can be broken with a flip of the finger, and about the plight of some Canadian corn growers.

Corn borer damage. These stalks aren't fit to be used as fodder.

Doctor Guyton told us about one man who had a beautiful thirty-acre corn field of which he was especially proud. He cultivated and weeded until it was in tip-top condition. But the borers were at work in those thrifty-looking stalks. When they finished there wasn't enough corn on that thirty-acre field to support one pig.

Feed Market Situation

FEED prices averaged practically steady during the week ending April 29 altho dealers who had small amounts of feed on hand were more anxious to sell. Pastures were becoming available slightly further north and were influencing demand for feeds but the small amounts available in nearby positions helped to maintain a firm tone in prices. The advance in the hay market had a firming influence but prices of feed grains worked slightly lower during the week.

Wheat feeds were barely steady with shorts and middlings weaker than bran. Prices in the East were practically unchanged and demand for small lots continued urgent. Output was again small as flour trade held draggy.

Light production of linseed meal again caused a firm market for this feed at most points, even at a widened price difference under cottonseed meal.

Cottonseed meal averaged slightly higher, altho domestic demand was only fair. Export buying was active earlier in the week but demand from this source has recently fallen off. A larger proportion of prime meal has recently been available on account of improvement in the seed crushed and the reduction in the lower grades has caused a slightly firmer market for them.

Corn Feeds Rule Easier

Corn feeds ruled easier. Offerings have been fully equal to current needs. Production was reduced at Chicago on account of repairs to a plant there. Trade reports indicated that production of hominy feed was curtailed slightly at some points but the offerings of this feed were fully equal to the limited demand at most markets.

Alfalfa meal prices were again slightly higher on account of limited offerings. Sales at most markets were being made from dealers' stocks as the recent advance in alfalfa prices and the light stocks available had made production less profitable.—United States Bureau of Agricultural Economics.

Blizzard Ensilage Cutter feeding itself—fast as 2 men can unload!

see it Perform!

You actually see the Blizzard doing its work, through views taken from the motion picture. You see Fordson running it—two men throwing corn off the load—Blizzard feeding itself—you see it elevating over 125 feet.

WRITE FOR CATALOG

Users pronounce the new enclosed Blizzard the best yet. It is the perfected result of 50 years' experience. Here's what they say: "It cut our silo filling costs in half." "With old cutter, it took two men to operate tractor and cutter, now one can do it easily." "Best silo filler we have ever used and we have used several kinds." "Runs easier than any cutter I ever ran of the size, almost no limit to amount of corn it will take through." Here's an ensilage cutter built like an automobile—moving parts steel encased. Gears run in oil. It will do more work at lower cost. Get the catalog and all the facts.

Easy Milking

How much easier—and pleasanter—to milk cows that have perfect udders and teats, soft, silky, pliable. No nervous twitching, no kicking or holding back of the milk.

Thousands of dairymen use Bag Balm regularly as their guardian of the udder and teats. For quickly healing sores, chaps, cuts, inflammation, caked bag, bunches, cow pox, etc., it has no equal. In the most stubborn hurts the first application starts quick relief.

Bag Balm is sanitary, pleasant to use and does not taint the milk. Big 10-ounce can of this wonderful penetrating ointment only 60c, at feed dealers, general stores, druggists. If you have trouble getting Bag Balm we will send by mail, postage paid.

BAG BALM

MADE BY THE KOW-KARE PEOPLE

Feed Globe Growing Mash NOW to get EARLY Laying Pullets

Over 400,000 Poultry Raisers Have Proved It

If you want the chickens you are raising this summer to be profit makers for you next Fall and Winter, follow the same method that over 400,000 successful poultrymen have adopted—The Globe Method.

Thousands of dollars are lost yearly by poultry raisers in eggs their pullets could have laid—but did not. This loss is due to the mistaken idea that *any* feed is all right for growing birds.

Don't make that mistake this season—there is a *big difference in feeds*—your birds will prove it to you if you'll feed Globe Growing Mash this summer and see the difference. You'll get faster, healthier growth—you'll have pullets on the nests shelling out the eggs weeks earlier than ever before.

Start feeding Globe Growing Mash when chicks are six to eight weeks old—continue until they are sixteen weeks old. $25.00 to $30.00 worth of Globe Growing Mash fed to 100 birds will bring you $80.00 to $90.00 worth of Fall and Winter Eggs that you will not otherwise get.

Write for Our Free Book "Poultry Profits"

"Poultry Profits" is a 76 page booklet, giving complete information on practical poultry raising. Contains color plates of chick's digestive system—special chapters on Chick Production—How To Get Early Laying Pullets—Selection of Hatching Eggs and other valuable information. Doctor Lipman's Weekly Talk on Soil Fertility Problems

Using Land Plaster

If I manure my corn ground well, which is a good sod, would I use as many 100 pounds of land plaster to the acre as without manure? Would plaster take the place of rock, sixteen per cent? How much would you put to the acre?—J. E. S., Chester County, Pa.

Land plaster will not take the place of acid phosphate, neither is it a corrective for a sour soil. For the latter, use pulverized limestone or hydrated lime. I would suggest that you ask your county agent to test your soil, so that you may know whether lime is needed or not.

In addition to the manure it would be well to use 75 to 100 pounds of nitrate of soda and 300 to 400 pounds of acid phosphate, per acre; or if you prefer, you could use a 4-8-3 fertilizer at the rate of 400 to 500 pounds per acre.—A. W. Blair.

For a Hay Crop

As my clover all froze out this last winter and it will cut me short of rough feed this coming winter, would like to know what to sow for a hay crop. I thought of sowing Sudan grass. —I. J. G., Bedford County, Pa.

If you require rough feed for dairy cows, Sudan grass would not be as suitable as some other kinds of feed. You could, however, mix sorghum or soy beans with Sudan grass and make a very good roughage for dairy cows. If the land has not previously grown soy beans, it would be safer to inoculate for this crop.

Oats and Canada field peas could be put in early—just as soon as the ground can be worked, and would make excellent hay. Should the season be favorable, it might be possible to take this crop off toward the last of June and still have sixty to seventy-five days in which to grow soy beans.

Seeded under favorable conditions about the first of July, this crop of soy beans should be about two feet high with pods set and partly filled by the middle of September. Cut at this stage, it makes excellent hay of high nutritive value.—A. W. Blair.

Food Taken from the Soil

I would like to know how much pant food the following crops remove from the soil: corn, wheat, oats, timothy, clover hay and potatoes.—R. D. E., Somerset County, Pa.

The following amounts of nitrogen, phosphoric acid and potash would be removed by crops of corn, wheat, oats, timothy, clover and potatoes. The weights of these crops are also herewith indicated.

	Nitrogen	Phosphoric acid	Potash	Weight of crop
Corn—Grain	23.2	9.1	5.5	25 bu. 1750 lbs.
Stover	16.0	4.7	22.1	
Wheat—Grain	30.0	12.8	6.0	25 bu. 2500 lbs.
Straw	12.0	3.8	15.0	
Oats—Grain	16.0	6.5	4.8	25 bu. 1250 lbs.
Straw	8.0	2.5	15.6	
Timothy hay	25.0	11.0	20.0	One ton
Clover hay	42.0	10.0	40.0	One ton
Potatoes	21.0	9.0	30.0	100 bushels

—J. G. Lipman.

Prices and Prospects

THE old potato market has improved somewhat during the week ending April 28th. The excessive supplies have been decreased and a better demand resulted. Prices have not advanced in most markets. Pennsylvania round whites sold at $7.50 to $7.75 per 150-pound sack in Philadelphia at the close. Trading at shipping points continued rather slow and in several sections growers were holding for higher prices.

The market for new stock in Philadelphia has been weaker, largely on account of the sharp increase in receipts. Practically all of the offerings have been from Florida but small lots of Texas stock have been on the market. The acreage of potatoes in South Carolina is estimated at 18,720 acres, or an increase of about twenty-six per cent over the estimated acreage of 14,860 in 1925. The crop is making good progress and is expected to begin moving in the Beaufort and Charlestown area about May 15-20th.

White Eggs Advance

Nearby white eggs sold well on the New York market during the week ending April 28 and prices advanced on all grades. Receipts increased toward the close and there was a weaker tendency on average extras, but fancy nearby stock was in demand.

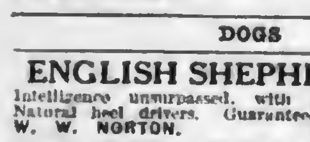
The Philadelphia egg market was steady during the latter part of the week with a fair demand. The relatively high prices and light production delayed the storage movement, but at present large quantities are being stored. Receipts for the week totaled 32,274 cases, of which Pennsylvania supplied 4438.

The feature of the New York live poultry market was the strong demand for light fowl and the neglect of heavy. During most of the week heavy fowl were extremely slow and prices low. At the close this stock sold better largely on account of the limited receipts of light birds. Spring broilers were selling fairly well despite the natural seasonable increase in receipts. Express receipts of fowl and broilers have been light.

Slump in Wheat Prices

Following a week of rising prices the wheat market slumped during the week ending April 24th. Receipts of wheat were heavier and mills in the Southwest were selling part of their holdings on account of the light flour inquiry. Corn prices were generally firm altho receipts at most markets were heavier than the week previous. The late spring has created a better demand for feedstuffs and feed manufacturers were in the market. Oats were lower with only a moderate demand. Receipts were lighter at most markets but stocks continue large.

Good hay was scarce and in demand at most of the eastern markets thruout the week. Ordinary hay continued dull with only a fair demand. Timothy held firm. Prices were forced higher at New York on account of light arrivals. Top grades were firm at Boston and the Pittsburgh market was barely steady in spite of the reduced offerings.—W. R. Whitacre.



Heaves, Coughs, Conditioner, Worms. Most for cost. Two cans satisfactory for Heaves or money back. $1.25 per can. Dealers or by mail. The Newton Remedy Co. Toledo, Ohio.

DOGS

ENGLISH SHEPHERD PUPS Intelligence unsurpassed, with life, grit, courage. Natural heel drivers. Guaranteed. W. W. NORTON. Ogdensburg, N. Y.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HEIFER HAS FIVE TEATS.—I have a heifer about one year old and I find she has three teats on one side and two teats on the other side. I would like to get rid of one teat on the side that has three. Would like to get the one in the middle out. Is there any way to cut out or destroy the teat without injuring the others or the heifer?—N. W. A., Westminster, Md. The first step would be to learn which teat is the outlet of each quarter, then have the extra teat removed while the heifer is dry. This should be taken care of by a competent veterinarian to insure proper handling. The udder is a structure that will not tolerate a great amount of faulty manipulation without the results showing in the milk supply.

COW WITH CAKED UDDER.—What can I do for cows and heifers that have caked bags? It seems as tho the old time remedies have failed me. I have a heifer that will freshen in about ten days and her bag is hard now. She doesn't get any grain of any kind. Hay is all I feed her. Will you please tell me what to do for her?—G. M., Vestal, N. Y. It is the general policy to avoid any heavy ration and to feed oil meal, bran or roots. Moderate exercise should be allowed the heifer. Local applications have very little effect in many instances so that one has to depend upon the regulation of the diet to secure results.

PIG IS STIFF.—I have a fall pig that is stiff and unable to walk. Its limbs appear to be paralyzed and it is unable to even bear its own weight. I feed it wheat and oats mash, also a little turpentine and copperas and have put turpentine on its limbs. It has a real dry bed and when it started to get stiff it was running out in a lot. I would appreciate it very much if you would tell me the cause of this and what might be a remedy.—H. B. C., West Sunbury, Pa. This condition is the result of a lack of variety in the ration. This produces a rachitic condition. Give this pig one ounce of cod liver oil in the feed daily for one to two weeks. Feed a mixture of 100 pounds corn, 10 pounds digester meat and bone tankage, 5 pounds oil meal and 5 pounds ground alfalfa.

MARE IS FOUNDERED.—I purchased a mare recently who had been foundered, I don't know how long ago, and she is stiff and sore in her front parts. Please advise me what to do for her.—G. C. S., Alexandria, Pa. Laminitis or founder is an inflammation of the lamina or sensitive structure of the foot. It may be acute or chronic and usually results in changes in the foot that interfere with locomotion. Relief may be obtained by proper trimming of the foot and shoeing. The toe should be shortened and the shoe fitted with a rolled toe to aid in the "breaking over" of the foot in the regular stride. This animal will not be very useful for road work but may be serviceable for farm work.

HEIFER FAILS TO BREED.—I have a Jersey heifer two years old and cannot get her with calf. Have had her away to breed seven times, beginning last June. She comes in regularly. Can you tell me how to treat her?—N. H. G., Salem, Ohio. Your first step should be to have an examination of this heifer made by a veterinarian with experience in handling breeding diseases and familiar with the anatomy of the reproductive system. The treatment would be based upon the results of such an examination. There may be some definite abnormality which would prevent fertilization and render the animal permanently sterile.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

58 Miles an Hour—
5 to 25 Miles in 8 Seconds—
25 Miles to the Gallon—
at Electrifying New Low Prices

$845

Touring car, f. o. b. Detroit. Subject to current Federal excise tax

OWNERS FIND SURE CONTENTMENT IN CHRYSLER "58" PERFORMANCE ECONOMY AND RUGGEDNESS

Extraordinary speed and power, combined with economical care-free service, continue to win to Chrysler "58" new owners at the rate of 10,000 per month.

Meanwhile, both new and old owners are enthusiastically satisfied with their choice.

This nation-wide endorsement of Chrysler "58" is no mere matter of chance.

On the contrary its sustained speed ability of 58 miles per hour, acceleration of 5 to 25 miles in 8 seconds and economy of 25 miles to the gallon, which have won this approval, are the predetermined result of the most carefully calculated balance, scientific carburetion and gas distribution, plus painstaking Chrysler craftsmanship.

We are eager to give you a thorough demonstration not only of these Chrysler "58" qualities, but also of its riding and handling ease, sturdiness and ruggedness. These, combined with its new electrifying low prices, will convince you that Chrysler "58" is today more than ever the outstanding motor car value under $1000.

CHRYSLER SALES CORPORATION, DETROIT, MICHIGAN
CHRYSLER CORPORATION OF CANADA, LIMITED, WINDSOR, ONTARIO

Chrysler Model Numbers Mean Miles Per Hour

CHRYSLER "58"—*Touring Car, $845; Roadster Special, $890; Club Coupe, $895; Coach, $935; Sedan, $995. Disc wheels optional. Hydraulic four-wheel brakes at slight extra cost.*

All prices f. o. b. Detroit, subject to current Federal excise tax.

All models equipped with full balloon tires.

Ask about Chrysler's attractive time-payment plan. More than 4,300 Chrysler dealers assure superior Chrysler service everywhere.

All Chrysler models are protected against theft by the Fedco patented car numbering system, pioneered by and exclusive with Chrysler, which cannot be counterfeited and cannot be altered or removed without conclusive evidence of tampering.

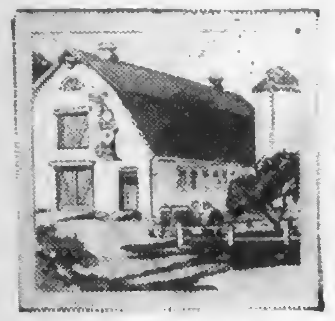
ESTABLISHED 1880
PUBLISHED WEEKLY
(Pittsburgh Market Edition)
Vol. 93—No. 20
PHILADELPHIA, PA., SATURDAY, MAY 15, 1926
$1.00 a year

Summer scenes on the Eastern Shore, where winters are short and spring comes early.

Exploring Delmarvia, the fertile bay- and ocean-bound counties of Maryland, Delaware and Virginia. Page 3.



Barn painted to last
Sherwin-Williams Commonwealth Barn Red is highly durable but moderately priced. Spreads easily. Comes in gray, also. Recommended on the Farm Painting Guide.

Let it rain or shine
Ebonol is a heavy black paint ideal for roofs. Waterproof. Elastic. Does not dry out or crack. For metal, composition or wood.

Keeps furniture beautiful
Scar-not varnish resists heat, moisture and scratches. Dries very hard. High lustre or can be "rubbed down." For painted furniture. Enameloid. Beautiful colors.

Find that Store

LOOK for the store showing the *Paint Headquarters* sign. It has the famous Painting Guide service and can supply the finishes recommended as best for each surface by Sherwin-Williams. At this store you can find out how much material is needed and what equipment will help you get a good job. The store is well worth finding.

The practical and beautiful new FARM PAINTING BOOK is now ready. Send for a free copy.

Pine Trees Sold a Farm

And Gave the Owner's Son an Idea to Work Out

"DON'T know what we'll find at this next place we are going to." The county agent was speaking. "I've never met the owner. He came in the office the other day when I was out. Said he wanted the forester to come see him."

"What's his name?" I asked.

"Hardly know what to tell you. The girl wrote it down on this slip of paper, and here it is."

I looked at the letters on the paper. "Francis K-r-a-w-c-z-y-k," I spelled out. Later we learned that this particular arrangement of letters is pronounced "Krafcheck."

What would you naturally have expected after seeing and hearing that name? Exactly what we did. We were all wrong. Mr. Krawczyk was born in this country, and has lived here the greater part of his life. He is a graduate of two American colleges. He was gassed in the World War, and later served as a recruiting officer for the Foreign Legion. After the war he began the practice of law in Philadelphia. His health broke down, so he pulled up stakes and purchased a farm in Bucks County, Pennsylvania.

But then I didn't set out to give you Mr. Krawczyk's life history, I wanted to tell you about the forestry work which is being done on his farm.

On That First Visit

On that first visit which the county agent and I paid Mr. Krawczyk we went over his farm in detail. We examined carefully all the odd corners and all rough parts found in the fields. For each of these in turn we decided whether the land should be handled as before, or whether it would pay better in trees. In making our decision we took into account the size of the piece, its condition, its location with respect to the buildings, and the ease with which it could be worked. Here our work was simplified for us because the owner did not wish to grow regular farm crops unless the land was really adapted to them. He would not put labor into land of doubtful value.

For each piece of land to be put into trees, we determined the area by stepping it off, or by comparing it with other small pieces nearby, whose acreage was known. At the same time, it was decided what species of trees should be planted in each case.

The entire farm was gone over in this manner and when we were thru, not only did the owner know how many acres he had to plant but also how many trees of each species would be needed.

There still remained the planning of the work of planting so that it could be woven around the other spring work without difficulty. On this farm it was decided that a small number of trees should be planted the first year, with a larger number in following years. The program provided that all the planting would be completed within five years. A consideration of the sources of planting stock completed the job.

To date, 3000 trees, furnished by the State Department of Forests and Waters, have been planted on this farm. They are doing well. Seven thousand will be planted this spring.

Will Remove Poor Timber

Mr. Krawczyk also proposes to improve the stand of timber now on the farm by removing all the poor material, that which is good only for fuel. He will do this gradually, as wood is needed and as time permits.

"How did you get the idea of planting trees and thinning your young stands?" we asked this progressive farm owner.

"From my father, on our Michigan farm, when I was a youngster. On the farm was one piece of sandy land which was good only for growing timber. My father sent away for little pine trees and planted them just as he had seen it done in the old country. They were set in rows and tended as in many places in Europe. They looked fine. There is a dandy stand of pine there now."

"Your father sold the farm?" I asked. "Did he get any better price because of the pines?"

"Did he get any better price? Well, I'd say so. There were twelve acres of land in the plantation. The trees were set in 1905. They were put out seven feet apart each way. That plantation helped sell the farm to this extent—that father got twice as much for his farm, straight thru, as other farms of the same size in that county were bringing. It sure did pay him, and I know it's going to pay me."

We pulled out to go to the next farm on our list. The county agent remarked, "Seems to me I read not long ago where Chief Forester Greeley had said that the people in this country must become 'woods minded' as many people over in Europe have been for a long time. He must have had in mind the very thing which this Krawczyk family has, and shows, 'woods sense,' which looks to me like nothing but a special brand of common sense."—C. R. Anderson.

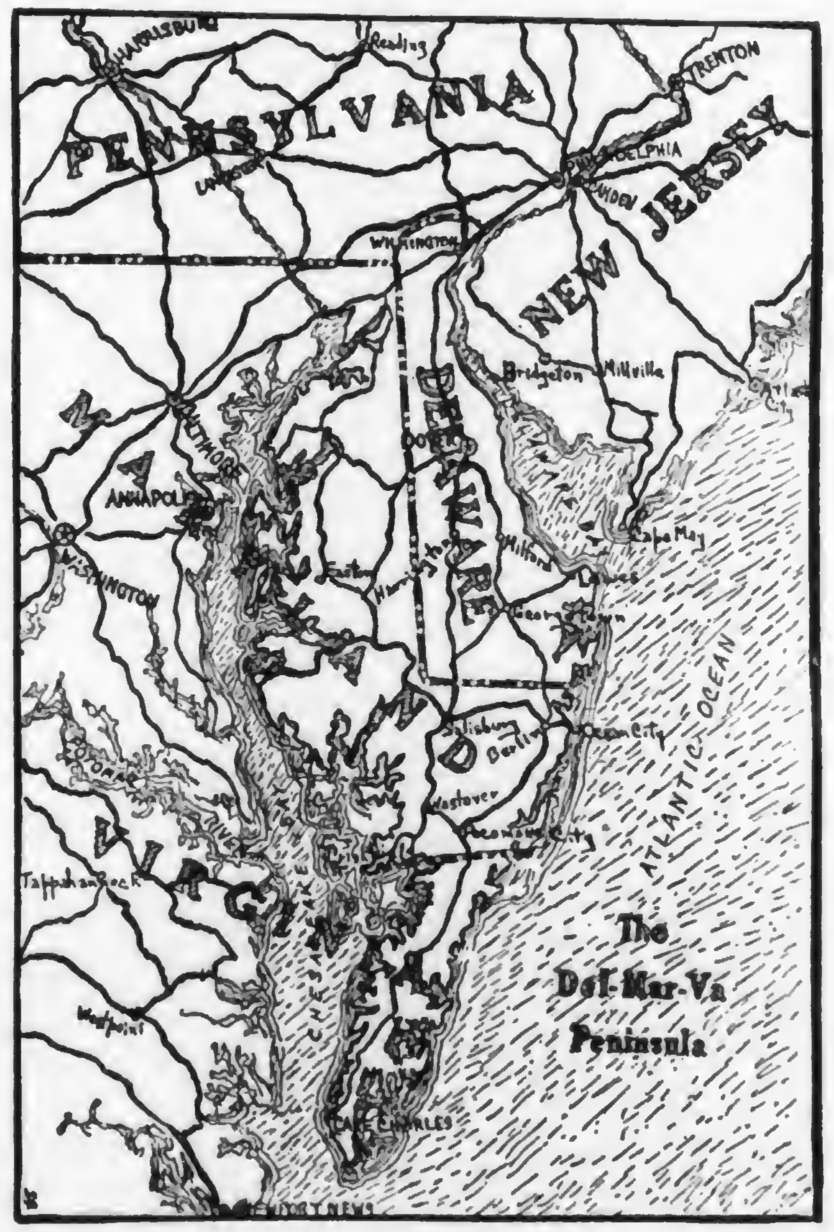
Exploring the Delmarvia Peninsula

A Pennsylvanian Discovers the Land of Strawberries, "Sweets" and Loblolly Pine

By C. L. WHITE



AWAY back in the days when we were going to school we once heard a conversation or read something that gave us a vague impression that the Eastern Shore of Maryland would be a fine place to live. It was not until long afterward that we learned what was meant by the "Eastern Shore." But down thru the years we kept hearing and reading little things that made us want to visit this unfamiliar section.

The Eastern Shore, we were told, is only a few hours' automobile ride from Pennsylvania, yet, in many ways, it is almost as different from Pennsylvania as Florida. We read about great trainloads of fruits, berries, early potatoes, and melons that are shipped to northern markets weeks before our own crops are ready. We heard about streams and ponds that make a fisherman's paradise. We saw magazine articles about little steamboats that ply lazily in and out along the coast, discharging and taking on freight at numerous ports.

But it was only a week ago that we had an opportunity to visit the Eastern Shore and check up on these vague impressions we had been collecting thru the years. We had been in the territory before, but never down into the real heart of it, away from the influence of the cities that dominate its northern frontier.

Is Almost an Island

The map on this page shows the general outline and location of the peninsula which is generally called the Eastern Shore. Our school geography used to define a peninsula as "a body of land almost entirely surrounded by water." The author of that definition must have had this peninsula in mind when he wrote it. The "almost entirely" fits this body of land perfectly, for while it takes in practically the whole state of Delaware, nine counties of Maryland, and two of Virginia, its only connection with the mainland is a little neck of land on the north, barely twenty miles wide.

Except for that connecting link, this whole territory is surrounded by water,—Chesapeake Bay, the Delaware River, Delaware Bay and the Atlantic Ocean. Possibly we could call it all an island, for even that neck of land is severed by a ship canal connecting the Delaware River with upper Chesapeake Bay. We'll waive technicalities, however, and call it what Nature intended it to be, a peninsula,—the Del-Mar-Va Peninsula. That name, and the more convenient "Delmarvia," are derived from the names of the states among which the peninsula is divided,—Delaware, Maryland and Virginia.

Our map indicates that Philadelphia, Lancaster, Harrisburg, and all sections of southeastern Pennsylvania are quite close to Delmarvia. Just how close they are may be realized when we say that we took a ten o'clock morning train from Philadelphia and arrived in Salisbury, Maryland, far down the peninsula, only four hours later.

In Philadelphia, which has an earlier season than the most of Pennsylvania, we were seeing the first signs of spring. The trees were beginning to show green and a few of the very earliest blossoms were out. But long before we got as far south as Salisbury, we found the trees very green, and saw dozens of peach orchards in full bloom. In many of the orchards the blossoms were nearly gone. Pear trees were a mass of white, and the grass had made considerable growth.

At Salisbury we found Mr. Edwin C. Totten, who spent a day and a half showing us as much of Delmarvia as could be seen in that time. He was a most congenial and helpful guide.

It would require many long articles to relate all of the interesting things we saw and learned while we explored the central part of the peninsula with Mr. Totten. Only a few of them can be mentioned here, but they will serve to show what the country is like.

Hundreds of Miles of Good Roads

The two things that caught our attention first were the good roads and the loblolly pine trees. There are 1346 miles of improved highways on the peninsula and nobody knows how many thousands of those loblolly pines. The pines grow very rapidly and we saw many of them being cut for lumber. Where clumps of them have been left between fields they make a very striking feature of the landscape, with their tall, straight trunks, branchless except near the top.

The country is flat, or gently rolling, so there is no problem of grading connected with road building. In many places the highways stretch away for miles, perfectly straight ribbons of concrete. The improved roads are so numerous that we could indicate only a very few of them on the map on this page.

The soil is sandy or sandy loam for the most part, tho in southern Delaware we saw black soil similar to that used extensively for celery growing in Tioga County, Pennsylvania.

The principal crops in the central part of the peninsula are peaches, apples, strawberries, sweet potatoes, cucumbers, tomatoes and cantaloupes. There are numerous canneries which pack vegetables in immense quantities.

In the vicinity of Salisbury the growing of strawberry plants for shipment to all parts of the United States is a big industry. We visited two growers who ship millions of (to page 25)

On an Eastern Shore farm. This picture shows over sixty acres of strawberry plants. There were thirty acres more behind the camera.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The optimist recalls his happy yesterdays, enjoys his hours today, and confidently expects that tomorrow will be worth while.

Dogwood on Time

LATE as this season seems to be in many ways the blossoms of the dogwood have opened almost on schedule time. Peach trees, apple trees and other domesticated fruits have shivered and kept within their coverings two to three weeks longer than they do ordinarily, but the bloom of the dogwood,—the true prophet of warm weather and corn-planting time,—makes its schedule.

The Last Call

WE MAKE a final appeal to all Pennsylvania voters to go to the primary election on May 18 and vote for decent representative candidates. No matter how pressing your work it is not so important as this duty. Vote for a candidate for Governor whose reputation is above reproach and who is not aligned with gangs and looters. Vote for a United States Senator who you know will fairly represent the ideals of the honest, law-abiding citizens of the Commonwealth. A man in either place who would seek to lower these standards, or whose reputation is smirched with ballot-box scandals, or who is committed to aid the efforts of law-breakers would be an everlasting disgrace to the voters of the state.

Farm Relief

AGAIN Congress is engaged in a struggle over legislation intended to relieve the inequalities between agriculture and industry. Again the Corn Belt farmers and the city press are arranged on opposite sides of the question. In the main, eastern farmers are not taking sides on the question, partly because they are not directly interested in the particular bills, and partly because they are more or less influenced by the city papers they read. . It is a pity that both sides cannot sit down together and talk the matter over in an unselfish spirit and try to arrive at a solution of the problem. That there is a problem cannot be denied. Neither can it be denied that it will ultimately affect all lines of business. Any industry so big and so essential as that of agriculture cannot remain continually on a financial basis below that of other business without affecting all sooner or later. The wealth and energy devoted to producing the nation's food and raw material must be recompensed equally with other lines of business.

Unfair Competition

REPORTS from New York indicate that the recent action of the health authorities there in shutting out certain shipments of western milk and cream has had a favorable effect on the milk market. When Canadian milk and cream are also barred, further improvement in market conditions should be noticed. Artificial protective measures are not needed to enable eastern milk producers to keep their markets, but they cannot be expected to observe a set of sanitary regulations at considerable expense unless all of their competitors are subject to the same regulations. Milk producers in the North and West should be strictly barred from eastern markets if the health rules governing production in those sections do not conform to standards in force in our own territory.

A Matter of Education

THERE has been an enormous increase in the production of oleomargarine in the United States during recent months. A great number of people seem to have the idea that it is real economy to buy almost anything that is cheaper in the place of real butter. Now, out of fairness to the oleo manufacturers, nothing can be done to them as long as they sell their product for what it is,—a cheap substitute. Neither can force be applied to the consumer to protect him from his own false idea of economy. He has the right to spread tallow or axle grease on his bread if he wants to.

Aside from the enforcement of laws to prevent deception, the only way dairymen can protect their markets is to educate the public to the real value of butter in the diet. Butter producers must follow the example of the orange growers, the breakfast food manufacturers, and others, who have been successful in convincing the consumer of the importance of having certain kinds of food in the diet. The men who advertise butter will have a remarkably interesting story to tell, and in telling that story they will be rendering valuable service to the cause of better living.

The Strike in England

REGRETABLE as is the colossal strike in England, it must not be forgotten that there are two sides to the question. Ever since the war closed the government has maintained a system of doles by which it has paid out a fixed amount each week to families having no income because of unemployment or loss of the bread winner in the war. The Prime Minister set May 1 as the date on which these subsidies would cease to be paid. Knowing that this would bring thousands to the verge of starvation the coal operators aided by the government's Coal Commission decided that it would be a good time to reduce wages and lengthen the working hours. Naturally, the miners' union objected and called a strike. Other trades, seeing the trend of events and knowing that the object was to break all labor unions, walked out in sympathy. The news of the strike sent to this country tries to leave the impression that the strike is a rebellion against the government and civil liberty.

We are not apologizing for the strikers nor voicing sympathy with the general principle of strikes as a remedy for settling differences, but we do feel that the American people are entitled to know both sides of a controversy.

Let Hoover Do It

RADIO is being dragged into politics. By common consent, the Department of Commerce, under Secretary Hoover, has been granted authority to control and regulate the radio broadcasting stations. But such a state of affairs will continue no longer, if a certain group of congressmen have their way. These patriotic (?) gentlemen fear that Secretary Hoover will use his power over the radio industry to the special advantage of the Republican Party. So the congressmen propose, in a bill now awaiting action, to take the control of radio out of the Department of Commerce and give it to a special commission of five men, each of whom will draw a salary of $12,000 a year. The President will be given the power to appoint these five men. And the five men will, of course, find good and sufficient reason for hiring a great staff of assistants, advisers and office help.

We fail to see just why this proposed commission, appointed by the President, would be any less partisan in its administration of radio affairs than the Secretary of Commerce, who is also appointed by the President. Neither do we understand why this work, which has thus far been carried on efficiently and economically in the Department of Commerce, should be turned over to a costly and untried commission.

Some action by Congress is needed to clear up the situation arising out of the recent court decision denying the power of the government to control radio wave lengths. But to go farther and to create a lot of new jobs for officeholders is contrary to the spirit of economy which should mark these times of high taxes.

Farm Pictures Wanted

THIS is an age of pictures. People of all ages, adults as well as children, enjoy getting their education and entertainment thru the eye. The summer season is the ideal time for taking pictures, both because of the better lighting and the greater number of opportunities. We are glad to receive good, clear photographs of farm scenes which will instruct, amuse or entertain others, for reproduction in Pennsylvania Farmer. Pictures of men and women who have done some noteworthy thing, together with a short story of their accomplishment, will be welcomed. Mail the pictures flat between cardboards and put your name and address on the back. All pictures accepted and used will be paid for, and those not used or usable will be returned if stamps are enclosed.

Illinois Cattle Barred

THE Pennsylvania Bureau of Animal Industry established a quarantine against cattle from Illinois, effective May 1st. The object is to protect Pennsylvania dairymen from unscrupulous dealers who have been offering for sale cattle of questionable health. The quarantine does not apply to cattle from accredited areas or accredited herds when they are accompanied by an official certificate showing that they have been properly passed by Illinois authorities. Framed as it is, the quarantine order works hardship on no one except the crooked dealers who would take advantage of dairymen who are trying to replace their condemned cattle with healthy animals. It is fortunate for livestock men that the state authorities have the power to take drastic action in cases like this.

Washington Letter

FARMERS' WEEK IN WASHINGTON.—The week ending May 8 was farmers' week in Congress. Debate on three farm relief bills reported by the House Agriculture Committee, was begun in the House May 4 and continued four days. It was claimed that a combination of Middle West and southern representatives had been formed to put thru the Haugen Corn Belt committee bill, creating a federal farm board with a $375,000,000 fund to handle crop surpluses. But the debate did not disclose any evidence of such a coalition. The attitude of some southern members, however, as voiced by one of them, was to the effect that they would vote for the bill if they could be assured that the President would veto it.

FARM BUREAU DIVIDED.—President Coolidge was told by Chester H. Gray and Russell F. Bower, of the American Farm Bureau Federation, that their organization preferred the Haugen bill to the Tincher bill which has the administration backing. The latter would create a federal farm commission with a $100,000,000 revolving fund from which loans would be made to cooperatives. The President, however, did not indicate any change of mind.

A letter from L. B. Palmer, president of the Ohio Farm Bureau, made public in the Senate, said: "I just attended a meeting of representatives in the Middle West, farm bureaus' presidents and secretaries, and the division of opinion was sufficient that they failed to pass any resolution indorsing the present Haugen bill. I also have a wire from one member of the legislative committee of the American Farm Bureau Federation . . . urging Middle West leaders to accept the principles of the Capper-Tincher bill."

JARDINE BELIEVES IN TINCHER BILL.—Secretary of Agriculture Jardine is insisting that the Capper-Tincher bill will pave the way for a better stabilization of prices than farmers have ever before enjoyed.

B. F. Yoakum, author of the Curtis-Aswell bill, speaking in opposition to the Haugen bill, says the farmers do not want a law for getting further into debt. They want a law under which they can make money to get out of debt.

Much opposition in the House to both the Haugen bill and the Tincher bill centers around the provision for selection of a federal farm board by the farm organizations. It is declared to be revolutionary and unconstitutional.

APPROVE IRRIGATION PLANS.—Notwithstanding strong opposition to federal aid in expanding our agricultural area, coming from all parts of the country, congressional committees continue to report favorably on western irrigation projects. An appropriation of $450,000 for the Hillcrest extension of the Boise irrigation project in Idaho has been reported favorably by the House Committee on Irrigation and Reclamation.

MANY ALIENS DEPORTED.—A big increase in deportations of undesirable aliens is reported by Harry E. Hull, commissioner general of immigration. There were 44,000 aliens admitted to the United States in March, and during the same month 12,439 left the country. During March 938 undesirable aliens were deported. Of these 145 aliens were of the criminal class. The remainder entered this country without the formality of passing thru a regular immigration station, or were likely to become public charges. It is said that there never has been a time when so much care was taken to keep out undesirables as at the present.

FOREIGN-BORN WORST OFFENDERS.—Assistant Secretary of the Treasury Andrews says prohibition administrators have found that the preponderance of law violators comes from the foreign-born element. General Andrews also says that a house-cleaning such as Representative Holaday's bill for deportation of certain classes of aliens contemplates, together with a more effective border control, should relieve the United States and the states individually of the support of many aliens in prisons and similar institutions.—E. E. Reynolds.

Harrisburg Letter

UNEASY ABOUT FRUIT.—Considerable uneasiness is manifested in reports coming to Harrisburg about fruit conditions following the frosts in southern counties. The northern part of the state has not yet started to have spring and there is comparatively little damage, but a few warm days so advanced vegetation that drops in temperature unquestionably did damage. The effort now is to find out how much.

A SEASON OF PROMISES.—Approach of the May primary date has brought out much discussion of state policies. There have been various proposals advanced for betterment of life in the country, improvement of marketing, extension of highways, abatement of pollution and other things. Candidates for state nominations have been so much in the public eye that the legislative candidates have not been heard of and their attitude on certain of these things might be interesting.

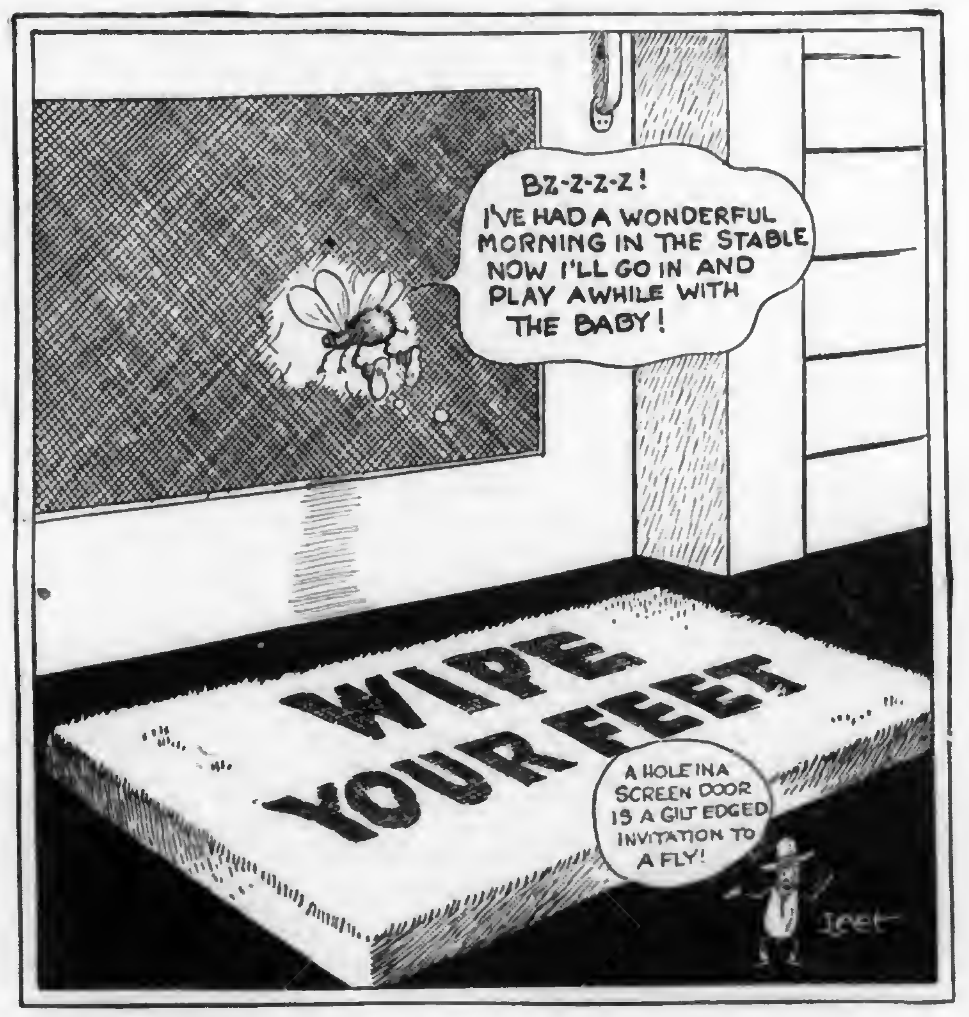
MORE HATCHERIES.—Plans of the State Fisheries Department contemplate the bringing back of the old days when the state had a number of hatcheries, but on a more extensive scale so that fish may be made available for streams and ponds on farms. It is proposed to ask the next legislature to make appropriations for building and to finance the operation out of proceeds of fish licenses, which have been increasing in number. One new hatchery is to be built this year.

MAY CLOSE STATIONS.—Threats of state officials to close up gasoline stations in remote sections of the state unless owners come to time and take out licenses are having effect. Dozens of persons who had ignored the law are writing for permits. There is no charge for permits, but the issuance of such papers means the state has a better check on gasoline sales.

WANT STATE TO ACT.—Officials of the State Game Commission are giving serious consideration to proposals that game protectors kill off the surplus deer causing so much damage to farms, orchards and gardens in various parts of the state, instead of leaving it to sportsmen. The subject has been under discussion so much that it has gotten back to the place where many farmers object to doing the killing and the special seasons do not suffice to thin out the animals. Just how the game officials could handle the matter is hard to say, as they have not been successful in that line in the past. It is probable there will be a renewal of the meetings of the last two years after the coming deer season. Animals have been reported very numerous in southern counties.

MONTGOMERY A LEADER.—Montgomery is declared to have more hens working in commercial egg and chicken producing plants than any other county. There has been a constant increase in the number of flocks, both on farms and in the commercial establishments and it is estimated there are almost 17,500,000 hens in Pennsylvania, an increase of 3,000,000 in four years. There are more than 2100 flocks containing over 500 hens each.

HUNTING BROWN ROT.—Some attention is being given to the brown rot in fruit by state officials. There will be a systematic effort to get information on its appearance so that data on how to fight it can be sent promptly. The campaign against the peach yellows which was so successful last year has been ordered renewed.—Hamilton, Harrisburg.



BZ-Z-Z-Z!
I'VE HAD A WONDERFUL MORNING IN THE STABLE NOW I'LL GO IN AND PLAY AWHILE WITH THE BABY!
WIPE YOUR FEET
A HOLE IN A SCREEN DOOR IS A GILT EDGED INVITATION TO A FLY!

The unwelcome visitor

New Jersey Letter

FARM ELECTRIC SURVEY.—The State Board of Agriculture thru its Bureau of Statistics and Inspection is now starting a survey of conditions in New Jersey with the view of encouraging the expansion of the use of electricity. The state officials have been studying the rapid progress made in the West toward supplying electric current to farmers at reasonable cost. A similar opportunity should be available to New Jersey farmers, the board maintains, and purposes to find the facts of the situation upon which action may be taken.

FEWER FARM SALES.—If the transfer of farm ownership, for farming rather than for real estate purposes, is any criterion, New Jersey farmers are better satisfied this year than in some seasons. In the northern part of the state only about half as many farms have changed hands as last year. A Warren County auctioneer stated recently that only thirty farm sales were conducted, whereas the usual sales run fifty to sixty. Greater use of farm machinery in the state within the last year has taken care of the labor problem to a considerable extent and lessened the desire to sell out.

STATE FARM PROGRAM DEVELOPING.—The state committee, representing the farm bureau, the State College and the State Department of Agriculture, in charge of developing a long time program for New Jersey agriculture, recently reported substantial progress. The preliminary work now under way has consisted of studying records on farm practice, sales, market and transportation statistics in order to define a trend of agricultural procedure. Director Baker, of the committee, states that early reports by the committees now working may be ready by next fall. Among the major committees are those for the development of poultry, dairying and fruit.

SEPTEMBER LEGISLATIVE CONFERENCE.—The executive committee of the New Jersey Federation of County Boards of Agriculture at its spring session decided to hold a legislative conference of all farm groups in the state next fall. This is in line with the customary procedure of the last few years. The meeting will probably be held the last week in September.

AIDING PEACH INDUSTRY.—The twelve-year work in experimenting on new peach varieties at the State College farms has now defined the better varieties for New Jersey conditions. The College is shipping the new stock to every county in the state.—B.

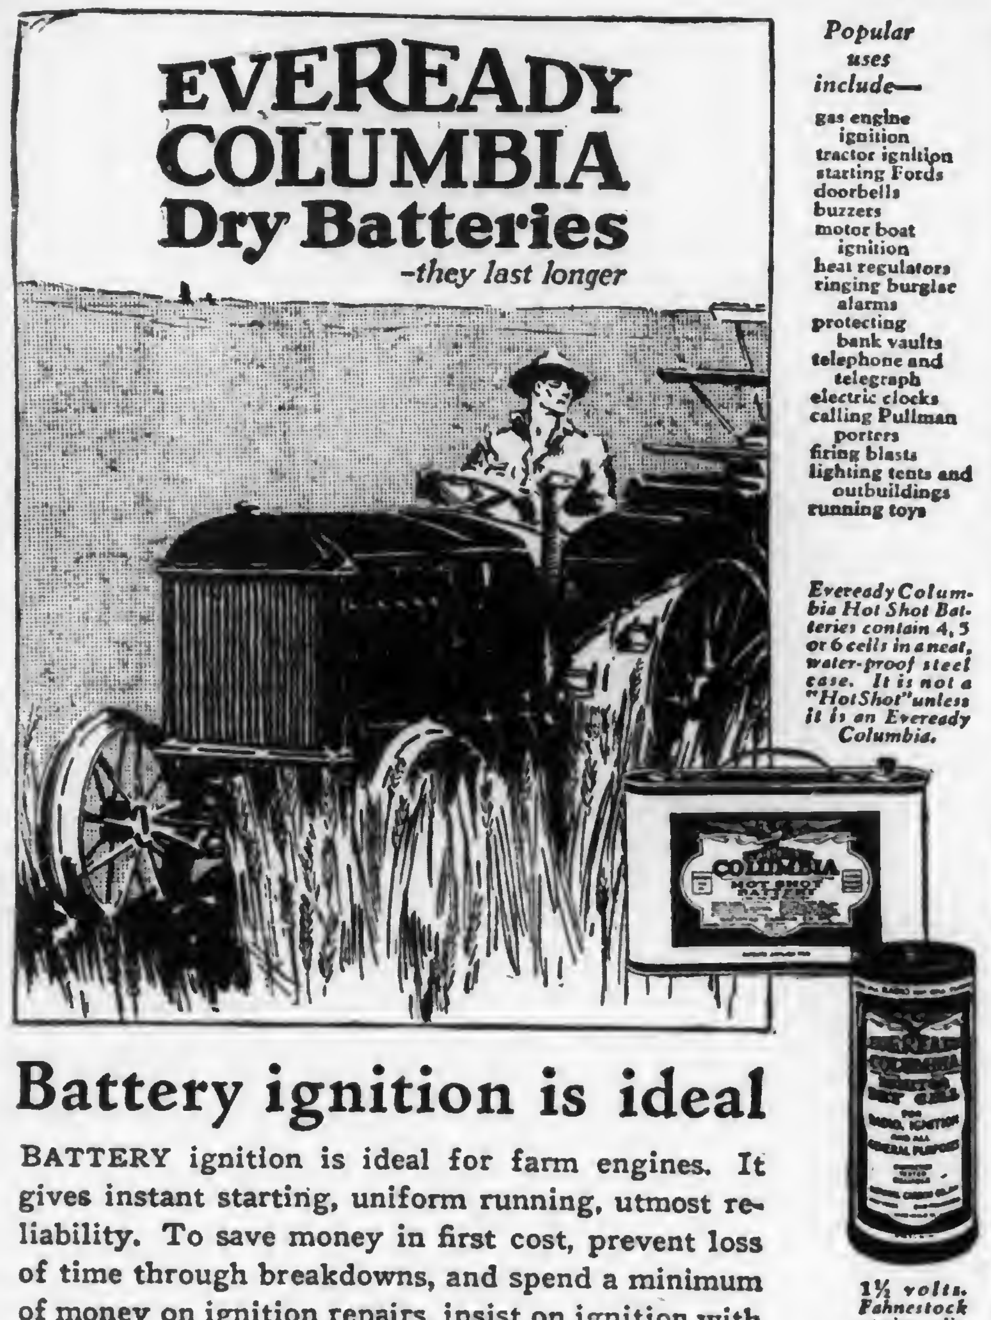
New York Letter

WOMEN SUPPORT COOPERATION.—At a recent district meeting of the State Federation of Home Bureaus a resolution was passed urging local groups to make a study of cooperative marketing and farm economics, as one way of securing more money on which to operate the farm home. Women were urged to attend meetings of cooperatives as delegates, also to serve as secretaries, and to contribute generally to the cooperatives of their training in analyzing situations, their training in leadership, in efficient business methods, and to lend a social aspect to meetings of farmers. "The purely commercial aspect of such meetings has failed to hold the men who should be most interested," it was said.

RURAL READERS. — Dr. Paul Paine, librarian of the Syracuse Public Library, and a leader in library extension in the state, has returned from a meeting of the Library Extension Institute. His county is to be the first in the state to make a definite attempt to increase the use of books in rural sections. Plans are under way and the board of supervisors and superintendents of rural schools are to be interested if possible in advancing a cooperative plan between city and county in the loan of books. The home bureau is also back of the project here, as it has been in one other county where a real county library has been established.

RURAL SCHOOLS PROGRESS.—Opposition to rural school progress seems to have been largely removed with the killing of last winter's bills to devitalize the legislation of 1925. The state department has repeatedly announced its policy of not enforcing consolidation excepting where the great majority of voters want it, and where it is a question of wealth's refusing to share its financial advantages with neighboring districts. Under the new law the district schools may be continued so long as the people in the districts so desire, all the time getting their usual state quota, and having the advantage of establishing a central school where older pupils may receive tuition free of cost, such central school to get state aid that has heretofore been unavailable. This plan seems to leave objectors without an objection. Rural people are being urged to acquaint themselves with the law as it now stands, and to spread their information so as to correct the mass of misinformation which has been set afloat by selfish interests.—M. G. Feint.

EVEREADY COLUMBIA Dry Batteries
-they last longer



Popular uses include—
gas engine ignition
tractor ignition
starting Fords
doorbells
buzzers
motor boat ignition
heat regulators
ringing burglar alarms
protecting bank vaults
telephone and telegraph
electric clocks
calling Pullman porters
firing blasts
lighting tents and outbuildings
running toys

Eveready Columbia Hot Shot Batteries contain 4, 5 or 6 cells in a neat, water-proof steel case. It is not a "Hot Shot" unless it is an Eveready Columbia.

1½ volts. Fahnestock spring clip binding posts on the Eveready Columbia Ignitor at no extra cost

Battery ignition is ideal

BATTERY ignition is ideal for farm engines. It gives instant starting, uniform running, utmost reliability. To save money in first cost, prevent loss of time through breakdowns, and spend a minimum of money on ignition repairs, insist on ignition with Eveready Columbia Dry Batteries. Eveready Columbia Hot Shots, in their water-proof steel cases, can't be short circuited by water. There are millions of fat, hot sparks inside, every one with a kick like a mule, regardless of engine speed. They give instant starting without spinning. There is an Eveready Columbia dealer nearby.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

THE weather man is evidently trying to re-popularize a song, "See-saw," which was much in vogue a generation ago. At least, he has been see-sawing the temperature from 35 degrees to 85 degrees and back again with sudden and furious energy and great regularity. Two days ago we almost sweltered in a temperature of 85 in the shade, while this morning it was down to 34. The peach and cherry trees are in full bloom but the soil and air is so dry that no frost formed. I cannot understand how it is that asparagus grows as it does, but we cut it twice during the first four days of May.

✤ ✤ ✤

OUR colored man insists that we should plant more potatoes, "seeing that they are bringing such big money." But then he does not have to buy the seed and fertilizer. We planted ten rows, each 1000 feet long. In each row we put four dollars worth of seed and nearly two dollars worth of fertilizer. When to this is added the cultivation, spraying and digging, those rows will have to shell out several dollars merely to pay expenses. They may do it; but then, again, they may not and we are not eager to take the chance.

✤ ✤ ✤

THE rye sown last fall as a cover crop is making rapid growth in spite of its unpromising start and bare appearance this spring. Our only fear now is that it may become too tall before we can get it plowed under. Rye and vetch should be plowed down before it becomes stemmy and woody, else it is long in decaying and keeps the water from below from coming to the surface soil. One advantage of plowing it with a tractor is that the broad wheels flatten it down and enable one to tuck it under very nicely.

✤ ✤ ✤

NEW potatoes from Florida are costing half as much as strawberries in March—forty cents a quarter-peck, or twenty cents a quart. Yet, a market official tells me that about the normal amount of potatoes is arriving and being sold; that the unusual price of four dollars a bushel for old potatoes and six dollars and forty cents for new potatoes does not cause much lessening of demand. It seems that as long as people have money to buy what they want to eat they will buy it no matter what it costs,—providing they cannot get it any place for less.

✤ ✤ ✤

WE PLANTED some beans and sweet corn on the third day of May, even tho the weather is unfavorable for these crops. The cost of planting them is small and the loss will not be great even if the seed rots, while if it turns warm they may be a good risk. We have found that in the average season, the tenth of May is as early as it is safe to plant them in this vicinity. Lima beans, however, will not stand any hardship. The soil and weather must be permanently warm after they are planted or they will promptly rot.

✤ ✤ ✤

IN ACCORD with our resolution never to put fertilizer together in the row again, we thoroly mixed them before dropping the four-dollar-a-bushel seed. Also, we made sure to get them planted deep enough this year.

✤ ✤ ✤

UNDER the stress of necessity I mounted the tractor to plow the other day and found it not so easy as plowing with old Dobbin and Jerry. Altho the furrows had been struck out nice and straight, I could not keep them that way. Son said I worked too hard at it. The tractor will follow the furrow if left alone, but I, to be sure of it, would keep steering it until I would get it out one way or the other, and then I could not get it straightened up in time. I was reminded of a remark which a neighbor wag made about the coal which a young man was digging in our old neighborhood. The coal was exceedingly fine and powdery and the wag said the young man put too much work on it. However, I shall tackle it again and try to curb my inclination to turn the steering wheel so much.

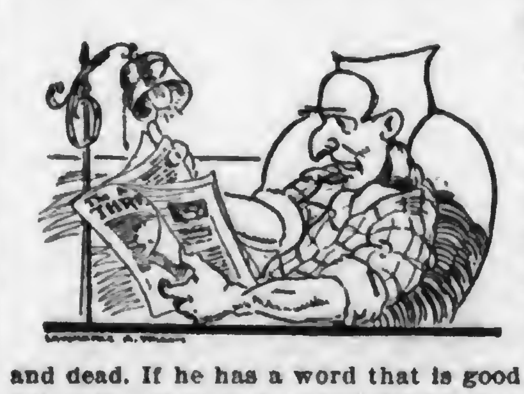
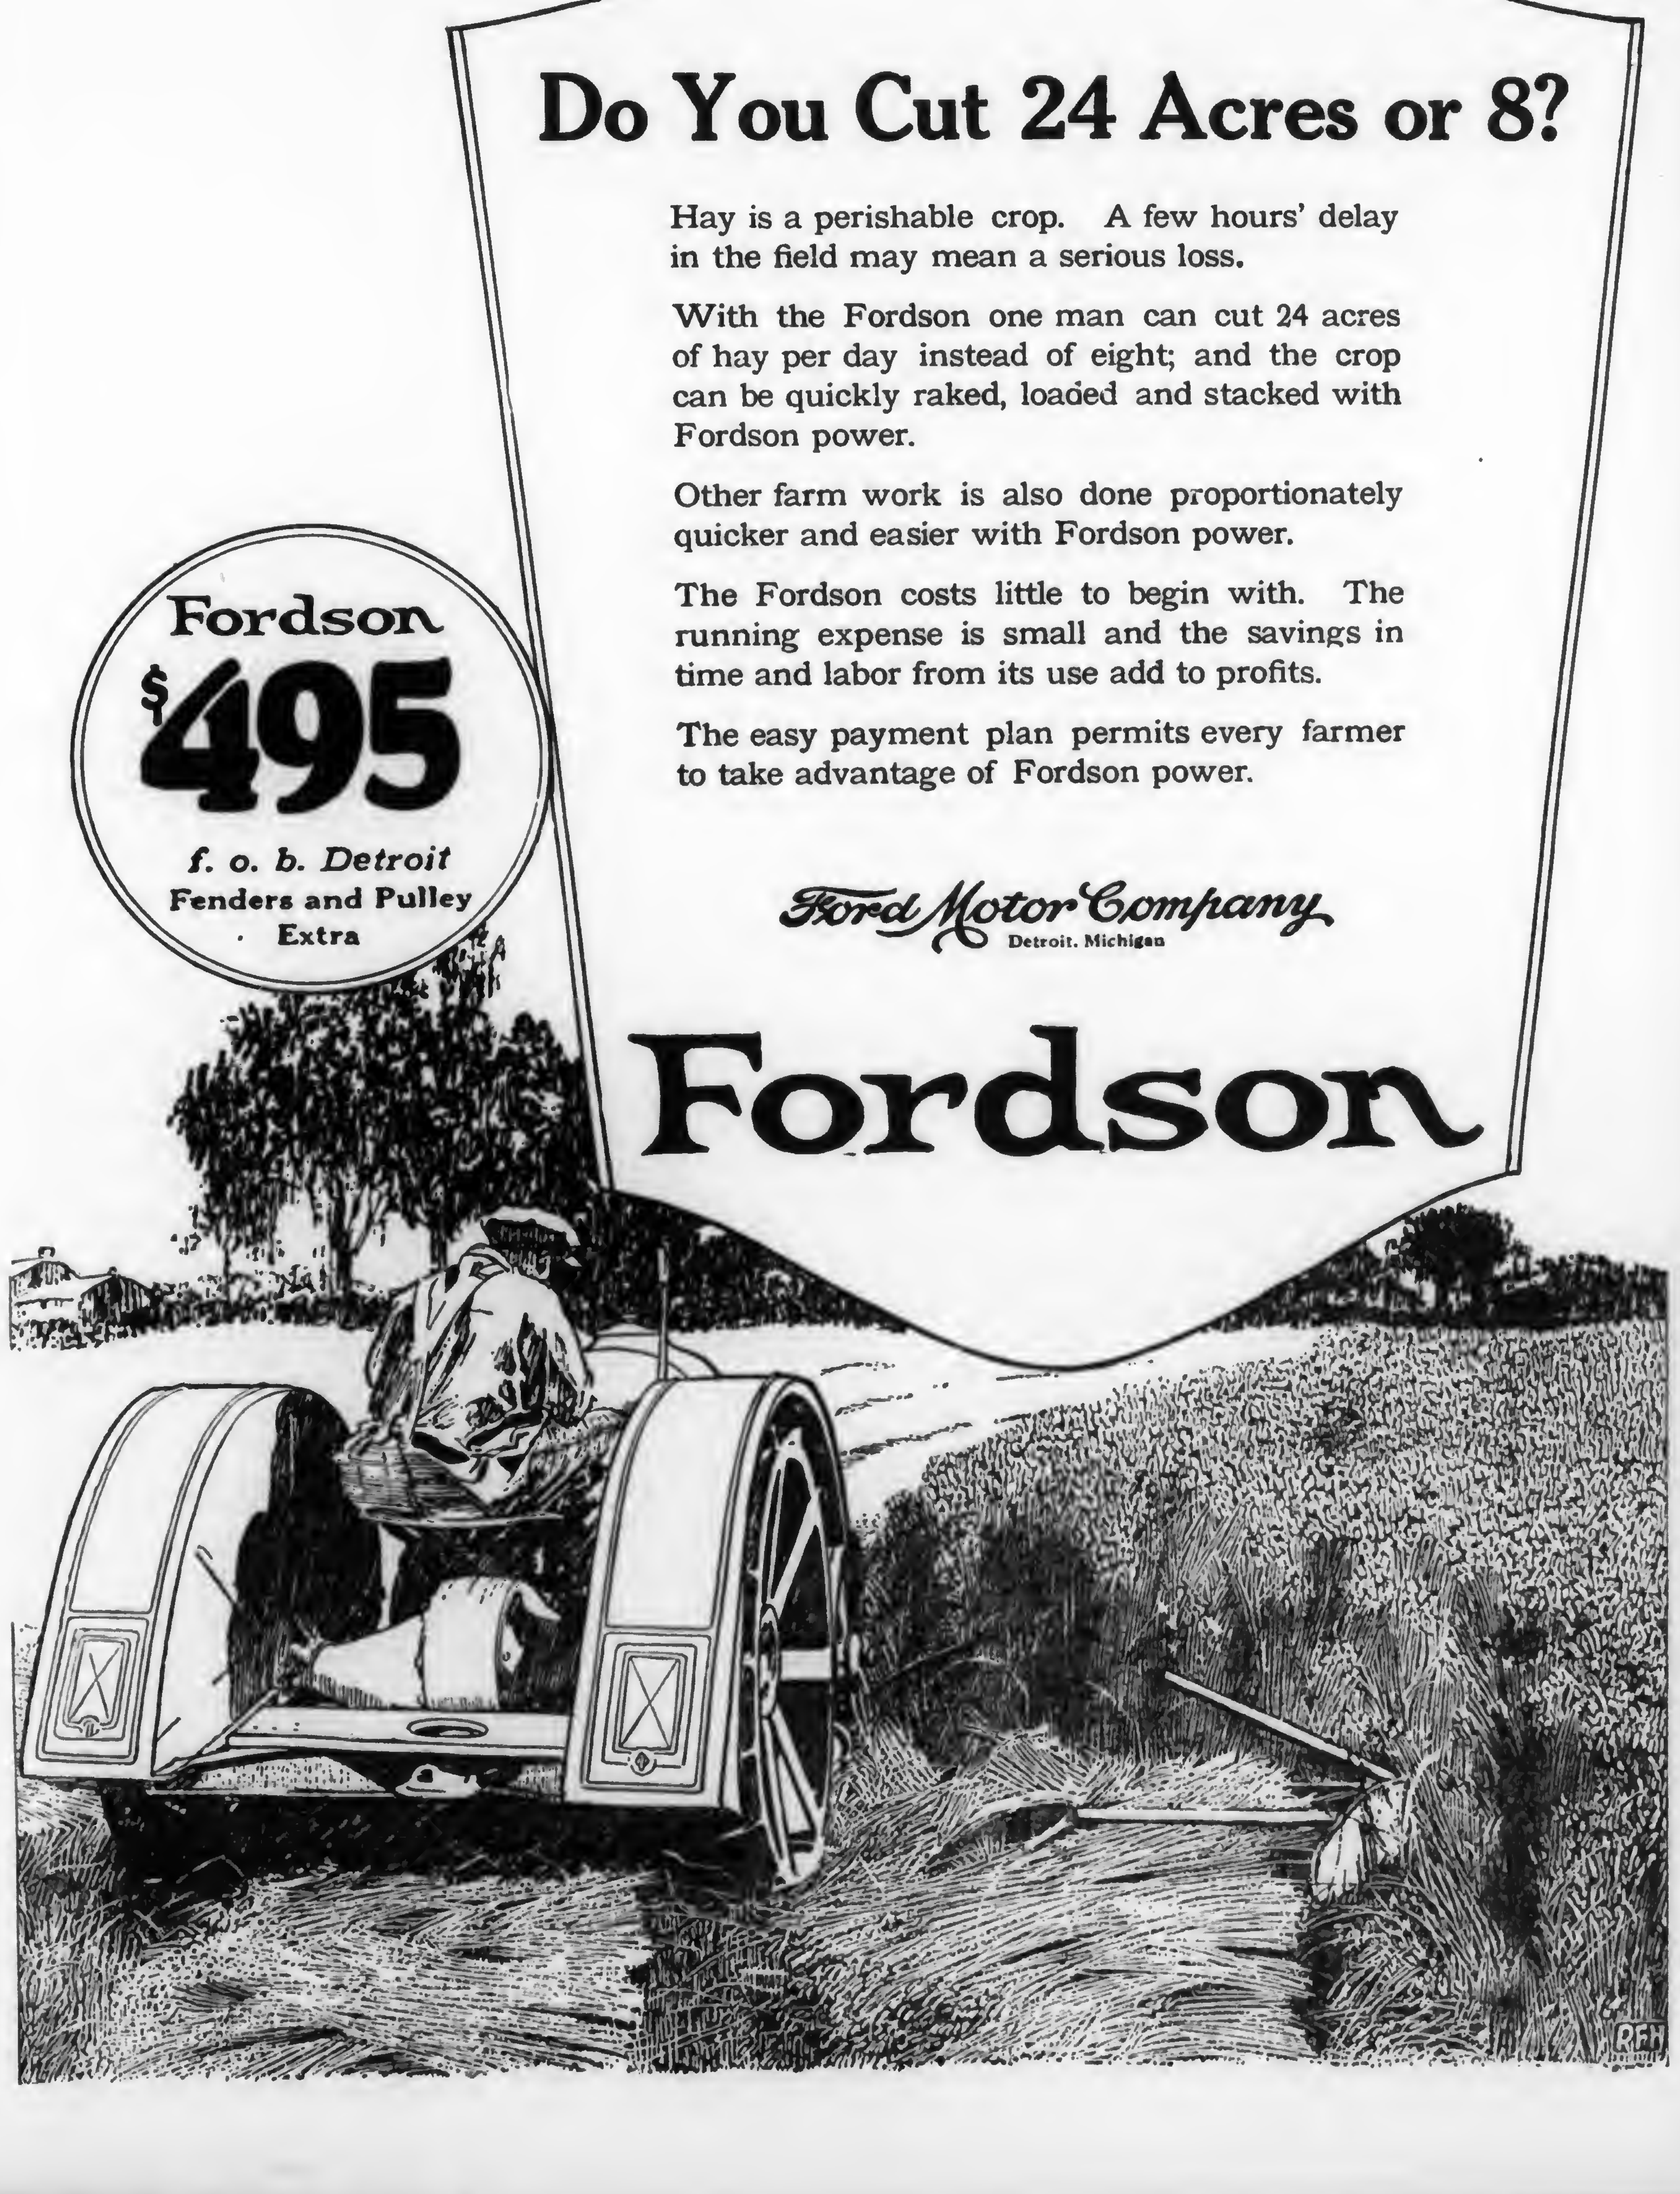
THE CHEERFUL PLOWMAN

Farm Journals



OH, I WANT to know what the other man does whose job is akin to mine, whose life is lived in the hum and buzz of my own familiar line! Oh, I want to know what he thinks about as the pulleys go 'round and 'round, and I want to hear of his hope and doubt, how his grief and joy are found! Oh, I want to know what he has in mind for the season that's just ahead, and I want to know where he went in blind in the season that's gone and dead. If he has a word that is good for me and a point that I ought to get, then I want to hear and I want to see what the fellow can give, you bet! And, I want to give to my fellow man a glint of the things I learn, as I come and go, as I work and plan as the wheels and gearings turn! A dollar saved, or a job made light by a twist or a knack I've found, is a boon for him in his daily fight, an aid in his daily round.

This journal here which I've read for years, a boon to the earnest man, is a clearing house for my hopes and fears, for my coming and going plan! It's a clearing house where the other lad who is raising the nation's grain may come to me with his good or bad, with his story of loss or gain! No, I wouldn't farm for another day if the game were a solitaire, for there'd be no kick in the earn and pay if I couldn't divide and share! This journal, then, is a welcome chain that links us, plan on plan; I am bound to my kin in his joy and pain, I'm a part of the other man!—J. Edw. Tufft.



Do You Cut 24 Acres or 8?

Hay is a perishable crop. A few hours' delay in the field may mean a serious loss.

With the Fordson one man can cut 24 acres of hay per day instead of eight; and the crop can be quickly raked, loaded and stacked with Fordson power.

Other farm work is also done proportionately quicker and easier with Fordson power.

The Fordson costs little to begin with. The running expense is small and the savings in time and labor from its use add to profits.

The easy payment plan permits every farmer to take advantage of Fordson power.

Ready

When You Are Ready

Why not banish forever the long costly wait to get your threshing done this year.

Let your Ford dealer show you how easy it is to own a Belle City New Racine Thresher and how it may be paid for out of the savings on your crop.

There is no better grain separator made than the Belle City New Racine. It is built especially to operate best with your Fordson.

Rice; beans, peanuts and every kind of small grain and seeds can be separated perfectly with this outfit.

Sold only through Fordson dealers. Write for illustrated catalog and information on our deferred purchase plan.

Garden and Truck Crops

W. T. TAPLEY, Staff Contributor and Adviser

Don't Be without a Vegetable Garden

IT IS very easy to have a garden for vegetables. Few farms and homesteads are too small to set aside land that can be used to grow something that will be worth the picking. A backyard corner; a quarter acre; packages of seed, soil and seed, is it easy to put the two together, stand by, helping a bit by stirring the ground, shooing away the chickens, adding a little water now and then? Can we thus easily get the huge yields that the books say we should? Can we put that little seed in the ground and three months or so later harvest a tender, melting, vitamin-containing, crisp, delicious, sweet, golden, nutty, mild, creamy, pungent, spicy, mellow, savory vegetable? We can, but perhaps the way is not wholly clear.

Obstacles to Overcome

I sometimes wonder if there can be as many obstacles to overcome in manufacturing a screw driver as there are in the manufacture of a carrot. For both we probably pore over catalogs looking for the raw materials, steel, wood or seed. Do we buy from the cut price mill or store; do we purchase on price alone? If so, what kind of screw driver can we make or what kind of carrot will we grow? What should influence our choice of source of supply?

We have our raw material, seed that the catalog said was the best that ever filled an envelope. That seed is now in the ground. Now for the troubles, cows, crows, hens, mice, or a flood, or a cyclone. If we get fifty-one per cent germination, that is the majority and our seed company is elected. If the plants do grow, watch the army of bugs, for every kind of vegetable there is a different bug, chewing and sucking. Entomologists call the plant on which the bug feeds the "host plant." With the coming of summer we expect plenty of visitors.

The part of the plant left by insects is weakened by the struggle and ready to cooperate with diseases. Of these, there are not many, only four or five for each of the more important vegetables and one each for those not so important. Animals, dry weather, wet weather, wind, flood, lifeless seed, poor soil, stones, weeds, insects and diseases are some of the troubles that beset every gardener. But it is the nature of things to grow. Seed is made in order that there may be continuance of life. The soil is made to hold the plant up, to hold the food; the moisture is for the plant juice; the sunshine for warmth and the shower to freshen. The gardener has many more friends than enemies. He need not be on the warpath, but only defend and ward off those who attack.

Let us, answering the urge, plant a garden, knowing that if we do our part we shall reap our reward. Our table will be graced by fresher and tastier vegetables than can be found in any market or store.—W. T. Tapley.

Treat the Seed

ONE dollar spent for seed treatment meant ten bushels more of potatoes an acre in tests on Monmouth County, N. J., farms last year.

Seed disinfected with mercuric chloride before being cut yielded 203 bushels an acre, while fields planted with seed not so treated developed scab and rhizoctonia, and the yields were only 193 bushels an acre. On one farm there were twenty-eight per cent more clean tubers from the disinfected seed than from the untreated and the average for all farms was 11.7 per cent increase.

Similar tests in Middlesex County gave an average yield increase of seventeen bushels an acre in favor of the treated seed.

The Radishes That Are Wanted on the Philadelphia Market

THE market gardener or truck farmer has to consider many factors when selecting the varieties of vegetables he is to plant. The variety should be suited to the soil and climate in which it is to be grown. Resistance to disease and productiveness are important, but often the mistake is made of selecting a variety not popular with the trade which is to buy it.

The marketing of vegetables is perhaps a greater problem than producing them but the farmer who grows the variety that his market desires at the time it is wanted and prepares it attractively has gone a long way towards solving his marketing problems. Different markets and classes of trade have varied preferences but they also have many points in common. Quality, honest measure and a well packed product count strongly on any market.

Philadelphia is an important outlet for radishes but it shows a preference for certain types. The Scarlet Globe and the White Globe are the most popular of the early varieties, and while one color may bring a premium over the other it is due largely to the relative supplies of each. If there is a plentiful supply of the red and a light supply of the white on the market the white will bring the better price. It seems at present that the red type has a slight edge on the white.

The scarlet radish with the white tip, or the monkey face, as it is known by the trade, is not wanted on this market. The red and white long type is only in moderate demand, altho some classes of trade desire it. A radish with a top of moderate size is preferred to one with a large or skimpy top.

The leaves should be of a good green color and the radishes in the bunches should be uniform in size. The Arkansas radishes that are coming on the market, and are commanding the best price, contain thirteen to fifteen radishes in a bunch. The large bunch is popular both with the wholesale dealers and the housewife and the growers will find that it pays to put a few extra radishes in the bunch.

Radishes should be washed so that they are bright and clean. The white variety when grown on some soils is unattractive unless washed well and brushed. Care should be taken to avoid pithy radishes for they detract from the value.

A uniform number of bunches should be packed in the container. The bushel hamper and the five-eighths basket are commonly used for the home-grown stock. Winter radishes do not sell very readily in Philadelphia and there is only a limited outlet for this stock.—W. R. Whitacre.

CRUSH BOSSISM IN PENNSYLVANIA

Nominate a Governor in Whose Ability and Integrity You Can Place Complete Trust

JOHN S. FISHER

Paints and also Disinfects Dries White

You Can Mix It Today and Use It Anytime

That's one of the big advantages—one of the great conveniences of Carbola, the Modern Disinfecting Whitewash. Once mixed with water, it's always ready to use. It will not deteriorate after mixing as ordinary whitewash lime does.

Carbola comes in powder form and it contains a powerful disinfectant. Mixing with water quickly turns it into a smooth-flowing white paint that can be quickly applied with spray pump or brush. It dries a clear, even white and it will not blister, flake or peel off.

Try Carbola. Use it to paint and disinfect the interiors of your poultry houses, dairy barns, sheep sheds and hog pens. A pound makes enough paint to cover 100 square feet. Use the dry powder as a dusting powder on your poultry and other live stock. It will help to keep your animals free from lice and mites. It will help to prevent the start and spread of contagious diseases among your stock.

Your hardware, feed, seed, poultry supply or drug dealer has Carbola or can get it. If not, order direct. Money back if you're not satisfied.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

At the Maine State Pomological Society Meeting

AT a recent meeting of the Maine State Pomological Society, J. H. Waring brought out the advantages of having wide angle crotches in the training of young apple trees. These are much stronger and do not split as readily as narrow crotches, where the branches separate from the trunk at an acute angle. Tying out the scaffold limbs the first year is practicable, especially with varieties like Delicious. There should be at least nine inches between the scaffold limbs on a young tree, for they grow together as the limbs become larger.

Growth of Citrus Industry

R. W. Rees called attention to the rapid growth of the citrus industry, and its effect on the demand for apples. The production of citrus fruit has increased fifty-seven per cent during the past five years; while the production of melons, which also compete with apples, has increased fifty-four per cent in five years. Both are real competitors of the apple, and have the advantage of organized publicity and sales service back of them.

Mr. Rees is of the opinion that competition from the Pacific Northwest will not increase during the next ten years, and probably will decline ten per cent, which will mean 5000 cars less than in 1925. A large part of this decrease is due to the immediate necessity for removing filler trees. Many orchards were planted 18 x 18, or 20 x 20.

In the future the Northwest will send to eastern markets more Delicious and Winesap, and less Rome, Newtown and Spitzenburg. The tendency in the Northwest, especially in the Yakima and Hood River Valleys, is to substitute pear-growing for apple-growing.

Mr. Rees warned eastern growers that the Sebastopal, California, territory will greatly increase its output of Gravenstein, which will come on the market at the same time as our Duchess, and will be likely to outsell the Duchess, being superior in quality to that variety. He can see no future for early apples, except in limited quantity for local markets, in the territory north of New Jersey and southern Pennsylvania.

Just as the Carmen and other early peaches have been crowded out of this territory by southern Elbertas, so will early apples from the South and West crowd out the northern grown product.

A new source of competition that is likely to be felt in the smaller markets of Pennsylvania is the recently developed plan of shipping mixed cars of early apples, prunes and peaches from California to eastern markets that are too small to handle straight cars of one fruit. It is interesting to observe that Idaho has changed from the bushel box to the round bottom bushel, for its Jonathans.

Mr. Rees congratulated New England apple growers on their increasing success in meeting western competition. In Boston, New England grown McIntosh has practically crowded the western grown Jonathan off the market, and there has been a big decrease in the amount of western boxed apples of other varieties shipped to that market.

Adoption of Standard Grades

In Pennsylvania and adjacent states, including New York, the value of the United States Standard Grades for apples, and of shipping point inspection is now so generally recognized that there is no sentiment whatever for the promulgation of state grades that are different from the federal grades.

Apparently New England has not progressed that far as yet. There seems to be considerable jealousy between the different New England states in this respect, and an attempt now being made to adopt uniform grades for all New England has indifferent support.—S. W. Fletcher.

Prices and Prospects

THE first Pennsylvania asparagus came into the Philadelphia market during the latter part of the week ending May 1st. There were only small lots offered but the quality was good and it brought a premium over the other stock on the market.

Spring work and bad roads resulted in lighter arrivals of hay at most markets and prices ruled steady to firm during the week ending May 1st. Top grades continued to be in best demand but the lower grades moved readily at markets where good hay was scarce. Timothy was generally firm.

The grain market was unsettled thruout the week. Weather conditions in both winter and spring wheat areas, together with the foreign situation were the chief unsettling factors. The Liverpool and Buenos Aires markets declined 4c to 5c per bushel. The corn market declined, altho the demand was fairly active at most markets. Oats was lower and rye was weak with future prices declining about 3c.

The New York live poultry market was generally firm during the week ending May 5 with light stock selling well. Heavy stock was slow and prices were forced lower.

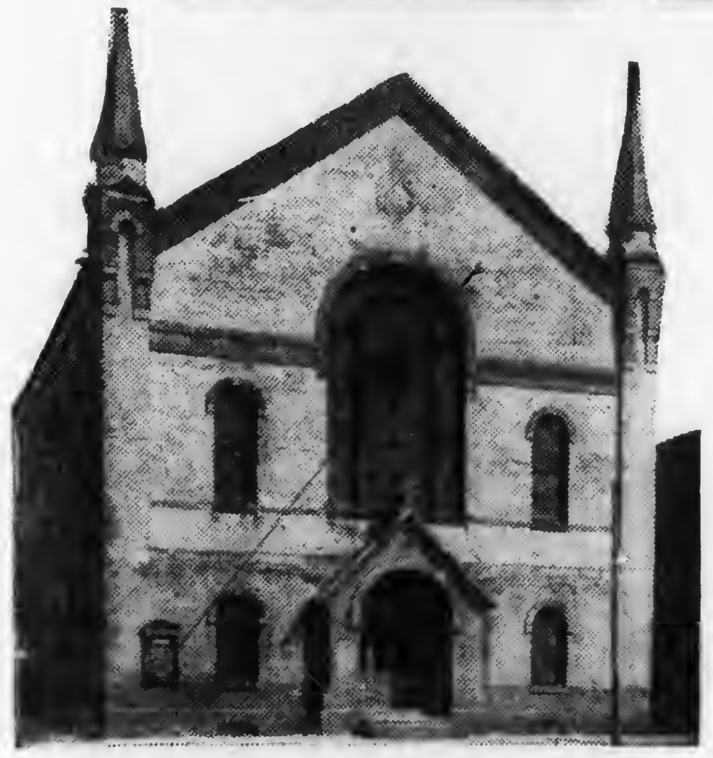
Egg receipts increased in New York during the week and country costs in some sections have declined slightly. Nearby eggs have been more plentiful and trading has slackened. Fancy grades of nearby stock were in demand but medium grades and pullet eggs show a weaker tendency.

The Philadelphia egg market has generally held firm, but there was a slight decline at the close.

The old potato market in Philadelphia has been irregular during the past week. The early part of the week was marked by slight price advances and a stronger tone but toward the close there was a lull with slight price reductions. Offerings of Pennsylvania stock were lighter but there were ample supplies of Maine Green Mountains.

Most dealers seem to feel that altho stocks on hand are being rapidly diminished, the offerings on the market are ample for trade needs. Growers in many sections are optimistic and are holding for still higher prices. Some people seem to feel that high prices have decreased consumption, but with unloads in many markets running about the same as last year, their ideas do not appear to be well founded.—W. R. Whitacre.

What is Vareism?



The Abigail Vare Methodist-Episcopal Church, Third and Morris Streets

The Abigail Vare Public School, Third and Morris Streets

IT is the habit, in many political campaigns, to sling mud at the other fellow. It is always a dirty trick—and is invariably an acknowledgment of impending defeat on the mud slinger's part.

"Vareism" has been used by the political opponents of Congressman William S. Vare as a term of reproach. Let the pictures on this page tell you a truer story.

What the word "Vare" stands for is shown here in stone and brick and mortar—monuments of unselfish endeavor directed for the good of the community.

The E. H. Vare Junior High School, 25th and Wolf Streets

There is the Abigail Vare Methodist Episcopal Church, dedicated to the memory of Congressman Vare's mother—and across the street from it is the Abigail Vare Public School. Then there is the E. H. Vare Junior High School, and the George A. Vare Playgrounds.

A Church—a School where the foreign-born are Americanized—a High School that better fits the boys and girls for the duties that await them—a Playground where sunshine and fresh air give new life to pent-up children in congested districts.

These four contributions to a community's well-being represent what "Vareism" really means!

Congressman Vare refuses to answer the vindictive slurs directed against him. And so it devolves upon his Campaign Committee to publish this advertisement telling you just exactly what "Vareism" means, and to ask you on May 18th next, to vote for the man who, when he is Senator, will work to his uttermost to

Eastern States Farmers' Exchange

A GOOD START

Newtown, Penn. Farmers Pleased with Service.

In April a 24 ton car of Eastern States feeds and Eastern States ingredients was distributed among the farmers of Newtown, Penn. For May the Newtown farmers ordered a 37.8 ton car.

Charles T. Carter, of Yardley, reported, after using the Eastern States feeds exactly as he had used feeds of similar protein analysis, that his herd gained 20 quarts per day. Albert E. Dunn, also of Yardley, reported that his herd gained 10 quarts a day, though he used Eastern States feeds just as he had other feeds of the same protein analysis.

It was such performances as these which made it necessary to order 13 tons more in May through the Eastern States Farmers' Exchange than in April. Considering that the pasture season is at hand this increase is most significant. It is significant also because rations of equal protein analysis could be purchased at Newtown when the orders for the May car were being secured at considerably lower prices than the prices quoted by the Eastern States Farmers' Exchange. To farmers who have watched the development of the Eastern States Farmers' Exchange, however, this increase was to be expected.

Throughout the territory served by the Eastern States Farmers' Exchange the quality of the ingredients shipped as ingredients and used in the mixed rations of the Eastern States Farmers' Exchange receive unqualified praise. The ingredients are not purchased to sell attractively in a highly competitive grain market where price is the primary consideration. The ingredients, on the contrary, are selected strictly from the feeder's viewpoint—to secure for the feeder quantity production and body maintenance at the lowest possible cost.

The Eastern States Farmers' Exchange from the outset has realized that price and quality go hand in hand and that only when quality is of the best and price is moderate quality considered does the price factor properly enter into consideration of the value of the trade. Since the Eastern States Farmers' Exchange purchased its own mill at Buffalo a year ago the Exchange has been able to control price and quality in addition to formulae. It has demonstrated at 596 shipping stations in New England and Delaware during 1925 that this control is of great value.

Pennsylvania and Maryland farmers who are now coming in contact with Eastern States feeds are learning what a cooperative can accomplish for them when it selects at their own mill the quality of the ingredients it ships to them and prices them on a fair basis.

At the request of groups of farmers in Maryland and Pennsylvania the Eastern States service is now being offered to them and will be extended—as it has been extended gradually throughout New England and Delaware—as the farmers themselves ask to be included in the movement.

For information on the activities of the Eastern States Farmers' Exchange fill out and return the accompanying coupon.

Feed Analysis Figures

In the Pennsylvania feeding stuffs report of analysis of samples of feed, the analysis given is for protein, fat, fiber only. Why not carbohydrates also? Are they not important? I suppose the figures given mean crude protein, fat, fiber. Should they not be for digestible or true? Would it not be better to inform the consumer as to the digestible rather than the crude content of the feed only?—W. H. B., York County, Pa.

I presume the reason that the percentage of carbohydrates in feeds is not mentioned in many cases is because the law in Pennsylvania does not require this. In the early days of the feed law enforcement, the first thing was to arrive at some knowledge of the character of the feeds. The protein at that time was considered the most essential. This was later followed by guarantees for fat and fiber as well as for lists of ingredients in the case of feed mixtures.

Fiber, of course, makes up a part of the carbohydrates and the nitrogen free extract percentage is usually arrived at by calculation. The percentage of water and ash in most feeds runs about twelve to fourteen per cent. When this amount is added to the percentages of fat, protein, and fiber, and the total of these ingredients subtracted from 100 per cent there remains the percentage of nitrogen free extract.

Would Require Appropriations

I think it would be desirable to have this additional information as a part of the guarantee for feeds. This would, of course, make necessary the granting of a sufficient appropriation to the state Department of Agriculture, Bureau of Chemistry, to employ the additional chemists necessary to analyze feed samples for the additional ingredients.

The figures for the analysis of the feed are in terms of crude protein, crude fat, and crude fiber. It would be very helpful to farmers in making up a ration if these figures could be stated in terms of digestible protein, digestible fat, and digestible carbohydrates. Up to the present time such figures have not been required of the manufacturers because of the difficulty and expense of getting reliable figures, particularly on the digestible analysis of a feed mixture.

Digestion trials are quite expensive and very few of them have been run on some feeds. In Henry's Feeds and Feeding, the crude analysis of dent corn is given for 440 trials, while the digestibility of dent corn has been ascertained in only twelve trials. For wheat bran, the crude analysis is given for the average of 7742 trials, while the digestibility of wheat bran has been determined in only twenty trials. The average analysis of cottonseed meal has been determined by 2556 analyses while only fifteen digestion trials have been made. The crude analysis of linseed meal has been determined in 714 analyses while but three digestion trials have been run.

Digestibility May Change

The situation is further complicated by the fact that feed mixtures may frequently change their character from the standpoint of the proportion of ingredients, and this would, of course, change the digestibility of the mixture. Certain feeds influence the digestibility of other feeds when the two are mixed together. For instance, linseed meal seems to aid in the digestibility of certain other feeds. The proportion of linseed meal present in a mixture, therefore, might change the percentage of digestibility of the mixture.

For these reasons it has not seemed desirable up to the present time to require guarantees of the digestibility of feed mixtures put out by different companies. I believe the time will come, however, when guarantees of feed mixtures will be required on the digestible basis.

Feed standards are made upon the basis of digestible nutrients. A knowledge of the digestible analysis of feeds is, therefore, necessary in balancing a ration. Most text books on feeding give tables showing the average digestible analysis of nearly all the common feeds. Many bulletins are published on the subject, Bulletin 161, Pennsylvania Experiment Station, State College, deals with the Computation of Dairy Rations. It is free for the asking.—A. A. Borland.

Dairy Exposition at Penn State

ON SATURDAY, May 1, the fourth annual dairy exposition was held at the Pennsylvania State College. The exposition was put on entirely by the students in the Dairy Department.

The catalog for the exposition contains a brief statement by Dean R. L. Watts about agricultural research. His remarks are worth repeating.

"The remarkable progress of American agriculture is very largely due to the agricultural experiment stations which have been established in every state. Thru the combined effort of more than half a hundred of these research institutions, farm problems of great diversity have been solved and the leading industry of the nation placed on a sound economic basis.

"The Pennsylvania Agricultural Experiment Station was organized in 1887, tho considerable experimental work had been accomplished previous to that time. At present there are 124 active research projects. They relate to the most important fields of study in crop production, animal nutrition and management, agricultural economics, and rural sociology. Bulletins and reports are issued at frequent intervals and sent without charge to all residents of the state who request them.

Result of Purnell Act

"The Purnell Act, passed by Congress, provides $20,000 to each state for the present fiscal year and the amount will increase at the rate of $10,000 a year until the total yearly allotment to each state will be $60,000. This recent legislation of Congress for the benefit of agriculture is a great stimulus to research in all of the experiment stations.

"From two previous acts of Congress each station receives annually $30,000 a year for experimental purposes."

The dairy products judging contest was one of the interesting events of the exposition. Eighteen men entered the contest, J. L. Soponis, of Minersville, winning first place in butter judging and milk judging; J. R. Iams, of Sycamore, first place in cheese judging; L. G. Roseberry, of Pottsville, first place in ice cream judging.

The ranking of the six highest contestants in the judging of all products was J. L. Soponis, Minersville, first; F. E. Geyer, Birdsboro, second; L. G. Roseberry, Pottsville, third; J. R. Iams, Sycamore, fourth; C. H. Minster, Altoona, fifth, and L. W. Stranahan, Spartansburg, sixth.

Prizes were provided for the occasion by a number of dairy manufacturing firms.

Clean Milk Contests

The nineteen contestants in the clean milk contest each had to do the milking, bottling, and all other work in producing the milk entered by each contestant. Bacterial counts, sediment tests, and a number of other factors were taken into consideration in selecting the winner. The first prize, a silver cup and medal, went to F. W. Morrow, Camptown, and D. S. Keller, of Dawson, received second prize, $5.00 in gold.

Forty-six students took part in the dairy cattle fitting and showing contest. These cattle were fitted up to the pink of perfection: their horns and hoofs were polished until they shone like a looking glass; their tails were fluffed up, giving them the appearance of real honest-to-goodness flappers, and their hair was clipped.

A silver cup and medal were awarded each of the champion fitters for each breed.

The champion Ayrshire fitter was W. D. Johnston, of Howard; the champion Guernsey fitter was R. B. Dickerson, Andover, New Jersey; the champion Holstein fitter was G. R. Sharples, London Grove, Pennsylvania, and the champion Jersey cattle fitter was J. T. Albertson, Bloomsburg.

The three highest awards including all breeds, went to G. R. Sharples, London Grove; R. B. Dickerson, Andover, N. J.; and L. R. Bennett, Westford, Pennsylvania. Each of these men received gold and silver medals.

Prizes for Good Showmanship

The dairy cattle showing contest, which included the consideration of all factors of expert showmanship, was judged by Dr. E. S. Deubler, of Penshurst Farm, at Narberth, and won by J. E. Stouff, of Thorndale. Mr. Stouff received a silver cup and medal. William Lepper, Junior, of Aspinwall, was second, L. R. Bennett, of Westford, third, and A. E. Ifft, of Slippery Rock, fourth.

Thirty-two men engaged in the dairy cattle judging contest. Contestants were required to judge a ring of four cows each of the Holstein, Jersey, Ayrshire, and Guernsey breeds. R. R. Peters, of Philipsburg, was found to be the best judge of Ayrshires, G. B. Carpenter, of Ulysses, won first in judging Guernseys, E. F. McCauliff, of Towanda, was highest man in judging Holsteins, and J. L. Williams, of West Brownsville, carried off the honors of judging Jerseys.

The grand championship in dairy cattle judging was won by R. W. Eno, of Honesdale, who thus won a silver cup and medal.

The banquet that evening was a very successful feature of the occasion. Several addresses were made during the evening.

The Penn State Dairy Exposition is an annual event at State College, and it is hoped that as many dairymen as possible will plan to be present at State College for this big event in the Dairy Department next year. It usually comes about the first Saturday in May, which is also known as "Dad's Day." The two events coming at the same time are certain to provide a day of real pleasure to visitors to the college.

Unadilla Silos are dependable

From the day you receive your silo, and quickly and easily set it up, through all the years of its use—the Unadilla is a dependable help. Many years of building silos have brought the Unadilla to its deserved leadership.

Its continuous door front allows openings at the level of the silage where the feed can be shoved out instead of being laboriously hand-forked up over the door and braces.

The door fasteners form a unique ladder that is *unquestionably* the *safest, most practical silo ladder made.* You don't risk your life when you climb *this* ladder—it's as safe as your front stairs.

Our handsomely illustrated silo catalog will prove very valuable to you. Send for it today—it's free. Inquire about our storage tanks, vats and water tubs.

Riverside Tires

OVERSIZE CORD - BALLOON & TUBES

$9.49 30 x 3½ OVERSIZE CORDS FOR FORDS
Inner Tubes $2.38
All sizes at equally low prices

"I have a pair of Oversize Cord Tires that have been used more than 12,000 miles and show very little wear and still have the original air in them."—K. K. Kimberly, Torrington, Conn., Star Rt. 2.

"The reason I ordered the Riverside Cord tire was that a friend of mine bought four of them over four years ago and has driven them over 17,000 miles and is still using them. I know this to be a fact, for I saw all four on his car which he drove over from Davenport to visit me."
A. D. Dickinson, 1202—32nd Street, Rock Island, Illinois.

The Greatest Tire Value in the Whole World

You might buy a tire of equal quality, with just as long a guarantee—*if you pay more money!*

But you cannot buy more tire satisfaction, more mileage, for each penny of the price, than you get in a Riverside.

12,000 miles guaranteed
Your Saving is One-third

Riverside Cords are guaranteed for 12,000 miles; Riverside Balloons for 10,000 miles. And back of this guarantee is a 54 year old name—Montgomery Ward & Co. A name that has always been known to stand for reliability and square dealing.

Our customers know we live up to our guarantee. We could not possibly put our liberal guarantee on a tire unless exceptional quality was built into the tire. You take absolutely no risk whatever in buying a Riverside Tire.

Why Ward's Tire Prices Are So Low

We believe we are the largest retailers of tires in the world. This vast buying power enables us to save on everything that goes into a tire. For example, we buy our own crude rubber in enormous quantities—and always for cash.

Riverside Tires are made in our own moulds under our personal supervision. The workmanship is the most accurate. No better materials can be found in any tire regardless of price.

We never sacrifice quality to make a low price—

The market is being flooded with low priced tires specially made to meet Riverside prices but not to meet Riverside quality.

Many of these low priced tires are made of "rubber composition" and contain so little new, live rubber that they cannot possibly give satisfactory mileage.

Riverside Tires are absolutely guaranteed and are the biggest tire value you can possibly buy.

MYERS "Honor-Bilt" Hay & Grain Unloading Tools

WHEN harvest time arrives and the hay is cut, it must be mowed or stacked without delay. Hay once down must be worked fast if it is to be saved from rapid deterioration.

At this critical time the profits from many acres often depend upon your hay unloading tools. With Myers Hay Unloading Tools you are assured of dependable, labor-saving equipment that never balks on the job. Your wheat, oats, and corn also, must be stored promptly and with a minimum labor cost. Myers Tools are "Honor-Bilt" for faithful service that will spare you and your help many hours of back-breaking labor.

The Myers Line is complete—any type of hay unloading tools you prefer—unloaders for forks or slings, forks for any kind of hay or grain, slings for handling hay, grain and fodder; steel tracks, pulleys and fixtures. Myers is also World Headquarters for hand and power pumps of all sizes and for complete Water Systems for farm and home.

For your light truck, use Kelly Cushion Tires

KELLY Demountable Cushion tires are intended to replace pneumatic tires on Ford and other light trucks in service where the wear on pneumatic tires is excessive.

Kelly Cushions are practically as easy-riding as pneumatics and while they cost a little more they are far cheaper in the end because they will stand up under heavier loads, are not subject to puncture and will last two or three times as long. Since they are built on the rim, you mount them on the wheel just as you would a pneumatic rim. All the tools you need are a wrench and a jack.

They come in sizes to replace 30x3 1-2, 30x5 and 33x5 pneumatics.

During the Bees' Busy Season

Be Sure that There's Plenty of Room in the Hives

BEFORE bees will store surplus honey the colony must have more bees than are needed in the brood chamber and more nectar must be coming in than is necessary for the maintenance of the colony. The bees working freely on nectar-bearing flowers, plenty of new honey in the combs and new light yellow or white wax showing along the upper surfaces of the combs are signs that the bees are ready to store surplus honey. When these conditions are present it is time to put on the supers.

Only strong colonies will work well in comb honey supers. The weaker colonies should be operated for extracted or liquid honey, or for making increase. If the locality affords a late honey flow, the weak colonies may be held together and will make good comb honey colonies for the late flow.

In operating for liquid or extracted honey one of two methods may be used with about equally good results. No matter whether the colony occupies one or two stories, at the beginning of the honey flow, when supering time comes simply remove the hive cover and place the supers on the colony. No queen excluder is used. When additional room is needed the new supers are added above. The queen may or may not occupy some of the combs in the supers.

In case brood is found in the supers when the honey crop is removed it is a simple matter to concentrate the combs having brood in them into one super and extract all combs containing only honey. This method is especially adapted to locations and seasons of rapid honey flows. The bees will often fill the combs with honey so rapidly that the queen will not enter the supers.

Keep the Queen Out of the Supers

The "Demaree" method is very efficient in preventing the queen from entering the supers and in swarm control. To prepare the colony remove it from its bottom board and place on the bottom board a hive body containing full sheets of comb foundation. Exchange one frame of foundation for one frame of brood and the queen from the colony. The new hive body now contains nine sheets of foundation, one comb of brood and the queen. Be sure that this comb of brood contains no queen cell and be sure to destroy any queen cells that may be in the entire colony.

Place a queen excluder on this prepared hive body and over the queen excluder place not less than one full depth or two half depth extracting supers. On top of the supers place the original hive body containing the brood and the bees. All combs containing old honey should be concentrated into one hive body and this hive body marked so that these combs will not be extracted but will be saved for the food chamber for next year. As the brood emerges from the brood combs above, the bees will fill the combs with honey.

Additional room must be given as needed. In fact, super room for extracted honey may be given faster than is needed and do no harm. It is better for both swarm control and liquid honey production for the bees to have more room than is needed rather than not enough.

To Keep Them Working

In operating for comb honey production all comb honey supers should be filled with sections having full sheets of thin super foundation. If only narrow starters are used the bees will often loaf or swarm without entering the supers. They will enter the supers more readily and more fancy honey with less swarming will result if full sheets of foundation are used.

If the bees are in one-story hives when the honey flow begins, examine the combs and destroy any queen cells that may be developing. In case queen cells are found remove about three combs and replace them with frames containing full sheets of foundation. Alternate the foundation between combs of brood. Combs containing mostly honey and pollen should be removed. The object is to have as little honey as possible in the brood nest. The bees do not need it when nectar is coming in from the field and the presence of sealed honey in the brood nest tends to provoke swarming.

In case no queen cells are found remove only the combs of honey and pollen and replace them with combs of sealed brood from other colonies that may be too weak for comb honey production. Having the brood nest full of brood forces the bees to store the incoming honey in the supers, gives the queen plenty of room for egg laying, as the brood emerges, and insures the continued population of the colony with young bees during the entire honey flow.

Notes from Maryland

THE growing of the loblolly pine in Anne Arundel County is very interesting. The tree grows rapidly and has it "all over" the common scrub pine. Many farmers have made plantings with the idea of replacing the old-timers with this aristocrat.

J. H. Franklin, of Sudley, has made his second planting of pines this year and Professor Werntz has planted about 5000 near Jones Station. There are now 1000 growing on the grounds of the Crownsville State Hospital.

* * *

The tile drainage system for farms is being used in Anne Arundel County. At the present time eight farms are being improved by the installation of this system.

* * *

Maryland fruit growers are much interested in the Mammoth Shenandoah Apple Blossom Festival to be held soon at Winchester, Virginia, when the hundreds of thousands of apple trees will be a delicately pink, huge bouquet. The festival committee at the Winchester headquarters will announce the exact dates.

According to the Maryland State Horticultural Society this great festival was inaugurated to advertise the apple industry in the Shenandoah-Cumberland Valley fruit section of Virginia, Maryland, West Virginia and Pennsylvania.

A special orchard trip and program have been arranged and it will be worth the while of those interested in fruit trees to visit the festival.

There are indications of a good fruit crop in Maryland. The sap was not called up in January or February by unseasonable warm spells and the consistently cool spring weather has kept the buds dormant. Horticulturists report all varieties well budded in nearly all parts of the state.—Marylander.

Farm Life Is the Happiest

DEAR EDITOR:—I want to write a few words in answer to Mr. E. H. Brigham, Susquehanna County, Pa.

I want to say that I think farm life is the happiest and most progressive life that anyone can live.

I live on a farm and have experienced the city life and must say I cannot see any advantage in going to the city to live in the dirt and dark and impure air and give up good fresh air and good fresh water and bright sunshine. The farmer does not need to look at his watch in the morning to see how soon the seven o'clock whistle is going to blow. He must do his work, of course, but feels so good to be doing the bossing himself.

One writer says he is a backwoods farmer and lives five miles from the nearest doctor, railroad and moving picture house. Well, I think he is an unreasonable distance from his doctor and railroad but he is just a nice distance away from the moving picture shop.

Why Doesn't He Live in the City?

He says he has experienced city and country life and now lives on a backwoods farm and still has a hankering for the city life. We just wonder why he does not live in the city now where he would be close to his doctor, railroad and movie.

Altho he seems to think his son should live and have employment in the city I would think his son should be interested in staying on the backwoods farm trying to enjoy the country life.

He speaks of the advantage of the city man being close to his lodge, clubs and church.

Well, I must say I belong to lodges, church and other organizations and live at least three miles from the closest one and it is very easy for me to attend any of them at any time of the year.

In referring to the independence of the farmer and his health and social standing one writer says he thinks this is mostly "bunk," not to say anything of the many people who are forced to leave the city on account of bad health.

I think country folks are not liable to be forced to move to the city.—Ross Saylor, Somerset County, Pa.

Animal Shows Gratitude

DURING the summer about twenty-three years ago, it fell to my lot to search for, and drive home, our cattle from mountain pastures of the neighborhood. Some of the farmers permitted their cattle (other than milking cows) to roam the hills thruout the season and only drove them home late in the fall. This freedom from contact with their owners for such a long period naturally made them wild and shy, and made it difficult to get near them.

About the time mentioned, and during the month of July, a terrific storm swept the mountain side, uprooting the largest trees and doing immense damage generally. Within several hours after the storm's passing I was searching for our cattle along the mountain trails and came upon one of these wild young animals tightly caught between two standing trees which grew from the same root system.

I approached gently, thinking perhaps it would begin to struggle, but I was very much surprised to find such was not the case. After considerable effort I was able to free the animal and expected to see it scamper quickly away, but again found my judgment very much in error. The animal at once began to follow me closely for considerable distance, as if to show its gratitude.

I told the owner of the incident and he informed me that this animal was one of the wildest of the herd and that he could not account for its tameness when I released it unless it understood, in some measure, the favor done it.—Charles F. Buhrman, Franklin County, Pa.

RADIO DEPARTMENT

New Station Interferes

I have a two-bulb regenerative set which gave good results until a new station came on the air. I live about sixty miles from New York and this new station is about thirty. When this station is on I can hardly get New York stations for interference. A friend told me to wrap some wire around a tube and connect one end to the aerial post and the other to the ground post of the set. Do you think this would help? If so, how many feet of wire should I use, and what number?

We have a windmill water system and I have the ground wire connected to the water pipe in the kitchen. Is this a good ground?

Which is the best kind of lightning arrestor, an air gap type or an non-air gap type? —C. H., Monmouth Co., N. J.

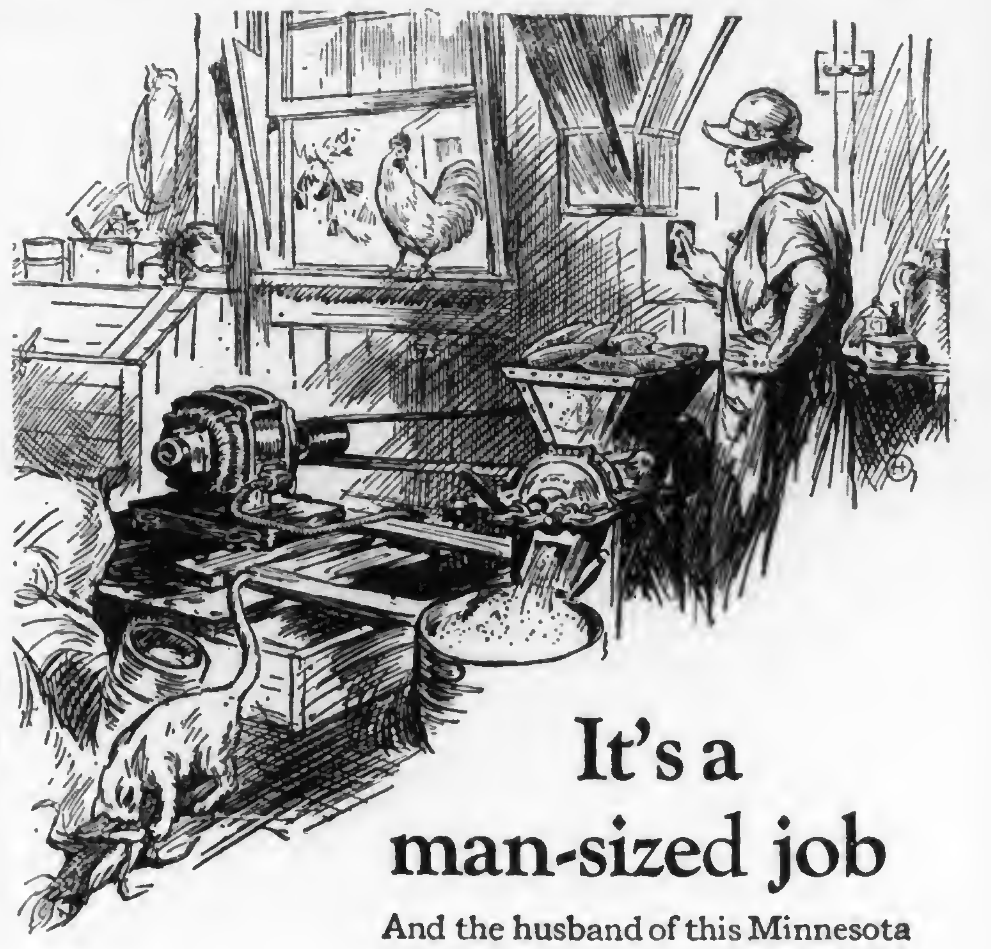
The remedy suggested by your friend for relieving the interference you experience will not answer. You should construct or buy a wave trap.

The tubing is about three and one-half to four inches in diameter. The smaller coil is wound with five turns of wire and the larger coil with forty-five. In case this does not completely stop the interference, wind a few more turns on the small coil, possibly up to ten. Stand the wave trap a foot or more from the set.

You can use an enclosed variable condenser or an open one mounted on a wooden board or radio panel. The condenser should be .0005 mfds. capacity (about twenty-three plates). The wire may be any size between No. 20 and No. 26, preferably with double silk or cotton insulation.

The adjustment of the condenser will be quite fine and the interference is stopped by tuning the wave trap to the wave of the interfering station.

Yes, the water system and windmill pipes should provide a good ground. I do not understand what you mean by the "air-gap or non-air-gap" type of arrestor. All arrestors have an air gap. If you put the arrestor outdoors, get one with "petticoat" drip casing so that water will not get on both terminals and weaken the signals. Pay enough for the arrestor to obtain a high grade of insulation. The glass enclosed cartridge type is also satisfactory.—B. F.



It's a man-sized job

And the husband of this Minnesota farm woman is away most of the time.

But it is done—a Faribault County woman tells how:

"I can pump water myself by only pulling the switch and adjusting the belt. I can open the chute, let down the desired amount of feed, *press the button* and the feed is ground."

That briefly is the story of electricity on the farm. It eases the everlasting grind of farm work and makes farm life more worth while.

The General Electric Company manufactures many electrical products which are used on the farm. The G-E Farm Book describing these products may be obtained from your local light and power company.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane and get medicines and letters for Pelletier from the girl back home. While in Churchill a half-breed reported he'd seen a white man and woman. A white woman in this region was unusual, her reason for being there so puzzling, that MacVeigh decided to hunt for them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

Just when Pelletier believed he was dying Jim Blake appeared with a story of an Eskimo squaw left at an igloo up the coast. Pelletier discovers the story to be false and starts a search for the deserted white woman which ended abruptly when he found a dead Eskimo woman and a living baby—Little Mystery—in a nearby igloo. Several days after MacVeigh's return to the cabin Eskimos—the dangerous Kogmollocks—came for the child and to save her the men fled. Pelletier was shot in the arm but they went on. Next morning they caught sight of a lone figure coming toward them from the forest and at the same time a dozen sledges and a score of running men crossing the barren.

(Continued from last week)

THEY set out at a trot, Pelletier running with his wounded arm at his side. Suddenly the lone figure between them and the forest disappeared. It had fallen flat in the snow, where it lay only a black speck. In a moment it rose again and advanced. Both Pelletier and Billy were looking when it fell for a second time.

An unpleasant laugh came from MacVeigh's lips.

"No help there," he said. "Whoever he is he's half dead!"

The figure was climbing to its feet for the fifth time, and was only on its hands and knees, when the sledge drew up. It was a white man. His head was bare, his face deathlike. His neck was open to the cold wind, and to the others' astonishment he wore no heavier garment over his dark flannel shirt. His eyes burned wildly from out of a shaggy growth of beard and hair, and he was panting like one who had traveled miles instead of a few hundred yards.

All this Billy saw at a glance, and then he gave a sudden, unbelieving cry. The man's red eyes rested on his, and every fiber in his body seemed for a moment to have lost the power of action. He gasped and stared—and Pelletier started as if stung at the words which came first from his lips.

"Deane—Scottie Deane!"

An amazed cry broke from Pelletier. He looked at MacVeigh, his chief. He made an involuntary movement forward, but Billy was ahead of him. He had flung down his rifle, and in an instant was on his knees at Deane's side, supporting his emaciated figure in his arms.

"Good God! what does this mean, old man?" he cried, forgetting Pelletier. "What has happened? Why are you away up here? And where—where—is she?"

He had gripped Deane's hand. He was holding him tight, and Deane, looking up into his eyes, saw that he was no longer looking into the face of the law—but that of a brother. He smiled feebly.

"Cabin—back there—in edge—woods," he gasped. "Saw you—coming. Thought mebby you'd pass—so—came out. I'm done for—dying."

He drew a deep breath and tried to assist himself as Billy raised him to his feet. A little wailing cry came from the sledge. Startled, Deane turned his eyes toward that cry.

"My God!" he screamed.

HE TORE himself away from Billy and flung himself upon his knees beside Little Mystery, sobbing and talking like a madman as he clasped the frightened child in his arms. With her he leaped to his feet with new strength.

"She's mine—mine!" he cried fiercely. "She's what brought me back. I was going for her. Where did you get her? How—"

There came to them now in sudden chorus the wild voice of the Eskimo dogs out on the plain. Deane heard the cry, and faced with the others in their direction. They were not more than half a mile away, bearing down upon them swiftly. Billy knew that there was not a moment to lose. In a flash it leaped upon him that in some way Deane and Isobel and Little Mystery were associated with that avenging horde, and as quickly as he could he told Deane what had happened.

Sanity had come back into Deane's eyes, and no sooner had he heard than he ran out in the face of the army of little brown men, with Little Mystery in his arms. MacVeigh and Pelletier could hear him calling to them from a distance. They were in the edge of the forest when Deane met the Eskimos. There was a long wait, and then Deane and Little Mystery came back—on a sledge drawn by Eskimo dogs. Beside the sledge walked the chief who had been wounded in the cabin at Fullerton Point. Deane was swaying, his head was bowed half upon his breast, and the chief and another Eskimo were supporting him. He nodded to the right, and a hundred yards away they found a cabin.

The powerful little northerners carried him in, still clutching Little Mystery in his arms, and he made a motion for Billy to follow him—alone. Inside the cabin they placed him on a low bunk, and with a weak but terrible cough he beckoned Billy to his side. MacVeigh knew what that cough meant. The sick man had suffered terrible exposure—and the tissue of his lungs was sloughing away. It was death—the most terrible death of the north.

For a few moments Deane lay panting, clasping one of Billy's hands. Little Mystery slipped to the floor and began to investigate the cabin. Deane smiled into Billy's eyes.

"You've come again — just in time," he said, quite steadily. "Seems queer, don't it Billy?"

FOR the first time he spoke the other's name, as if he had known him a lifetime. Billy covered him over gently with one of the blankets, and in spite of himself his eyes sought about him questioningly. Deane saw the look.

"She didn't come," he whispered. "I left her—"

He broke off with a racking cough that brought a crimson stain to his lips. Billy felt a choking grief.

"You must be quiet," he said. "Don't try to talk now. You have no fire and I will build one. Then I'll make you something hot."

He went to move away, but one of Deane's hands detained him.

"Not until I've said something to you, Billy," he insisted. "You know—you understand. I'm dying. It's liable to come any minute now, and I've got to tell you—things. You must understand—before I go. I won't be long. I killed a man, but I'm—not sorry. He tried to insult her—my wife—an' you—you'd have killed him, too. You people began to hunt me, and for safety we went far north—among the Eskimo—an' lived there—long time. The Eskimos—they loved the little girl an' wife, 'specially little Isobel. Thought them angels—some sort.

"Then we heard you were goin' to hunt for me—up there—among the Eskimo. So we set out with the box. Box was for her—to keep her from fearful cold. We didn't dare take the baby—so we left her up there. We were going back—soon—after you'd made your hunt. When we saw your fire on the edge of the barren, she made me get in the box—an' so—so you found us. You know—after that.

"You thought it was—coffin—an' she told you I was dead. You were good—good to her—an' you must go down there where she is and take little Isobel. We were goin' to do as you said—an' go to South America. But we had to have the baby, an' I came back. Should have told you. We knew that—afterward. But we were afraid—to tell the secret—even to you—"

He stopped panting and coughing. Billy was crushing both his thin, cold hands in his own. He found no word to say. He waited, fighting to stifle the sobbing grief in his breath.

"You were good—good—good—to her," repeated Deane weakly. "You loved her—an' it was right—because you thought I was dead, an' she was alone an' needed help. I'm glad—you love her. You've been good—'n' honest—an' I want some one like you to love her an' care for her. She ain't got nobody but me—an' little Isobel. I'm glad—glad—I've found a man—like you!"

He suddenly wrenched his hands free and took Billy's tense face between them staring straight into his eyes.

"An'—an'—I give her to you," he said. "She's an angel, and she's alone—needs some one—an' you—you'll be good to her. You must go down to her—Pierre Croisset's cabin—on the Little Beaver. An' you'll be good to her—good to her—"

"I will go to her," said Billy softly. "And I swear here on my knees before the great and good God that I will do what an honorable man should do!"

Deane's rigid body relaxed, and he sank back on his blankets with a sigh of relief.

"I worried—for her," he said. "I've always believed in a God—tho I killed a man—an' He sent you here in time!"

A sudden questioning light came into his eyes.

"The man who stole little Isobel," he breathed. "Who was he?"

"Pelletier—the men out there—killed him when he came to the cabin," said Billy. "He said his name was Blake—Jim Blake."

"Blake! Blake! Blake!"

Again Deane's voice rose from the edge of death to a shriek.

"Blake, you say? A great coarse sailorman, with red hair— red beard—yellow teeth like a walrus! Blake—Blake—"

He sank back again with a thrilling, half-mad laugh.

"Then—then it's all been a mistake—a funny mistake," he said, and his eyes closed, and his voice spoke the words as tho he were uttering them from out of a dream. Billy saw that the end was near. He bent down to catch the dying man's last words. Deane's hands were as cold as ice. His lips were white. And then Deane whispered:

"We fought—I thought I killed him—an' threw him into the sea. His right name was Samuelson. You knew him—by that name—but he went often—by Blake—Jim Blake. So—so—I'm—I'm not a murderer—after all. An' he—he came back for revenge—and—stole—little—Isobel. I'm—I'm—not—a—murderer. You—you—will—tell—her. You'll tell her—I didn't kill him—after all. You'll tell her—an'—be — good—good—"

He smiled. Billy bent lower.

"Again I swear before the good God that I will do what an honorable man should do," he replied.

DEANE made no answer. He did not hear. The smile did not fade entirely from his lips. But Billy knew that in this moment death had come in thru the cabin door. With a groan of anguish he dropped Deane's stiffening hand.

Little Isobel pattered across the floor to his side. She laughed, and suddenly Billy turned and caught her in his arms, and crumpled down there on the floor beside the one brother he had known in life, he sobbed like a woman.

IT WAS little Isobel who pulled MacVeigh together. After a little he rose with her in his arms and turned her from the wall, while he covered Deane's face with the end of a blanket. Then he went to the door. The Eskimos were building fires. Pelletier was seated on the sledge a short distance from the cabin, and at Billy's call he came toward him.

"If you don't mind, you can take her over to one of the fires for a little while," said Billy. "Scottie is dead. Try and make the chief understand."

He did not wait for Pelletier to question him, but closed the door quietly and went back to Deane. He drew off the blanket and gazed for a moment into the still, bearded face.

"My Gawd, an' she's waitin' for you 'n' looking for you and thinks you're coming back soon," he whispered. "You 'n' the kid!"

Reverently he began the task ahead of him. One after another he went into Deane's pockets, and drew forth what he found. In one pocket there was a small knife, some cartridges, and a match-box. He placed them in a handkerchief along with other things he found.

Last of all, he found in Deane's breast-pocket a worn and faded envelope. He peered into the open end before he placed it on the little pile, and his heart gave a sudden throb when he saw the blue flower petals Isobel had given him. When he was done he crossed Deane's hands upon his breast. He was tying the ends of the handkerchief when the door opened softly behind him.

The little dark chief entered. He was followed by four other Eskimos. They had left their weapons outside. They seemed scarcely to breathe as they ranged themselves in a line and looked down upon Scottie Deane. Not a sign of emotion came into their expressionless faces, not the flicker of an eyelash did the immobility of their faces change.

In a low, clacking monotone they began to speak, and there was no expression of grief in their voices. Yet Billy understood now that in the hearts of these little brown men Scottie Deane stood enshrined like a god. Before he was cold in death they had come to chant his deeds and his virtues to the unseen spirits who would wait and watch at his side until the beginning of the new day.

For ten minutes the monotone continued. Then the five men turned and, without a word—without looking at him—went out of the cabin. Billy followed them, wondering if Deane had convinced them that he and Pelletier were his friends. If he had not done that, he feared that there would still be trouble over little Isobel. He was delighted when he found Pelletier talking with one of the men.

"I've found a fellow here whose lingo I can get along with," cried Pelletier. "I've been telling 'em what bully friends we are, and have made 'em understand all about Blake. I've shaken hands with them all, three or four times, and we feel pretty good. Better mix a little. They don't like the idea of giving us the kid, now that Scottie's dead. They're asking for the woman."

HALF an hour later MacVeigh and Pelletier returned to the cabin. At that time he was confident that the Eskimos would give them no further trouble, and that they expected to leave Isobel in their possession. The chief, however, had given Billy to understand that they reserved the right to bury Deane.

Billy felt that he was now in a position where he would have to tell Pelletier some of the things that had happened to him on his return to Churchill. He had reported Deane's death as having occurred weeks before, as the result of a fall and when he returned to Fort Churchill he knew that he would have to stick to that story. Unless Pelletier knew of Isobel, his love for her, and his own defiance of the law in giving them their freedom, his comrade might let out the truth, and ruin him.

In the cabin they sat down at the table. Pelletier's arm was in a sling. His face was drawn and haggard and blackened by powder. He drew his revolver, emptied it of cartridges, and gave it to little Isobel to play with. He had kept up his spirits among the Eskimos, but he made no effort to conceal his dejection now.

"I've lost her," he said, looking at Billy. "You're going to take her—to her mother?"

"Yes."

"It hurts. You don't know how it's goin' to hurt—to lose her," he said.

MacVeigh leaned across the table and spoke earnestly.

"Yes, I know what it means, Pelly," he replied. "I know what it means to love some one—and lose. I know. Listen."

Quickly he told Pelletier the story of the barren, of the coming of Isobel, the mother; of the kiss she had given him, and of the flight, the pursuit, the recapture, and of that final moment when he had taken the steel cuffs from Deane's wrists. Once he had begun the story, he left nothing untold—even to the division of the blue flower petals, and the tress of Isobel's hair.

He drew both from his pocket and showed them to Pelletier, and at the tremble in his voice there came a mistiness in his comrade's eyes. When he had finished, Pelletier reached across with his one good arm and gripped the other's hand.

"An' what she said about the blue flower is comin' true, Billy," he whispered. "It's bringing happiness to you, just as she said, for you're going down to her—"

MacVeigh interrupted him.

"No it's not," he said softly. "She loved him—as much as the girl down there will ever love you, Pelly, and when I tell her what happened—her heart will break. That—can't bring happiness—for me!"

The hours of that day bore leaden weights for Billy. The two men made their plans. A number of the Eskimos agreed to accompany Pelletier as far as Eskimo Point, whence he would make his way alone to Churchill. Billy would strike south to the Little Beaver, in search of Croisset's cabin and Isobel. He was glad when night came. It was late when he went to the door, opened it, and looked out.

IN THE edge of the timber-line it was black—black not only with the gloom of night, but with the concentrated darkness of spruce and balsam, and a sky so low and thick that one could almost hear the wailing swish of it overhead, like the steady sobbing of surf on seashore. It was black—save for the small circles of light made by the Eskimo fires, about which half a hundred of the little brown men sat or crouched.

The masters of the camp were all awake, but twice as many dogs, exhausted and footsore, lay curled into heaps; as inanimate as if dead. There was present a strange silence and a strange and unnatural gloom that was not of the night alone—a silence broken only by the low moaning of the wind out on the barren, the restlessness in the air above the tree tops, and the crackling of the fires. The Eskimos were as motionless as so many dead men. Their round, expressionless eyes were wide open. They sat or crouched with their backs to the barren, their faces turned into the still deeper blackness of the forest.

Some distance away, like a star, there gleamed the small and steady light in the cabin window. For two hours the eyes of those about the fires had been fixed on that light. And at intervals there had risen from among the stony-faced watchers the little chief, whose clacking voice each time joined for a few moments the wailing of the wind, the swish of the low-hanging sky, and the crackling of the fires. But there was sound of no other voice or movement. He alone moved and spoke—for to the others the clacking sounds he made was speech—words spoken for the man who lay dead in the cabin.

A DOZEN times Pelletier and MacVeigh had looked out to the fires, and looked each time at the hour. This time Billy said:

"They're moving, Pelly! They're jumping to their feet and coming this way!"

He looked at his watch again.

"They're mighty good guessers. It's a quarter after twelve. When a chief or a big man dies they bury him in the first hour of the new day. They're coming after Deane."

He opened the door and stepped out into the night. Pelletier joined him. The Eskimos advanced without a sound, and stopped in a shadowy group twenty paces from the cabin. Five of the little fur-clad men detached themselves from the others and filed into the cabin, with the chief man at their head. As they bent over Deane they began to chant a low monotone which awakened little Isobel, who sat up and stared sleepily at the strange scene. Billy went to her and gathered her close in his arms. She was sleeping again when he put her down among the blankets. The Eskimos were gone with their burden. He could hear the low chanting of the tribe.

"I found her, and I thought she was mine," said Pelletier's low voice at his side. "But she ain't, Billy. She's yours."

MacVeigh broke in on him as tho he had not heard.

"You'd better get to bed, Pelly," he warned. "That arm needs rest. I'm going out to see where they bury him."

He put on his cap and heavy coat and went as far as the door, then turned back. From his kit he took a belt-ax and nails.

The wind was blowing more strongly over the barren, and MacVeigh could no longer hear the low lament of the Eskimos. He moved toward their fires and found them deserted of men, only the dogs remaining in their deathlike sleep. And then, far down the edge of the timber, he saw a flare of light.

Five minutes later he stood hidden in a deep shadow, a few paces from the Eskimos. They had dug the grave early in the evening, out on the great snow-plain, free of the trees; and as the fire they had built lighted up their dark, round faces, MacVeigh saw the five little black men who had borne forth Scottie Deane leaning over the shallow hole in the frozen earth. Scottie was already gone. The earth and ice and frozen moss were falling in upon him, and not a sound fell now from the thick lips of his savage mourners.

(To be continued next week)

News and Notes

WE HAVE heard of city churches that use ball rooms for social activities intended to attract young people. But it remained for a New York country church to establish a "bawl room," a place where mothers who wish to attend services may leave their fretful babies. The pastor of this church is a bachelor, but we have no proof that he gave the baby room its not euphomistic name.

* * *

Kettle Creek is a famous trout fishing stream in Potter County, Pennsylvania. If we may believe this story that drifts to our desk from the State Department of Forests and Waters, it isn't the stream it used to be.

* * *

It seems that on the first day of trout season a lone fisherman followed Kettle Creek all day without getting a bite, or even a nibble. When about to give up in discouragement, he met another fisherman. Feeling sorry for him, the stranger drew out of his pocket a flask of "bootleg" and put some of it on the angle worm that had spent an exhausting but uneventful day in the water. Then the unlucky angler threw his hook back into the stream. In a moment there was a great commotion. He pulled in his line and found a thirteen-inch brook trout absolutely choked to death. The angle worm had a strangle hold around its neck.

* * *

What's the matter with that apple orchard? The trouble may be any one, of several, of sixty-six different maladies. The United States Department of Agriculture lists that many diseases which attack apples. Wheat is subject to thirty-one different diseases, tomatoes to forty-two and corn to twenty-eight. That's saying nothing about grubs, beetles, aphids, moths and borers.

* * *

Montana farmers hold what they call "gopher dances." The object is to raise money to kill off the gophers, a burrowing rodent similar to our ground hogs. These pests are reported to be increasing rapidly in some sections of the East. Why not some woodchuck dances?

* * *

A Massachusetts Grange wanted a new hall, but didn't have the necessary money. One evening after a Grange supper there were some doughnuts left over. Someone conceived the idea of selling them and starting a fund for the new hall. The doughnuts were auctioned off, and brought fabulous prices. Now the new hall is completed.

Did you ever hear this one?—

A real estate man who was always coming home with tall stories of sales running into thousands and hundreds of thousands of dollars, was accosted one evening by his son, aged, eleven, who announced:

"Well, Dad, I've sold the dog."

"You've sold the dog?"

"Yup."

"What for?"

"For $10,000."

"For ten thousand dollars! What are you talking about? Where's the money?"

"I didn't get money, Dad. I got two $5000 cats for it."

Mother was giving little Johnnie a lecture: "You should always be exceedingly careful about your conduct. I want you never to do anything which you would be ashamed to have the whole world see you doing."

The youngster let out a whoop of delight and turned a handspring in his exuberance.

"What in the world is the matter with you? Are you crazy?" demanded his mother.

"No'm," was the answer. "I'm just glad 'cause you don't expect me to take baths any more."

A benevolent old lady was walking along the street when she observed a beggar. She stopped and looked with compassionate sympathy at the man, and then placed a coin in his hand.

"My poor fellow," she said, "here is a quarter for you. Goodness gracious, it must be dreadful to be lame! But I think it would be worse to be blind."

"Yer right, lady," agreed the beggar. "When I was blind I was always getting counterfeit money."

A New York man who had been working as a teamster tried to secure a job on the police force. He passed the physical tests, but the written examination gave him a little trouble. One question was:

"A man buys an article for $12.25 and sells it for $9.75; does he gain or lose on the transaction?"

After pondering over the question our friend finally answered:

"He gains on the cents, but loses on the dollars."

Reporter—"And in what state were you born, professor?"

Professor—"Unless my recollection fails me, in a state of ignorance."

Reporter (scribbling)—"Yes, to be sure, and how long have you lived there?"—Baker Orange.

OUR YOUNG PEOPLE'S FORUM.

Winners in the Contest—My Favorite Pet

Group 1, twelve years old and over

First Prize

I live on a farm and have many pets but from all the pets I have I choose my pony as my favorite.

I have had him two years. His name is Babe. He is a Shetland pony and not very large. His coat is dark brown and he has four white feet and a white star on his forehead. His hoofs are striped with brown and white and his thick and glossy mane is black.

I choose him because he is smart and many more pleasant hours can be spent with him than with any of my other pets.

He Goes to School

After I had him a few weeks I took him up to school and let every one have a ride on him. When he got tired being ridden and we had put someone else on his back he would take them a few feet and bring them back again to the place where they had been put on. This was to let us all know he was tired and wanted to go home.

BABE, MY SHETLAND PONY
Violette Ellis (X), Mercer County, Pa.

If I am out in the pasture field where he is and he sees me he will run up to me and expect me to pat him or give him something to eat. If he is coming up to me and sees I am carrying a bridle he will turn and trot off to another part of the field so I will not catch him and take him to the barn.

If he is not tied and sees me coming from school he will come to meet me but he always expects something to eat.

He knows nearly all the boys and girls in the neighborhood because they have all ridden him.

In the summer I drive him to town. When I am ready to go home and go to untie him he throws up his head and looks as if he was saying, "Give me a piece of candy." If he does not get it he thinks he has been punished for something he didn't do but he seldom goes home without getting something to eat.

I think if any boy or girl had a pony as smart as mine they would choose him as their favorite pet, altho they had many more nice ones.—Violette Ellis, fifteen (X), Mercer County, Pa.

Second Prize

Dear Cousin Ruth:—I am writing a short story about my pet horse. Father bought it for me two years ago and I was very proud of him. His name is "Tommy."

I have a sulky in which I go out driving and when it is muddy. Tommy likes to run very fast, and spatter me all up with mud, but that I do not mind at all.

I give Tommy one ear of corn each meal, and all the hay he can eat when he is not working. When at work two to three ears at each meal.

He likes it when I water and curry him. But he does not like any one to ride him.—John T. Ruhland, fourteen (X), York County, Pa.

RIDING ON TOMMY
John T. Ruhland (X), York County, Pa.

Third Prize

Dear Cousin Ruth and Forum Friends:—I am sending a picture of my pet pony. I have had her for six years. I have a buggy, harness, saddle, bridle, and a little stone boat. In the winter some of my nieces and nephews come and hitch her to the stone boat and we all go for a ride. Sometimes we all fall off in the snow and the pony runs on home. We sure have lots of fun. We hitch her to the sled sometimes.

WE'VE BEEN FRIENDS SIX YEARS
Lucile Bentley (X), Mercer County, Pa.

I ride her to school in the fall and in the spring. I would not do without her for anything. We do lots of other things with her but as you want the story short I won't write any more. The picture is not very good but if I happen to get a camera maybe I could get a better one to send in.—Lucile Bentley, twelve (X), Mercer County, Pa.

Group 2, under twelve

First Prize

Dear Cousin Ruth and Forum Friends:—I will send a picture of my favorite pet dog, Dewy, and myself and tell you why I loved him best.

Dewy was the first pet I ever owned. He was a little puppy just big enough to play with me when I could only sit up, and when we both got big, why he was always with me and never allowed any one to come near me when I would play in my playhouse, and he brought the cows and kept the chickens out of the yard for mother. Sometimes I would lie down on the porch swing and fall asleep and Dewy always lay under the swing so I would be safe. My oldest sister often took our picture with the camera.

HERE WE ARE, DEWY AND I
Nellie L. Peddicord (X), Indiana Co., Pa.

So you see I will always remember him for everybody wanted to buy him but Daddy wouldn't sell him. He was like one of the family but he went away last November and I never saw him since.—Nellie L. Peddicord, seven (X), Indiana County, Pa.

Second Prize

Dear Cousin Ruth and Forum Friends:—We have for our pet a little dog, "Brandy." She sure is some dog. She goes part way with us to school in the morning and she comes to meet us when school is out.

One day she found a nest of eggs under the corn crib and she brought one in her mouth to the house and fussed till we went out with her, then she took us to where the nest was.

When we would coast down the hills this winter, "belly bumper," we call it, Brandy would sit on our backs for a ride, too. She goes with us to the creek when we go fishing and wading in the summer.—Stella Shearer, eight (X), and Marlin Spahr, eight (X), Perry County, Pa.

IN THE SNOW WITH BRANDY
Stella Shearer (X), and Marlin Spahr (X), Perry County, Pa.

Third Prize

Dear Cousin Ruth and Forum Friends:—I have decided to enter the contest so am sending you a picture of my favorite pet.

My pet is a bull dog. He is about three years old now, was just a pup when we got him. I like him very much because he is so playful and kind. He likes to run after the ball and also likes to drive the cows.

He is white with a few black spots on him and his name is Snub.

SNUB, MY BULL DOG
Ruth Stuckey (X), Bedford County, Pa.

He likes very much to ride in a car or truck and ride the horses.

He can also climb trees.—Ruth Stuckey, ten (X), Bedford County, Pa.

Our Page This Time

CONGRATULATIONS to those whose pictures and stories of their pets won the prizes in the last contest. How I'd like to be able to give all of you cameras so that everybody could send in pictures for the page this summer. I can't, tho, so you who haven't any will have to try for them in the contests that are coming along soon. I hope you enjoy these prize winning stories and pictures as much as I have.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—There are nine well known rivers in this week's puzzle. The trouble is to fit their streams together correctly—they are pretty well mixed up. That is, the first part of the name of one river is on the same line with the last part of the name of another river. Just look at the last line; you know that "HUD" should have "SON" follow it, and you will find that "SON" in the third line. When you have found the names of the nine rivers, send them to me on a POSTAL CARD so that they reach me by May 22nd. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week.

Some of our Little Folks are very careless and make simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the April 24 issue of Pennsylvania Farmer is: CURIOSITY.

The puzzle prize winners are: Helen Bicker, age 11, Cabot, Pa.; John Edwards, age 11, Hegins, Pa.; Helen Eakin, age 11, Van, Pa.; V. Frances Long, age 10, Middletown, Pa.; Anthony Markert, age 8, Wilcox, Pa.; Miriam Scholl, age 10, Mt. Pleasant Mills, Pa.; Vincent A. Shelly, age 9, Quakertown, Pa.; Ruth Troutman, age 10, Brookville, Pa.; Clarence Wilson Watts, age 10, Sellersville, Pa.; Ralph B. Zeigler, age 11, Greencastle, Pa.

Mrs. GERTRUDE S. STEWART

If You Haven't a Supply of Ice

Remember Evaporation on a Surface Cools It

EVEN in a large family where food vanishes with alarming rapidity, it is difficult to keep everything during the hot weather without waste when there is no ice.

One principle which the housewife should remember is that evaporation cools the surface upon which it occurs. This knowledge helps out in a surprising number of ways.

In many country homes an iceless refrigerator is operated with very satisfactory success. This is, primarily, a frame containing shelves and protected with wire screen. On top is placed a large pan containing water, and over the sides hang pieces of heavy cloth such as cotton-flannel, whose ends rest in the water. Capillary attraction draws the water the length of the strips and as this evaporates the contents of the cupboard are kept surprisingly cool. Such a refrigerator should stand in a shaded spot where the air circulates freely such as the north side of the house.

Cool Melons to Eat

Melons are kept cool by placing them on the ground in the shade and throwing over them a piece of burlap or cotton flannel one end of which rests in a pan or jar of water.

This same principle is applicable in a smaller way within the kitchen. Left-over egg yolks, for example, may be kept by placing them in a cup and covering them with a strip of cloth that reaches into another cup of cold water. Place near a shaded window where the air comes in freely.

To have fine crisp lettuce gather it in the late evening or early morning before it becomes wilted in the noon-day sun. Pull it with its roots if possible. Place the roots in a basin of water as one would the flowers of a bouquet, then cover with a cloth that extends down into the water and set in a cool circulation of air.

Uncooked meat can be kept a limited length of time by rubbing the surface thoroly with salt and pepper and then covering with a cloth that is wet in vinegar; if the cloth extends into a dish of vinegar it will keep damp and help in the preservation process. To keep ham, brush the cut surface with melted fat and cover with a vinegar cloth as described.

Milk and Butter, Too

Milk may be kept sweet and butter firm quite successfully by this evaporation method.

The manner in which cooked foods are handled has much to do with their keeping quality. As soon as any food that is intended to be kept for a few hours is cooked it should be uncovered and cooled rapidly. A covering of cheesecloth is much to be preferred to the regular dish or kettle cover as this allows a circulation of air and prevents souring.

Soup stock keeps better if left undisturbed so that the fat forms an unbroken cover for the stock. If the stock is not all used at one time melt the cake of fat that was removed and pour it back into the remaining stock.

Sometimes it is a problem what to do with left-over meat. Baked meat can be warmed quite satisfactorily by covering it with a wet cloth and reheating it in the oven; in this way the surface does not become so dry.

Sometimes the left-over meat can best be utilized in a salad. Remove all bone and gristle at once and cut the meat into suitable pieces. In a mixing bowl place a small quantity of vinegar, half as much salad oil and a seasoning of salt, pepper and onion juice, blend, add the diced meat and mix thoroly. Cover the dish with a cloth and set in a cool place. The meat will keep better in this dressing and will taste better in the salad.

Watch out that too large a quantity of perishable food is not bought or cooked at one time during the hot weather. No housewife is justified in having quantities of good food wasted because the weather is hot and there is no ice.—Alice Margaret Ashton.

An unsightly wire fence, adjoining poultry lots, glorified into a thing of beauty by zinnias, cosmos and wild cucumber vine.

In Blue-Bell Time

IT'S blue-bell time, the season when I am most thankful to live on a farm, the time when I forget the debts, inconveniences and hardships connected with farm life. We are poor and cannot afford to take vacations or trips, so we enjoy the finer things of rural life. Every year when field and woodland are carpeted with velvety green and pretty wild flowers, we take our spring outing. We are too busy during the week, so upon our return from church services on Sunday, we hustle thru mid-day chores, and may soon be seen wending our way, father carrying the picnic lunch.

A Place for Lunch

We first find a log or large stump in a warm sunny place along the creek, for lunch plays a large part in the party. When each lad and lassie feels fed, we are ready for flowers—flowers—flowers, so many kinds we must choose favorites. We pick until our hands are full, and then we fill the basket, too. We gather more blue-bells than anything else because they are so lasting. What fun it is to hunt large Mayapple leaves for umbrellas to shade our bouquets.

We like to gather young ferns, too, to plant in the house gardens, and in the fall, nutting parties and gathering gorgeous leaves provide interesting frolics in the great outdoors. Our children look forward to these events, and have learned to love the great, wide, wonderful world. We are trying to raise them free from discontent—the disease so prevalent among children and grown-ups of this age.—D. A. S., Pa.

Which Walk Is Yours?

I RECALL the time when I was visiting rural homes daily, and two walks I remember very particularly. One was of broad blocks of shining, smooth freestone with the grass kept severely clipped along its edges. Not a flower was permitted near. Always the walk was faultlessly clean. It was the same inside that spacious house; its occupants were always the same—rather severe. I left this home filled with gratitude for the fresh, warm, outside air.

The other walk was merely a length of uneven flagstones gathered from a rocky rivulet near by and placed in position by calloused, loving hands—the kind of walk where grass insists upon growing up thru the stones. On either side, growing quite close, so close that one's skirts stirred their perfume in passing, grew all sorts of gay blossoms, from the brave little snowdrop that pushed aside frosty grasses, to the last little bronze mums—all thru the whole line of old-fashioned flowers such as pinks, peonies, pansies, snapdragons, verbenas, columbines and others.

Inside the humble home at the end of this walk lived an old man with a white beard and kindly twinkling eyes, whose old hat might be lying on the center table, and a dear old woman whose work-hardened hands had a welcoming clasp and whose thimble and thread I might find on the organ with some quilt pieces. A young girl lived there, too, their last child. Memories of this home are as fragrant today as the blossoms which surrounded it then.

Now Is the Time to Plant

Of these two walks, don't you prefer the second? The planting season is here. There are many excellent catalogs listing reliable seeds and nurserymen have many plants and roots ready for selection. Nature's agents—balmy breezes, bright sun, warm days and dewy nights will nurture the plantings you make now. —Gertrude Shockey, Ohio.

Those Small Potatoes

IF you will procure from the ten-cent store, a little brush about four or five inches long and one and one-half inches wide, little potatoes will not distress you so much. In fifteen minutes you can prepare a large kettle of the little fellows by brushing them thoroly using plenty of clean water. It does not take very long to cook them tender, and they can be quickly skinned after cooking. They are very satisfactory for any potato dish requiring cooked ones, such as escalloped potato, hash, potato salad, etc.—Mrs. E. M. Anderson, N. Y.

Linoleum on Table and Shelves

I HAD set my heart on a white porcelain table top. In fact, I had the lower part of the kitchen cabinet in white porcelain selected and was actually hoarding my money to buy it. I did not need the lower part of the cabinet that would be gained for storage, but I was quite enamoured with those white tables—they looked so easy to keep clean—and so shiny. My decision was made.

And then two domestic science friends happened to be guests in my home. Of course, we looked the kitchen over and talked "shop," more or less. I explained to them just how my work table was soon to be discarded and I was to have that gorgeous lower part of the kitchen cabinet—all in white porcelain. I rather expected them to be thrilled—but they weren't. They were neither one enthusiastic about white porcelain table tops because the surface is so very hard, and there is the possibility of breaking dishes, especially when handled by children, and then they are noisy.

The experts suggested covering my perfectly strong kitchen table with floor linoleum — inlaid — to match the linoleum with which the floor is covered.

I followed their suggestions, thereby saving my hoarded money, and I have been more than pleased with the results.

The furniture store man cut my linoleum for me. I had him cut a piece for my broad shelf in the pantry and the work shelf by the sink. This I fastened down with linoleum cement, and then I varnished it with linoleum varnish. I shall varnish it occasionally to prolong the life of the linoleum, just as I do the linoleum on the floor.

I am going to cover my pantry shelves the same way this spring, and also my cupboard shelves. It is so easy to keep clean, and wouldn't that be an attractive pantry?

I am strong for the linoleum covered working surfaces. They are easy to keep clean, hot dishes can be set down on them, it is not so noisy as the porcelain surfaces—and it is attractive in appearance.

While on this linoleum question let me add that I have asked the furniture store dealer to save pieces of linoleum for my basement steps. The pieces do not cost much and wouldn't it make "easy to keep clean" cellar steps?—M. H. M.

Are You a Pal or a Slave?

Take the Time to Be a Friend of Your Children

NOT long ago I was introduced to a mother and daughter who at first glance appeared to be nearly the same age. Involuntarily these words slipped from my lips: "Oh, but you look like sisters!" But they not only looked like sisters, they acted like sisters or chums. They seemed to have so much in common, and several times during the conversation that followed the introduction I found them glancing at each other with amused glances — the kind that show how much two people have in common.

You know of rare instances where this same thing is true—and what a beautiful sort of a mother-daughter relation it is. Age need not be a barrier. Mothers and daughters can be good friends, chums, companions, and have delightful times together.

Relation Should Be Cultivated

This sort of a friendship does not just happen, it needs to be carefully cultivated.

I remember some years ago of going into the home of a friend—an older mother, whose children were then in high school. This mother was a brilliant, capable woman, and fairly gave her life for her home and children.

That morning the children were struggling with Saturday morning housework and I asked: "Is Mother sick?"

"No," said the oldest girl, "Mother isn't sick, but she has been asked to give a talk before the federation of women's clubs this afternoon, and we are making her rest so she will be fresh and do her family justice," and she laughed as I went up to the mother's room with the privilege of an old friend.

She had been doing very little outside of her home and I was rather surprised at her decision to give that talk.

"Well, I am glad that the women of the town are to be favored by your presence this afternoon," I said.

"Oh, I am not doing it for the sake of the women involved," she replied, "but I very suddenly realized that my children were making a slave of me and I feared they would think I did not know anything but cooking and washing dishes.

They Were Delighted

"Do you know they were all delighted to think I was going to do this and the girls have been offering me their best stockings and "undies" —and the boys were both determined I should go down and have a new dress. For the sake of my children I must carry this off this afternoon and I do hope it will be written up in the papers just to impress my children!"

Too many mothers unconsciously become slaves of their families. It is better to let the family be proud of mother—to deliberately set out to make them proud of mother—than to become a mere drudge or slave in one's own household.—May H. Mumaw, Ohio.

Fish Is Rich in Iodine

GOITER is believed to be caused by a lack of iodine in the body. This mineral substance, together with all the others which the body requires, must be supplied in the food we eat.

Salt-water fish are especially rich in iodine, and the use of more fish in the meals of the average family would be beneficial in many respects, says Marie C. Doermann, foods specialist at the New Jersey College of Agriculture. Because of the ease with which it is assimilated by the body, fish is especially recommended for people who are not doing hard physical work.

The markets offer many kinds of fish from which the housewife may choose. Mackerel, sole, haddock, cod, halibut and similar varieties are economical.

Because fish is one of the most common sources of ptomaine poisoning, the greatest care must be used in their selection and care. Fresh fish have bright red gills; clear, open eyes; firm flesh—not flabby. If the scales are dull and come off easily, reject the fish. Frozen fish are put into the freezers fresh and are frozen so quickly there is no chance for decomposition. Thaw fish by placing them in cold water until all the frost is removed, then cook as fresh fish.

Serve vegetables generously with fish—carrots, onions, celery, tomatoes. The highly flavored and tart ones are best because fish are mild in flavor.

Be Honest with Children

THE importance of honesty in handling children cannot be overemphasized. If the early trust and confidence which they have in their parents is carelessly broken down, the props are knocked out of their world, for if what father and mother says is not true, what can be believed? Many times it has a direct bearing on whether or not obedience is obtained. Some parents deliberately deceive their children in an attempt to gain obedience or in the hope of making an unpleasant task or duty less painful in anticipation.

One small lad, tho he had considerable fear of pain under the dentist's hands, went thru the first session manfully, shedding only a tear or two. He dreaded the second visit, however, and continually fretted about it. In order to calm him his mother assured him that "This time he will not hurt you at all." Up to this point the mother had always been right, so he believed her.

The shock was a severe one when it happened that he was hurt more than on the previous visit. His implicit confidence was shattered and he became timid and fearful in new situations and showed an evident lack of trust in the statements made to him. It will be a long time, if ever, before this child regains confidence.

Prize Sewing Hints

I MAKE quilt covers or cases which I tack over my quilts and remove when laundering is necessary. I make them of feed or flour bags (fifty-pound ones), removing the print by soaking over night in kerosene and washing in the regular way. I dye the firm white muslin various colors, finding red, green, maroon, and rose very beautiful in different combinations. These save washing heavy quilts and add years to the quilt's service.

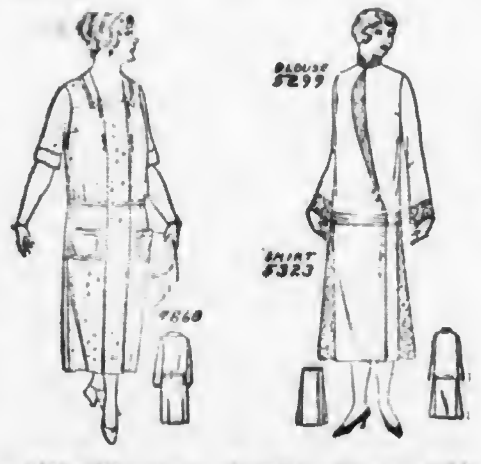
I cut out the worn centers of old towels, bound the two remaining ends, attached dainty apron strings and became the proud possesor of several apron-towels which save me hundreds of steps to the regular towel while doing my kitchen work.

Before working buttonholes I sew around them by machine. This produces a stiff ready-made effect; prevents fraying and eliminates sewing around by hand before working.—D.

Styles to Meet Many Needs

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

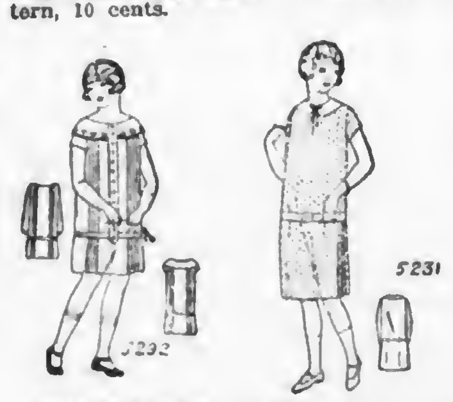
4868.—A Practical Style.—Gingham with facings of linene, or linen, with pipings or bindings in a contrasting color, would be suitable for this model. It is also nice for percale or wool or cotton crepe. Eight sizes: 36, 38, 40, 42, 44, 46, 48 and 50 inches bust measure. A 38-inch size requires 5¾ yards of 27-inch material if made with long sleeves. If made with short sleeves 5⅜ yards will be required. Pattern, 10 cents.



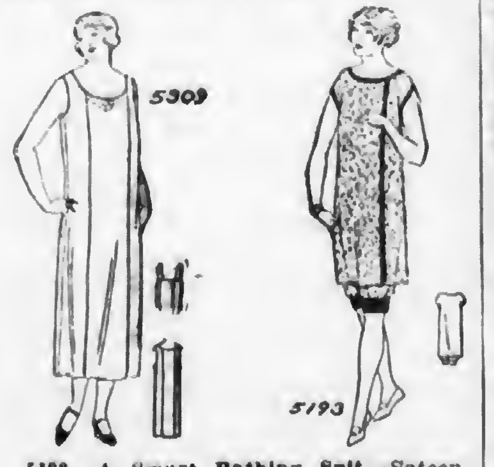
5299-5323.—Very Stylish.—Blouse 5299 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. The skirt 5323 is cut in 6 sizes: 25, 27, 29, 31, 33 and 35 inches waist measure with corresponding hip measure 35, 37, 39, 41, 43 and 45 inches. To make this model as illustrated in the large view will require 4⅜ yards of 40-inch plain material and 1⅛ yard of figured material. Two patterns, 10c each.

5292.—Dainty Summer Frock.—Crepe de chine, georgette, or voile would be attractive for this style. Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 2¼ yards of 40 inch material if made with long sleeves and with bertha. If made with short sleeves and bertha 2 yards will be required. With long sleeves and without the bertha and trimming fold 1⅞ yard will be required. Pattern, 10 cents.

5231.—Neat and Comfortable.—Dotted voile is here shown. Collar and belt may be of linen or organdie. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2⅛ yards of 40-inch material, with ⅛ yard of contrasting material for collar and a 2-inch wide straight belt, if made as illustrated in the large view. With long sleeves 2⅝ yards are required. Pattern, 10 cents.

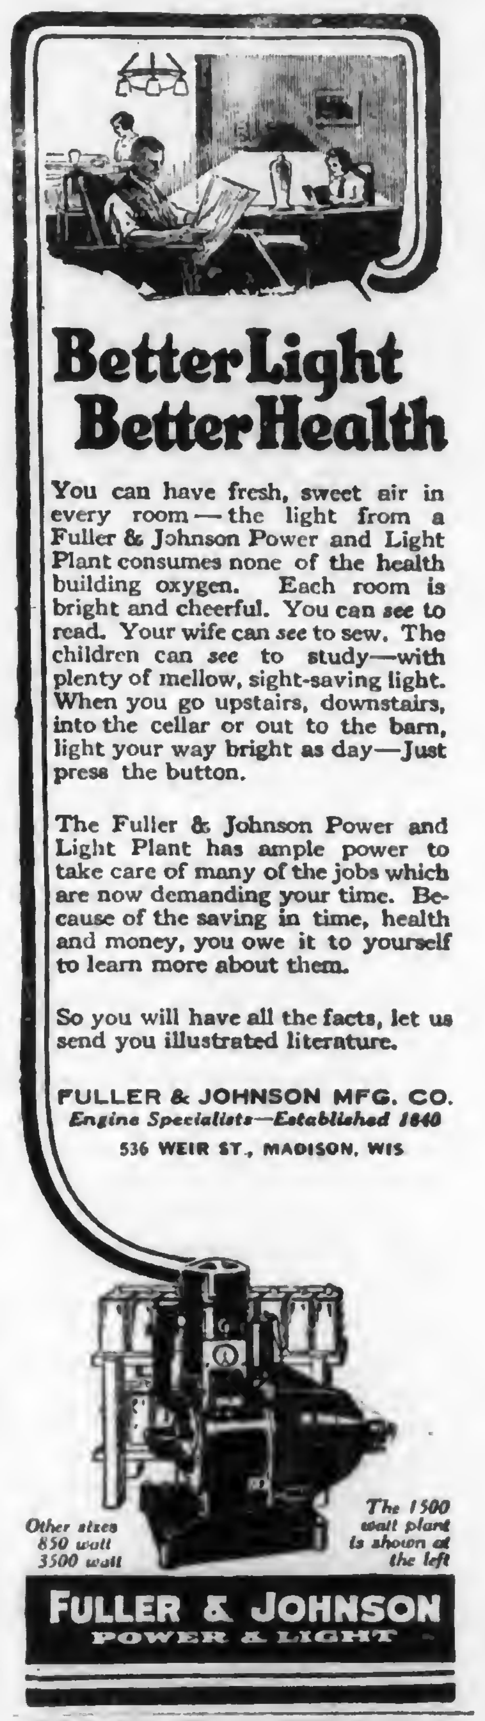


5300.—Practical Undergarment.— This underslip is especially suitable for women of mature figure. It has plait fulness at front and back seams. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3¼ yards of 36-inch material. Pattern, 10 cents.



5193.—A Smart Bathing Suit.—Sateen, silk, jersey weaves, satin or washable broadcloth could be used for this model. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 4⅜ yards of 40-inch material. The smock alone requires 2⅜ yards. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date Spring and Summer 1926 Book of Fashions.



Better Light Better Health

You can have fresh, sweet air in every room — the light from a Fuller & Johnson Power and Light Plant consumes none of the health building oxygen. Each room is bright and cheerful. You can *see* to read. Your wife can *see* to sew. The children can *see* to study—with plenty of mellow, sight-saving light. When you go upstairs, downstairs, into the cellar or out to the barn, light your way bright as day—Just press the button.

The Fuller & Johnson Power and Light Plant has ample power to take care of many of the jobs which are now demanding your time. Because of the saving in time, health and money, you owe it to yourself to learn more about them.

So you will have all the facts, let us send you illustrated literature.

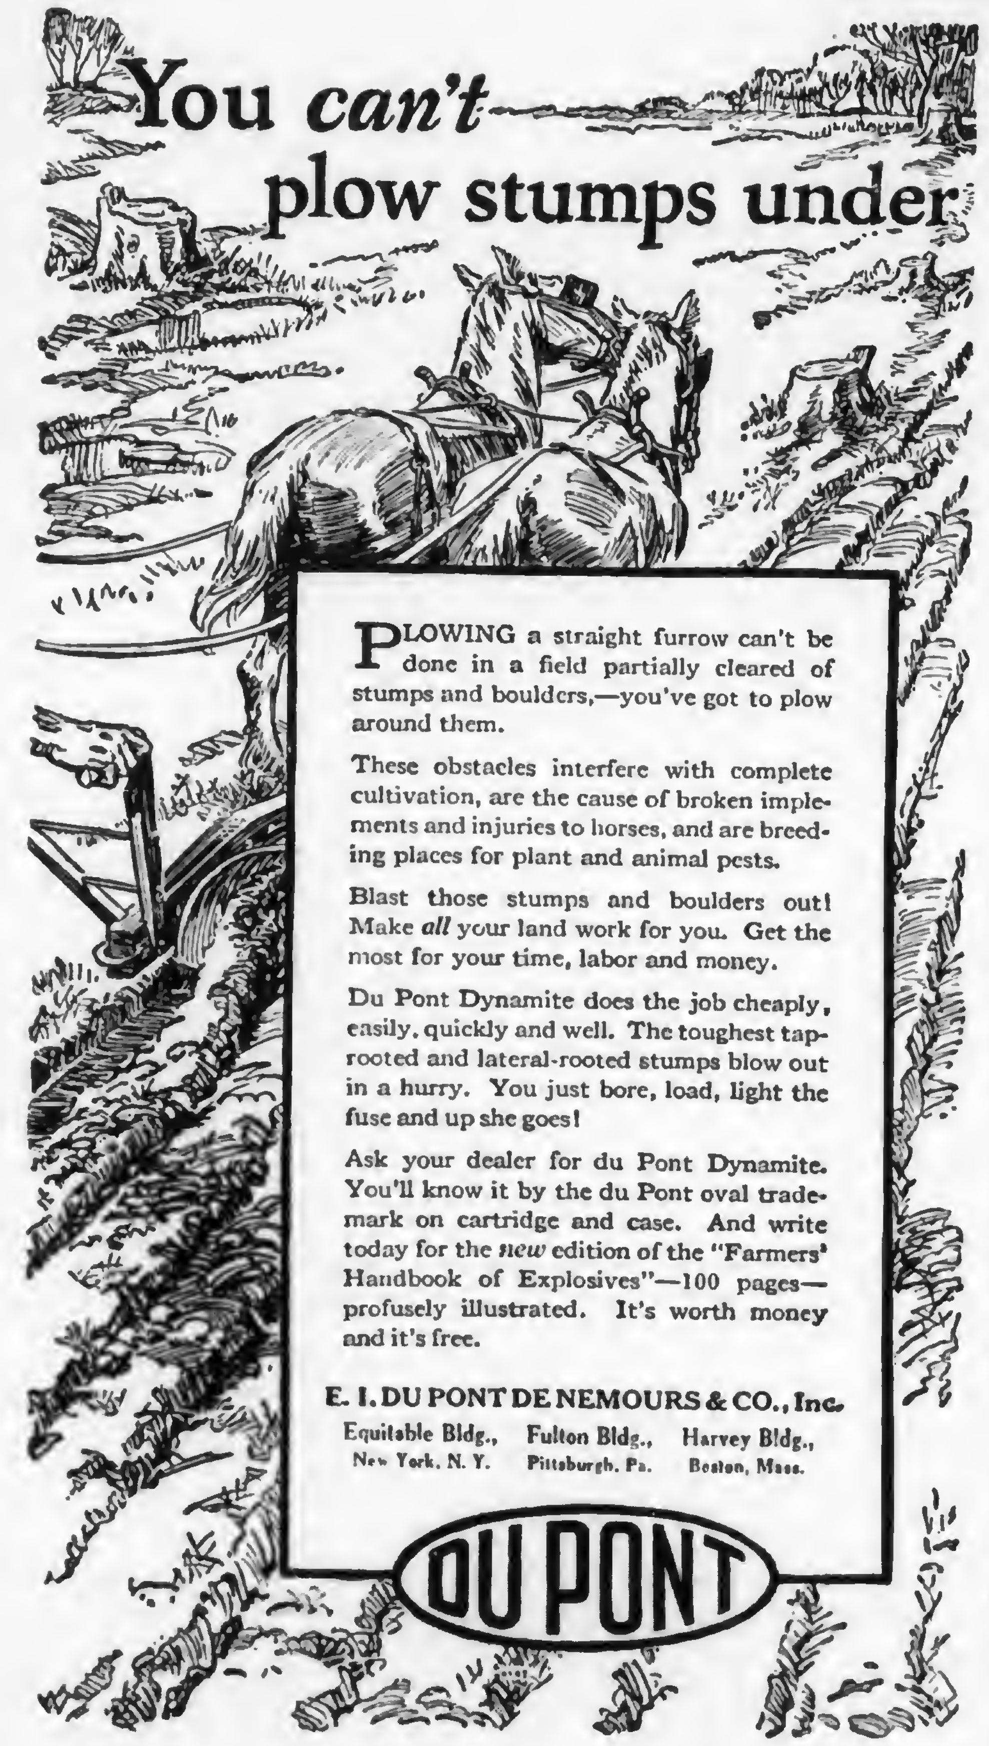
Wool Bed Blankets & Batting

We are now equipped to manufacture your virgin wool into bed blankets and batting at moderate cost to you. Custom work a specialty. Give us a trial
WEST UNITY WOOLEN MILLS,
107 Lynn St., West Unity, Ohio



You *can't* plow stumps under

PLOWING a straight furrow can't be done in a field partially cleared of stumps and boulders,—you've got to plow around them.

These obstacles interfere with complete cultivation, are the cause of broken implements and injuries to horses, and are breeding places for plant and animal pests.

Blast those stumps and boulders out! Make *all* your land work for you. Get the most for your time, labor and money.

Du Pont Dynamite does the job cheaply, easily, quickly and well. The toughest taprooted and lateral-rooted stumps blow out in a hurry. You just bore, load, light the fuse and up she goes!

Ask your dealer for du Pont Dynamite. You'll know it by the du Pont oval trademark on cartridge and case. And write today for the *new* edition of the "Farmers' Handbook of Explosives"—100 pages—profusely illustrated. It's worth money and it's free.

A New White Diarrhea Tablet

Diarrhea among small chicks has become so prevalent that it has engaged the attention of our foremost men of science.

At the instance of Dr. Hess & Clark a group of veterinarians and chemists have made diarrhea in chicks a subject of scientific research.

These men have evolved an entirely new tablet for White Diarrhea—in fact, any form of diarrhea affecting poultry.

Dr. Hess & Clark are now manufacturing this new diarrhea tablet and placing it on the market this season for the first.

You will want this new tablet, which is the last word in medical science for White Diarrhea, either as a preventive or as a remedy.

You can secure this tablet from any Dr. Hess & Clark dealer. Ask for

Dr. Hess WHITE DIARRHEA TABLETS

Then follow these simple directions:

Crush and dissolve just 4 tablets in each gallon of drinking water (one tablet to a quart). Stir once thoroughly, then let your chicks run to it; they will doctor themselves.

Make a fresh solution each day.

Our guarantee covers this tablet absolutely. DR. HESS & CLARK, Inc., Ashland, Ohio.

Care and Management of Young Chicks

From Incubators to Brooders

KEEP a few commercial chick shipping boxes on hand for removing your chicks from the incubator to the brooder. It will save chilling of the chicks. The dark compartments of the boxes each hold enough chicks to furnish warmth without overcrowding. Chicks that cannot see each other cannot form the toe picking habit. The chick boxes are handy if a brooder fire goes out and it is necessary to gather up the flock quickly and give them warmth while the fire is rekindled.

Remove When Hatch Is Completed

If the incubator chicks are removed from the machine when the hatch is completed and stored in the boxes for a day it helps to reduce the dirt in the incubator and allows the operator to immediately clean and spray the machine and trays and refill with fresh eggs. The chicks rest quietly in the boxes until ready to be removed to the brooder.

We place sheets of paper in the bottom of each compartment of the chick boxes and cover them with litter. When the papers are removed the boxes are about as clean as new boxes. So the same equipment can be used for moving the chicks for several years.—R. G. Kirby.

Should Roost Early.

MANY of the young chick troubles can be avoided by teaching the youngsters to roost as early as possible. It is not uncommon to find some that will want to perch on something when only three or four weeks of age and provision should be made for them to do so, providing, of course, that the environmental conditions are favorable. For instance, if the room temperature did not fall below sixty degrees it would be advisable for the chicks to roost as soon as they desired, but if at night the temperature should go down to forty degrees the chances are that the chicks would be chilled, unless under the hover.

If allowed to roost at an early age one should provide roosting sticks from one and one-half to two inches wide so that the chicks could rest their entire body on the stick. If narrower ones were used there would be a tendency for the chicks to have crooked breast bones. By getting the birds on the roost the tendency to crowding will be largely overcome.

The best arrangement for the roosts is to have them extend clear across the rear of the brooder house so that both corners will be filled up. The underside of the roosts should then have wire tacked on it, using a one-inch mesh wire. This will prevent some of the weaker chicks from being pushed off, thus forcing them to seek shelter in the corners.

Keep from Under Roosts

There should also be a wire frame from the front roosting stick to the floor to prevent any birds from getting under the roosts. This frame should be on a slope and have a few cleated supports on it for the chicks to run up on.

If the above arrangement is carried out the chicks will have very little difficulty in learning to roost, in fact one can drive them on the roosts if some seem backward. The wire keeps all the chicks out of the dangerous rear corners and as soon as they all know how to roost the danger of crowding is past.—C. S. Platt.

Pennsylvania's Hay Crop

PENNSYLVANIA ranked fourth among all the states in the production of hay in 1925 and over one-third of her 3,000,000-ton crop was produced in ten counties, according to the Pennsylvania Department of Agriculture. These counties include Lancaster, Bradford, Berks, Chester, Crawford, York, Washington, Tioga, Susquehanna and Westmoreland.

They produced 1,495,180 tons on an estimated acreage of 998,960, or an average of 1.51 tons per acre. The value of the crop in these ten counties was $24,377,461, or about one-third of the state total of $72,657,996.

Only Three States Grew More

New York, Wisconsin and California were the only three states to produce more hay in 1925 than Pennsylvania. While the average yield per acre was greater in California and Wisconsin than in Pennsylvania, the acre yield in New York was slightly less.

Hay, which includes timothy, clover and alfalfa, is the highest valued crop in the Keystone State, with corn and wheat ranking second and third respectively. The high valuation of the hay crop is not generally realized because the crop is largely fed on the farms, and is not popularly regarded as a cash crop such as wheat. Considerable hay, however, is shipped from the surplus producing counties each year to New York City, Philadelphia, Baltimore and the southern states.

The acreage in hay has not changed materially in Pennsylvania during the past forty-five years. In 1880, the acreage was 2,714,909; in 1900, 2,873,126; and in 1925, 3,069,000. There has been a remarkable change, however, in the kind of hay grown. The production of timothy alone has decreased and in its place has come a mixture of clover and timothy or clover alone.

The alfalfa acreage has also increased greatly during recent years, being more than 75,000 acres when the triennial farm census was taken in 1924. This change from timothy to the legume crops is resulting in more satisfactory soil-building rotations, better feeding rations, and a more permanent type of farming.

The following table gives the total production, acreage, and total value of the hay crop in the ten leading counties:

County	Total production (tons)	Acreage	Total value
Lancaster	196,736	112,420	$3,442,562
Bradford	193,570	128,380	2,811,522
Berks	149,349	82,000	2,688,252
Chester	147,809	93,550	2,675,312
Crawford	145,950	116,760	1,731,619
York	141,770	91,470	2,460,951
Washington	130,845	93,320	3,643,070
Tioga	137,470	110,870	1,773,479
Susquehanna	125,000	90,580	1,637,500
Westmoreland	118,664	79,640	2,503,810
Total	1,495,180	998,960	$24,377,461
State total	4,273,080	3,060,000	72,657,996

Dressed Poultry—Chickens, $1.60@2.30; springers, 80c@$1.50 ea; ducks, $1.25@2 ea; guineas, $1.50@1.65 ea; squabs, 40@45c ea.

Vegetables—Asparagus, 10@15c bch; beans, string, 25c qt; limas, 35c qt; beets, 10@15c bch; cabbage, 10@35c hd; carrots, 10c bch; cauliflower, 25@60c hd; celery, 10@20c stalk; cucumbers, 10@15c ea; dandelion, 5c plate; eggplant, 15@25c ea; endive, 10@15c hd; lettuce, 15@25c hd; mushrooms, 30c pt; onions, 10c qt; parsley, 2c bch; peas, 25c qt; peppers, 5c ea; potatoes, old, 50c ½ pk; new, 30@40c ¼ pk; poke, 10c bch; radishes, 5c bch; rhubarb, 6@7c bch; salsify, 10c bch; scallions, 5c bch; spinach, 15c ¼ pk; sweet potatoes, 15@20c ¼ pk.

Fruits—Apples, 15@25c ¼ pk; cantaloupes, 20c ea; strawberries, 30@40c qt.

Grains (prices paid to farmers)—Milling wheat, $1.40; corn, 75c; hay, baled, timothy, $16@17; straw, $10@11.

Feeds (selling prices)—Bran, $39@40; shorts, $38@39; hominy, $36@37; middlings, $43@44; linseed, $61@62; gluten, $41@45.50; ground oats, $39@40; cottonseed, 41 per cent protein, $45@46; dairy feeds, 16 per cent, $34@35; 18 per cent, $38@39; 20 per cent, $41@42; 24 per cent, $46@47; 25 per cent, $49@50; horse feed, 85 per cent, $42@43.

LIVESTOCK

Review of local market for week ending May 8, 1925: Market draggy. Compared with week ago: Beef steers, 15@25c lower; spots off more; best grades showing maximum decline; top, $9; load 1440-lb averages, $8.75; bulk, $8@8.50. Bulls firm, bulk bolognas, $5.75@6.50. Heifers, about steady; no choice offerings. Cows fully steady; canners and cutters strong to 50c higher; bulk, $4.50@5.50. Calves, steady, top vealers, $14.50. Hogs, steady; demand light; top westerns, $14.75; bulk, $11.25@14.50.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)....	$ .41	$ .39	$ .39¼	$ .43
Eggs, fresh gathered extra firsts (N. Y.)....	.31¼	.30½	.30¾	.32¼
Potatoes, 150-lb sacks (Philadelphia)........	5.50	8.37½	...	1.25
Steers, good to choice (Lancaster)...........	9.00	9.00	9.00	9.75
Hay, Number 2 timothy, baled (Phila.).....	24.50	24.50	24.00	18.50
Wheat, No. 2 red winter (Philadelphia).....	1.71	1.78¾	1.76½	1.83½
Corn, No. 2 yellow (Philadelphia)..........	.76¼	.77¾	.78½	1.81½
Oats, Number 2 white (Philadelphia)........	.51½	.52	.52	.58½

Receipts for Saturday's market: Cattle, 5 cars; 4 from Penna, 1 St Paul; containing 113 head, 530 head trucked in from nearby farms. Total, cattle, 643 head, 25 calves, 151 hogs. Receipts for week ending May 8, 1926: Cattle, 28 cars; 22 from Penna, 2 Virginia, 1 St Paul, 1 Ohio, 1 New Jersey, 1 Indiana, containing 597 head; 1280 trucked in. Total: Cattle, 1847 head, 223 calves, 357 hogs, 91 sheep. Compared with previous week: Cattle, 20 cars containing 468 head, 1031 head trucked in. Total: Cattle, 1499 head, 15 calves, 468 hogs.

Steers:—	
Good to choice	$8.75@9.25
Fair to good	8.25@8.75
Medium to fair	8.00@8.25
Common to medium	7.00@8.00
Cows:—	
Good to choice	6.25@7.25
Medium to good	5.00@6.25
Common to medium	4.00@5.00
Canners and cutters	3.00@4.00
Calves:—	
Good to choice	13.25@14.50
Medium	10.00@13.25
Common	5.00@10.00
Hogs:—	
Heavyweights, 200@250 lbs.	13.25@14.00
Mediumweights, 150@200 lbs.	14.00@14.75
Lightweights, 100@150 lbs.	14.25@14.75
Rough stock	10.75@13.25

YORK PRODUCE

Butter and Eggs—Country butter, 45@55c; separator, 50@55c; eggs, 26@30c.

Vegetables—Potatoes, old, 25@60c ½ pk; new, 50@70c ½ pk; cabbage, 8@20c hd; lettuce, 10@25c hd; celery, 8@15c stalk; carrots, 10@15c box, 18c ¼ pk; horseradish, 5@10c glass; onions, 10@18c box, 3@7c bch; beets, 1@5c ea; soup beans, 10@15c pt; lima beans, 35c qt; spinach, 15@20c ¼ pk; turnips, 8@10c box, 15c ¼ pk; new beans, 35c ¼ pk; peas, 40c ¼ pk; asparagus, 8@18c bch; rhubarb, 3@10c bch.

Fruits—Apples, 15@30c ¼ pk, $1.50@$3.50 bu; strawberries, 35@50c qt.

Retail Grain Market—Wheat, $1.90; corn, $1; oats, 75c; rye, $1; bran, $1.90 cwt; middlings, $2.30 cwt.

Wholesale Grain Market—Wheat, $1.60; corn, 72c; oats, 55c; rye, 85c; bran, $38 ton; middlings, $44 ton.

BALTIMORE PRODUCE

Eggs—Market slightly weaker. Closing offerings nearby fresh-gathered firsts, 28c bid 27¾c. Quotations nearby fresh-gathered firsts, free cases, all sections, 27¾@28c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 34@35c; 3½@4 lbs, 35c; Leghorns and other light stock, 30@32c; old roosters, 20@22c; young chickens, large size, fat, 40@42c; Leghorns and other light stock, 30@34c; all kinds poor and thin, 30@32c; springers, 1½ lbs and over, 46@52c; springers, White Leghorns, 40@45c. Ducks, White Pekins, 24@28c; Muscovy, young, 24@25c; puddle, 20@25c. Guineas, young, large, 75@85c; old, 35@50c. Pigeons, young and old, pair, 40@50c.

Butter—Creamery, fancy, 41c; do, choice, 40c; do, good, 39c; do, prints, 41@43c; do, blocks, 40@42c; do, ladles, 34@35c; Md and Penna, rolls, 28@32c; Ohio and West Virginia, rolls, 28@32c; store packed, 28@29c; Md, Va and Penna dairy prints, 28@32c; process butter, 36@37c.

NEW YORK MARKETS

May 10, 1926.

PRODUCE

Butter firm; creamery, higher than extras, 41½@42c; creamery, extras, 92 score, 41c; creamery, firsts, 88@91 score, 38½@40c; packing stock, current make, No 2, 29½@30c.

Eggs irregular; receipts, 3842 cases; fresh gathered, extra firsts, 31@31½c; do, gathered, extra firsts, 31@31½c; do, storage packed, 32@32¾c; fresh gathered, firsts, 29½@30½c; do, storage packed, 31@31½c; fresh gathered, seconds, 28@29c; nearby hennery whites, closely selected extras, 37@38c; nearby and nearby western hennery whites, firsts to average extras, 33@36c; nearby pullets, 30c; nearby hennery browns, extras, 36@37c; Pacific Coast whites, extras, 38@39c; Pacific Coast whites, firsts to average extras, 33@37c.

Cheese steady; receipts, 57,053 pounds; state, whole milk, flats, fresh, fancy to fancy specials, 20@21½c; do, average run, 19@19½c; state, whole milk, flats, held, fancy to fancy special, 26@28c; do, average run, 25@26c.

Live Poultry steady; broilers, by freight, 45@50c; do, by express, 33@55c; fowls, by freight, 31@36c; do, by express, 34@37c; stags, by freight, 25c; roosters, by freight, 20c.

Dressed Poultry irregular; chickens, fresh, 40@50c; do, frozen, 30@46c; fowls, fresh, 30@39c; do, frozen, 30@40c; old roosters, 22@28c; turkeys, fresh, 35@45c; do, frozen, 42@62c.

LIVESTOCK

Cattle—Irregular. Steers, $7@9.75; state bulls, $4@7.25; cows, $2.50@6.25.

Calves—Steady to firm. Veals, common to prime, $6@14.50; culls and little calves $6@7; grassers and fed calves, $5@7.

Sheep and Lambs—Steady. Sheep, $3@9; culls, $2@3; lambs, Ohio, medium to prime, $11@16.25; state, common to prime, $10@16.25; do, clipped, $15.10; springers, 60 lbs, $19 per 100 lbs.

Hogs—Steady; light to medium weights $13.25@14; pigs, $14@14.50; heavy hogs, $12.75@13.25; roughs, $10.50@11.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment: City bran, $35; middlings, $34.50, in 100-lb sacks; red dog, $41, nominal, in 100-lb sacks; western spring bran, prompt shipment, $33; 30-day shipment, $34.10; standard middlings, prompt shipment, $31.50; 30-day shipment, $33.60; flour middlings, 30-day shipment, $37; red dog, prompt shipment, $39.60; 30-day shipment, $40.10, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.10, in 100-lb sacks; cottonseed meal, 36 per cent protein, $39.25; prompt shipment, linseed oil meal, $51.85, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $29; No 2, $27@28; No 3, $24@26; samples, $10@17. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.86¼; No 1 dark spring, $1.81¼; No 2 hard winter, f o b, export, $1.79¼; No 1 North Manitoba, in bond, f o b, export, $1.72¾; No 2 mixed, f o b, export, $1.58¼. CORN, No 2 yellow, 86⅝c; No 3 yellow, 83½c. OATS, No 2 white, 52c; No 3 white, 51c; No 4 white, 49½c; ordinary white, clipped, 50½@52½c; fancy white, clipped, 54@55½c. RYE, c i f, export, 98½c. BARLEY, malting, c i f, domestic, 81½@84½c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Good and high grades fed steers fully steady; lower grades of killing steers and meaty feeders, weak to 15c lower, mostly 10@15c off; other stockers and feeders steady; week-end country demand fairly broad; extreme top heavy steers, $10.40; yearlings, $10.25; choice light yearlings scarce; active; lightweight heifers, $9.90; good and choice fat cows and heavy heifers mostly 25c lower; canners, cutters and common cows strong; bulls, 25c lower; vealers mostly steady. Week's bulk prices follow: Fed steers, $8.40@9.65; fat cows, $5.75@7.25; heifers, $7.25@8.85; canners and cutters, $4.75@5.25; veal calves, $9@10.25; stockers and feeders, $7.25@8.50.

Hogs—Desirable 180 lbs down, $13.85@14.20; latter price top; better 200@225-lb weights, $13.50@13.75; 240@325-lb butchers, $12.90@13.45; packing sows mostly around $12; choice killing pigs up to $14.25; shippers took 1000 head; estimated holdover, 2000 head; heavyweight hogs $12.80@13.40; medium, $13.10@13.75; lights, $12.70@14.10; light lights, $12.85@14.25; packing sows, $11.90@12.35; slaughter pigs, $13.50@14.25.

Sheep—Compared with week ago: Fat clipped lambs, 30@75c higher; wool lambs, quality considered strong to 25c higher; spring lambs steady to strong; fat aged sheep, 50@75c lower. Week's top prices: Fat wool lambs, $16; shorn lambs, $15; Calif springers, $16.75; natives, $17.50; fat wool ewes, $10.50; clipped ewes, $9.50. Bulk prices follow: Fat wool lambs, $15@15.75; clipped lambs, $13.75@14.75; clipped ewes, $8.50@9.25; spring lambs, $16.25@17.

WOOL MARKET

Boston, May 8, 1926.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 44@45c; ½-blood combing, 41c; ⅜-blood combing, 43@44c; fine unwashed, 38@40c. Michigan and New York fleeces—Delaine, unwashed, 43@44c; ½-blood combing, 43c; ⅜-blood combing, 43@44c; ¼-blood combing, 42@43c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@41c; ⅜-blood, 42@43c; ¼-blood, 40@41c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 8, 1926.

Cloverseed, cash, domestic, $21; Imported, $14.35; October, $16.60. Alsike, cash, $17. Timothy seed, cash, $3.35; September, $3.50.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 10th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$33.50@35.00
Spring bran	32.75@33.50
Soft winter wheat bran	34.50@37.50
Hard winter wheat bran	33.50@35.00
Standard middlings	31.50@32.50
Soft winter wheat middlings	34.20@37.00
Flour middlings	35.50@39.00
Red dog flour	39.50@40.50
White hominy	32.00@32.50
Yellow hominy	32.50
Gluten feed	39.35
36 per cent cottonseed meal	38.50
41 per cent cottonseed meal	40.50@40.75
43 per cent cottonseed meal	42.50
34 per cent linseed meal	54.75@55.30

Millfeed in light demand and with production limited due to restricted operation of mills.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton), for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Feed Market Situation

FEED prices ruled barely steady during the week ending May 6 on account of the weakness in wheat by-products, altho other feeds were steady to firm. Trade reports were that large amounts of wheat for Buffalo were available in lake ports but had been unable to move for sometime on account of the ice. Only small amounts of all rail wheat were arriving at Buffalo.

Linseed meal held practically unchanged with demand fully equal to the light offerings. Substantial amounts of Argentine flaxseed continue to be received weekly at New York and a large proportion of the Canadian commercial stocks, which now total 3,500,000 bushels, are expected to come to United States ports when navigation opens. Production of meal, however, continues light on account of a slack demand for linseed oil and mills were generally behind on shipments.

Cottonseed meal averaged steady to firm. Most mills were nearly completing their season's crush and demand from northwestern dairymen was reported active.

Corn feeds were irregular. Trade reports indicated that demand for gluten feed had not been active at most points. Hominy feeds were meeting only a moderate demand and the market showed an easier tone at most points.

Alfalfa meal made further slight advance. Warehouse stocks at Kansas City were low and new hay was not expected until June 15, while demand was good from feed mixers. Many mills were closed for the season and available stocks of meal appeared light.

Tankage continued firm at most markets with current demand absorbing the rather limited production, but a small surplus was accumulating at South St. Paul and prices there were reduced $5 per ton to $60.—U. S. Bureau of Agricultural Economics.

County News and Comment

Armstrong County, Pa.—May has opened with two days of magnificent weather. Wheat, rye and pastures, as well as meadows, have "greened up" very poorly. Most clover seed was sown during March and much disappointment is expressed over the outlook. Most oats have been seeded but few plots are up. Nearly all garden seeds have been sown. Some potatoes have been planted, mostly certified seed; varieties chiefly Russets and Rural Whites. The acreage will be less than last year on account of high cost of seed. Corn planting will begin this week. There is promise of a seventy-five per cent normal fruit bloom on apple, peach, pear and cherry trees while plums show about fifty per cent. Many farmers have fed their corn cribs empty and are now depending upon commercial feeding stuff. A great many are complaining about a short milk supply. Unfortunately not many cows were bred for spring freshening. Many litters of pigs are now coming but they are low in number, ranging from three to six. Young chick hatches are disappointing. A goodly amount of grafting has been done and all preliminary or dormant spraying has been finished. Prices: wheat, $1; rye, $1.10; shelled corn, 90c; oats, 50@75c, the latter price for seed; potatoes, $3@4; good butter, 45@50c; strictly fresh eggs, 35c.—W. M. P., May 3.

Bradford County, Pa.—Weather becoming quite mild. Cold, damp weather remained later than usual and spring work somewhat delayed. Very little field work done as yet. Farmers busy building fence and caring for stock; some are working on the road. Roads in good condition. Our county gets several miles of hard surfaced roads again this year. Chick raisers in their busy season now. Many dairymen are running short of hay and ensilage. Pastures come slowly. Winter grains on the hills suffered considerably. Some fields entirely killed. Considerable interest is being displayed in the coming primary election—chiefly in the races for senator and representative. The public favors the candidate for dry law enforcement and good roads.—G. E. E., May 3.

Centre County, Pa.—Weather has been unusually cool. This morning grass was stiff with frost and ice had formed on shallow water. Farmers busy working at oats and potatoes. Two new Holstein bull associations have been organized in this county. This places Pennsylvania well in the lead in this phase of progressive dairying, with a total of forty-three associations. Spring lambs are bringing 18c lb.; veal calves, 10c; chickens, 30c; eggs, 25c; butter, 35c; oats, 35c; corn, 70c; wheat, $1.65.—A., May 5.

Clearfield County, Pa.—With the exception of two days, weather cool. Frequently we have frost and some mornings ice formed. No rain for a while and plants set in field are suffering. Most of oats is sown and corn fields are being prepared rapidly. About the usual acreage is being planted in spring crops, with a tendency to venture dangerously far in potato growing. Pastures are short and most of stock is out as roughage is scarce. Lime and fertilizers are being applied in usual amounts, with a slight move toward the use of complete fertilizer. Markets are dull as the coal trade slackens and prices declining on many commodities. Butter, 50c; eggs, 35c; potatoes, $2.50@3; apples, $1@1.50; turnips, $1; dressed hens, 25@35c; poor hatches of eggs are reported so far.—D. H. W., May 4.

Frederick County, Md.—Weather for April unusually cool and greatly retarded growth. Stand of grain is generally good and should make a fair crop. Grass very thin and from present indications hay will be scarce. Oats practically all planted and farmers busy plowing corn ground. An extra large acreage of corn will, in all probability, be planted this year, as quite a few farmers are plowing up grass that if the stand had been good would have been left for hay. A $500,000 merger of the warehouses of Frederick County by the Frederick County Cooperative Association has been temporarily, and if not permanently, abandoned due to a lack of funds. Prices of farm produce remain about the same.—R. J. W., May 3.

Fulton County, Pa.—Weather for past month has been unseasonably cold. Some corn planted but the majority of farmers expect to plant during first of May. Cherry and peach trees are in bloom. Frost on April 27 did considerable damage in some orchards. Owing to long feeding season, many farmers are buying hay. Pasture has made very little show as yet. Oats about all sown. Baby chick business now at its height with prices a little higher than last year. Market quotations: eggs, 25c; butter, 40c; veal calves, 12c; pigs are high in price and but few for sale.—T. H. T., April 28.

Lackawanna County, Pa.—April was cold with freezing weather. Wet weather a hindrance to farm work. Oats not all sown. Some have not finished plowing for oats at this time. Poultrymen are having hard luck this spring with baby chicks. Woods are leafing out and meadows look green. New seeding looks good. Farmers are very busy hauling manure and lime and getting the summer supply of wood sawed. Some farms have changed hands and there have been a few sales. Spring pigs are selling for $12@13 pair. Potatoes, $3.50@4 and new ones, $1.36 pk.; eggs, 45c; butter, 43@45c.—E. A. K., May 6.

Lycoming County, Pa.—Due to sudden change to warmer weather farmers find spring work so plentiful that it is a question what to do first. The slight rains have been a benefit but the country needs a good, heavy, warm rain to make the grass and winter wheat grow and hasten the garden and fruit blossoms along. Trout fishermen are very busy. Potatoes have of late been "ballooning," having reached $1.00 per peck at the farm. Eggs, 35c; butter, 55c; corn, 80c; rye, 80c.—C. I. C., May 3.

Montgomery County, Pa.—Spring work is about three weeks late. Most all the oats is sown and some plowing for corn is done. Hay outlook is very poor, many fields are being plowed. Wheat in general looks excellent. Many soy beans will be sown. Young chicks are doing well but very poor hatches are reported by many poultrymen. Dairy cows and pigs are high and in great demand. The high price of seed potatoes has not hindered planting. Prices: wheat, $1.65; oats, 70c; corn, 75c; eggs, 35c; butter, 50c; chickens, 30c; calves, 13c; old potatoes retail at from $4.50@5.—C. N. D., May 3.

Sullivan County, Pa.—Extremely warm weather for the past week has hastened an otherwise belated spring. Gardens about all planted. Farmers have all the oats ground plowed and nearly all their corn ground. Very few have drilled oats. This year marks a record year in fertilizer sales. Farmers are investing heavily. The stock has wintered well and many will soon be turned out on mountain pastures for the summer. A cement road is being built thru Sullivan County from Muncy Valley to New Albany. Some prices: buckwheat, 90c; corn, $1; wheat, $1.75; butter, 50c; eggs, 28c.—W. G., May 1.

Susquehanna County, Pa.—Not much rain in April. Roads are being worked but frost is not all out and it is hard traveling for autos. Winter grain and grass has begun to show result of deep blanket of snow for three months. Spring plowing well started. Many farmers did some plowing last fall. Fences are in bad shape after the hard winter. Sheep and lambs are doing nicely but they are not safe when out on pasture on account of the many stray dogs roaming about the country. Wood cutting about all done. Cows very high in price on account of scarcity caused by the T. B. test. Good cows bringing $125@150 at sales. Pigs scarce and bringing $12 per pair when six weeks old. Too cold and cloudy for trout fishing. Butter, 50c; eggs, 26c; dressed veal, 18c.—J. A. G., April 28.

Union County, Pa.—Oats all seeded and coming up nicely in spite of dry weather. Sod has mostly been plowed for corn, harrowing done and some corn planted as well as many potatoes, tho the acreage of potatoes will not be increased over last year as seed is too high for the risk of lower prices next fall. Many wheat fields show a very poor stand. Grass fields for hay have many bare spots in them. A light frost this morning may have hurt the apricot and plum blossoms which made a good showing for a crop. Paul Ilgen is erecting a big slaughter house and an artificial ice plant at Brook Park, south of F. E. Brown's stock yards. The Union National Bank of Lewisburg is furnishing the money to buy a carload of T. B. tested cows for farmers who wish to buy cows now. One man from the bank, the county agent, and a man from State College are this week buying the first carload to replace those killed after the first test. Roads are being scraped. The first spraying of apple trees was done in a few orchards only, as it was too windy most of the time for such work. Prices: wheat, $1.65; corn, 70c; oats, 35c; eggs, 24c; potatoes, $2.25; veal calves, 12c.—J. N. G., May 5.

York County, Pa.—April has been unusually cold and everything is backward. Nearly all the plowing is done and farmers are busy planting potatoes and sowing oats. The acreage of potatoes will be smaller this year than usual on account of the high price of potatoes. Wheat has made a good start and is looking fairly good at this writing. The spring crop of pigs seems smaller than the demand and in consequence pigs at weaning age are very high in price. Sales are reported at prices ranging from $6 to as high as $9 apiece. The price of fat hogs is not as high in proportion as the price of pigs; $13.25 cwt., liveweight, seems to be the top. Wheat, $1.65; corn, 77c; oats, 42c; chickens, 30c; eggs, 26@28c; four per cent milk, $2.50; potatoes, $2.75.—W. K., May 3.

Exploring Delmarvia

(continued from page 3)

plants every year, the W. F. Allen Company and E. W. Townsend and Sons. Together they will dig and ship more than 300 acres of strawberry plants this year. The Townsend firm had dug and shipped two and one-half million plants in the four days preceding our visit. Even tho this work is done on so large a scale, it is done with the utmost care. Every plant must come up to a high standard of quality before it can be tied in a labeled bundle with twenty-five others, and packed in damp moss for shipment.

As we walked into the office of the Allen farm we noticed a patch of jointed, reed-like plants, that might have been transplanted from the tropics. They were ten or fifteen feet tall and were covered with green leaves that evidently had been on all winter.

"What are those plants growing beside your office?" we asked Mr. Allen, who, with his two sons, runs the immense strawberry plant business and operates several hundred acres of peach and apple orchards.

"You should know what they are," he said with a laugh.

"If you took off the leaves and bleached out the green color of the stalks they would look like bamboo fishing poles," we ventured.

"That's what they are, bamboo," said Mr. Allen. "That whole patch grew from just one stalk."

Mr. Allen gave us another surprise when he said there hasn't been a week during the last two winters when he hasn't been able to dig strawberry plants. The plant shipping season opens in November and lasts until early summer.

Of course, there is freezing weather and snow on the Eastern Shore, but the snow melts within a few hours and if the ground freezes it thaws out again very soon.

A single day's parcel post shipment of strawberry plants from an Eastern Shore nursery. They go to nearly every state.

Not all of the strawberry plants on the Eastern Shore are dug up and sold by any means. Enough of them are left to produce strawberries by the trainload. Last year Marion Station, not far from Salisbury, shipped 461 refrigerator carloads of strawberries, 374 of them during May and the remainder in June. Pittsville shipped 169 carloads, and Selbyville, 232 carloads. The shipments from several other towns in this section approached these figures.

The total shipments of Del-Mar-Va strawberries in 1925 by rail and motor truck, amounted to 964,320 crates or 30,858,210 quarts. And that was only one of the crops produced by this little strip of land that is hardly seventy miles across in the widest place. We have said nothing about the prices the growers get for these berries, because they are early berries,—that's all that needs to be said.

Even as early as our visit the railroads were moving in long strings of refrigerator cars to handle the 1926 berry crop, and immense refrigeration plants were busy making ice to keep those cars cool on their way to market.

Acres of Irish Potatoes

Approximately 65,000 acres of early Irish potatoes have been planted in the two Virginia counties at the lower end of the peninsula. Under normal conditions they will be dug and marketed early in July. Many of these potatoes are shipped to Philadelphia and New York by motor truck. Truckloads from Cape Charles reach New York in thirteen hours.

Del-Mar-Va's sweet potato shipments last year amounted to 3,475,000 bushels which sold at a price averaging about $2.00 per bushel. More than 750 carloads of sweets, most kiln dried, or stored, were shipped from Laurel, Delaware. About 3500 cars of sweets left the two Virginia counties.

These statistics don't mean that every inch of land on the Eastern Shore is producing bumper crops. The fact is, the peninsula is a great undeveloped territory of almost limitless possibilities. Great areas are yet to be brought under cultivation. Modern machinery and methods haven't appeared in some sections, but they will perform miracles if given a chance.

Business Men Help Farmers

This country is very fortunate in having far-sighted business men who are willing to roll up their sleeves and work hard for the best interests of the farmers. We spent a very profitable hour with Mr. Fred P. Adkins, a Salisbury business man, who has a deep understanding of Eastern Shore farm problems. He has done much to help fruit and vegetable growers improve their marketing facilities and get top prices for their products.

Now we have exceeded our space allowance without telling about half the things we wanted to. We haven't mentioned the mules with their rope harness, the quaint southern towns with their relics of slavery days, the soaring turkey buzzards, the thousands of acres of fruit trees, the holly, the mistletoe in the cypress swamp, the fig orchard, the "shats" (pine needles) used for bedding and fertilizer in the southern counties, Salisbury's fine hotel, nor the many friendly people we met.

But no short article could do justice to the Delmarvia Peninsula. One can appreciate its beauties and realize its great possibilities only by exploring it for himself. We recommend an automobile trip down the Eastern Shore as a vacation tour for readers of Pennsylvania Farmer.

225 Ribbons——79 Firsts——13 Championships
Won by

2 Senior yearling sows that were 1st and 2nd at the National and 8 other shows.

BRIGADIER DUROCS

on the 1925 show circuit is proof conclusive of their winning ability. They have won The Breeder's Aged Herd class at the International for 3 successive years, Grand Champion Sow for 2 years and Get of Sire 2 years. Our Senior yearling sows have stood first and second at every show including The National, The International and the Illinois and Ohio State fairs.

Quality, breediness, and feeding capacity—the sort we breed. 600 ribbons in 3 years—every animal of our own breeding. The 4 highest ton litters in Virginia this year in the hands of 3 different breeders were of our breeding.

Choice young boars priced within the reach of all.

Head of the Department of Animal Husbandry, Pennsylvania State College

Horse Breeding

I have been thinking of starting horse breeding and marketing and would be glad for any information you can furnish about the best breed, location, market, etc.—C. S. H., Venango County, Pa.

In selecting a breed of horses for a breeding establishment, personal preference is one of the important factors. The same condition that prevails with all classes of livestock is true with horses, namely, "there is no best breed." One breed may have some outstanding qualities not possessed by the other breeds but it may be lacking in some other respect.

The leading breeds of horses in the United States at present are Percheron, Clydesdale, Belgian and Shires. In point of numbers the Percherons lead, followed by the Belgians, Shires and Clydesdales in the order named. The Belgians are rapidly increasing in numbers.

Get All Information Possible

My suggestion would be to get all the information you can about each breed and then decide which to adopt. Information about the breeds can be secured by writing the secretary of each record association. The Percheron secretary is Ellis McFarland, Union Stock Yards, Chicago, Illinois; the Belgian secretary is J. D. Conner, Jr., Wabash, Indiana; Clydesdale secretary, E. N. Wentworth, Union Stock Yards, Chicago, Illinois, and W. G. Lynch, Tonica, Illinois, is secretary of the Shire Association.

It is a difficult matter to state definitely where you should locate a breeding establishment. There are several important points to be kept in mind in seeking a location.

In the first place the farm should be easy to reach by train and automobile. For this reason it is important that the farm be located near a city with good transportation facilities. To locate the farm on some branch railway with poor train service would be a handicap. Good shipping facilities are very essential. It is also desirable to locate on some main highway because it affords an opportunity to call the attention of many thousands of people passing to the livestock kept on the farm, all of which can be done at little or no expense.

Plenty of Pasture Land

The farm selected should have plenty of good pasture land. Fields should be available to grow grain and hay crops. Farm grown feed must be used to a very large extent in conducting a successful horse breeding establishment.

The best commercial horse markets are found in the eastern territory. Some of the best draft horses purchased on the Chicago and other western markets are on orders for cities and farms in New England, New York, New Jersey and Pennsylvania. The select trade from these states demands high class horses at top market prices.

The increased demand for good horses and the decrease in the number of horses on farms during the past few years should make it possible to build up a successful horse breeding establishment in connection with a general farm.—W. H. Tomhave.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Curing Clover Hay

Will you kindly inform me as to the best method to follow in handling a crop of clover? My experience has been that I usually lost most of the leaves and blossoms by attempting to cure it enough to put in the barn, by leaving it in the swath. I have under consideration putting it into cocks and capping with canvas. How many caps to the acre do I need providing it cuts at three tons?—R. C. L., Luzerne County, Pa.

Assuming a yield of three tons of field-cured red clover hay, sixty to eighty caps would be required, depending on the size of the cock made.

The curing of clover hay in such fashion as to prevent the loss of any considerable portion of the leaves is not very different from that used in the curing of alfalfa. This involves allowing the hay to wilt in the swath. It is then tedded, or turned with the side-delivery rake before the leaves on top die. In favorable weather rake into windrows and allow to cure. In unfavorable weather hay can be put in cocks for curing after wilting in the swath. Where the hay-loader is used, raking into windrows is entirely satisfactory in most cases.

Farmers' Bulletin No. 943, United States Department of Agriculture, Washington, D. C., entitled "Hay Making," and Farmers' Bulletin 977, entitled "Hay Caps," may be had on application to the department at Washington, D. C. They contain information that may be quite serviceable to you.—J. G. Lipman.

Chicken Manure on Corn

I am planning to put chicken manure on my corn this spring. Would you kindly tell me what else to put with it to produce a good crop, and about how much to put on per acre? The worms work at my corn. Would it be wise to put a little salt with manure, or what else would be good for worms?—A. P. H., Columbia County, Pa.

For each 1000 pounds of the manure apply 100 pounds nitrate of soda, 200 pounds sixteen per cent acid phosphate, and twenty-five pounds muriate of potash. The fertilizing materials may be mixed with the manure or they may be mixed separately and applied after the manure has been distributed. The manure and fertilizer together—1325 pounds per acre—will give you a fertilizer about equivalent to 500 pounds of a 4-8-3 fertilizer. This should be a satisfactory fertilizer for corn if the land is in fairly good condition.

Do not add salt to this mixture for worms. If you will describe the worms and the nature of the damage which they do, we can better advise you on this point.—A. W. Blair.

YOU need your horses every day. Watch carefully for strains, bruises and minor ailments. And be sure to keep Gombault's Caustic Balsam on your shelf—ready for instant use. For over 41 years it has been famous as a remedy for Sprains, Spavin, Splint, Capped Hock, Curb, Fistula, Thoroughpin, Shoe Boils, Poll Evil, Wire Cuts and Muscular Inflammation.

Apply it yourself. Just follow directions that come with bottle. Much better than firing and doesn't discolor the hair or leave the slightest scar. Don't let your horses suffer from something you can cure yourself. Buy Gombault's Caustic Balsam today. $2.00 at all druggists, or direct from us on receipt of price. The Lawrence-Williams Co., Cleveland, O.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

PINK EYE.—I would like to know what ails my horses' eyes. First, one became troubled with its right eye. It became swollen, had a mattery discharge and was somewhat inflamed with a milky film covering the dark of the eye. It went to the left eye and now the other horse is affected in the same way. Horses eat well and seem to be all right excepting their eyes. I feed timothy hay, corn and oats. Would like to know the cause and cure.—W. M. P., Forksville, Pa. Your horses are apparently suffering from pink eye, a contagious condition. Care should be exercised to prevent its spread to other animals. Bathe the eyes in warm boric acid solution twice daily. While the inflammation is most acute, the horse should be stabled in a dark stall as bright light or direct sunlight is injurious. Blindness may result from these infections of the eye.

LUMPY JAW.—I have a registered cow with lump jaw contracted about three months ago. One veterinarian tells me it can be cured by scraping as soon as she has calved (in four months). Another tells me it can't be done. Which is right? How contagious is it?—E. C. B., Fredonia, Pa. Lumpy jaw or actinomycosis usually improves with proper treatment. This consists in removal of growth where possible, local applications for cauterization of the wound and internal medication. Potassium iodide is given in small doses. This should be given under the direction of your veterinarian in order to avoid any chance of overdosing.

HYSTERIA OR FRIGHT DISEASE.—A friend of mine has a dog that has fits. He is a young shepherd dog. Can you advise what to do for him?—J. F. C., Altoona, Pa. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates, such as potatoes, white bread or macaroni, over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. Dogs need meat as that forms an essential part of the diet if dog is allowed choice of feed. Your veterinarian should be consulted and an attempt made to determine the cause of the trouble. If it is due to faulty diet, this can be changed. If due to parasites, these can be controlled by the use of the proper worm medicines.

RABBIT HAS SORE EARS.—I wish to ask you why my white female rabbit has sore ears? This does not seem to be contagious as I had her with the male and he has no symptoms of it. The disease seems to start deep in the ear and works upward. The ear is very much inflamed and is pasted up with matter. She has had the sore in her ear for some time but it is only the last few days that she seems sick. I am feeding her oats and greens of all kinds and every once in a while apple bark. I put vaseline in the ear several times but it does no good.—W. R. S., Cressona, Pa. This may be infection requiring careful cleaning of the ear daily. The deeper portions of the ear may be swabbed with a piece of cotton on a small stick, using boric acid solution. The ear should be dried following this treatment. The soreness may be due to ear parasites causing a condition described as ear mange. You should take this rabbit to your veterinarian for a careful examination.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

MANAGEMENT WINS

Improved Methods Increase the Profits from the Farm

DURING this period of agricultural depression the farmer who rents, and the owner who carries a heavy mortgage has been obliged by stern necessity to study details of management as never before. The owner of a farm who is free from debt has in many cases not made the real progress in developing better methods that his more disciplined neighbor has. The profits that have been made in the past five years, traceable directly to improved management, have a real significance to all farmers.

The case of one northwestern Ohio farmer, whose operations could be duplicated by the thousands in Pennsylvania, New York, and other eastern states is worthy of study. Records of his operations have been carefully kept since 1921—when he lacked $400 of enough to pay his labor bill and four per cent on his investment. These records have all been carefully checked by a farm accounting expert.

One Year Made a Difference

In 1922 this owner began to use better methods. As a result he paid his interest and had $191 left for his labor income. In 1923 his labor income above interest was $1,124.

Each year he had his house rent, part of his fuel, and a fair share of living from the farm.

In 1924 his labor income, above interest was $1,793, and last year it was $2129, after all expenses and interest on his investment were deducted.

What was the reason for these gains? A part of the low income of 1921 and 1922 was due to low farm prices. Yet the increase in farm income of the last three years was more than doubled, and cannot be accounted for by increased farm prices.

The improved returns were due to better management. Market changes were introduced in all lines of production, tho none were radical.

The first change was the sale of one poor cow, which was replaced by two good ones. The poultry flock was culled and more attention given to marketing the eggs. These changes brought in a better return for each dollar spent in feed; egg sales per hen went up to $3.85 in 1925. In previous years they had run from 78 cents to $1.73.

Studied the Hog Cycle

By studying the hog cycle, and the markets, the farmer was able to market a nice bunch last year when prices were near the top. Do you know that probably after this year the hog cycle will be on the downward trend for three years?

Crop changes were also made. Soy beans were introduced in 1923 and a small acreage of sugar beets was started.

As farmers were moving to town and land became easy to rent, he rented forty-nine acres of land last year, expanding his business cautiously. Cash expenditures went up, yet cash receipts were doubled. In 1924 and the preceding years cash farm expenses had been around $600 to $680. With the increased acreage the expenses were $899, the chief item being for labor, tho he depended largely on his own labor.

No fancy farming or specializing was indulged in, like seed production, spring lambs, or fruits. These figures were chosen because they were typical of the average farmer's experience. There are very few farms in the country that could not bring in more profits per year if details were scrutinized, costs trimmed, and improved methods introduced. That is the sort of thing the successful merchant is doing every day.—M. G. F.

You want all of these features in your next car

Oil Filter
Air Cleaner
Fisher Body
Duco Finish
Four-Wheel Brakes
Harmonic Balancer
Full Pressure Oiling
Unit Instrument Panel
Automatic Spark Control
Advanced Six-Cylinder Engine
Light Dimmer on Steering Wheel
Interchangeable Main Bearings

but how much should you pay to obtain them?

A motor car lacking these features cannot possibly give you the utmost in luxurious motoring.

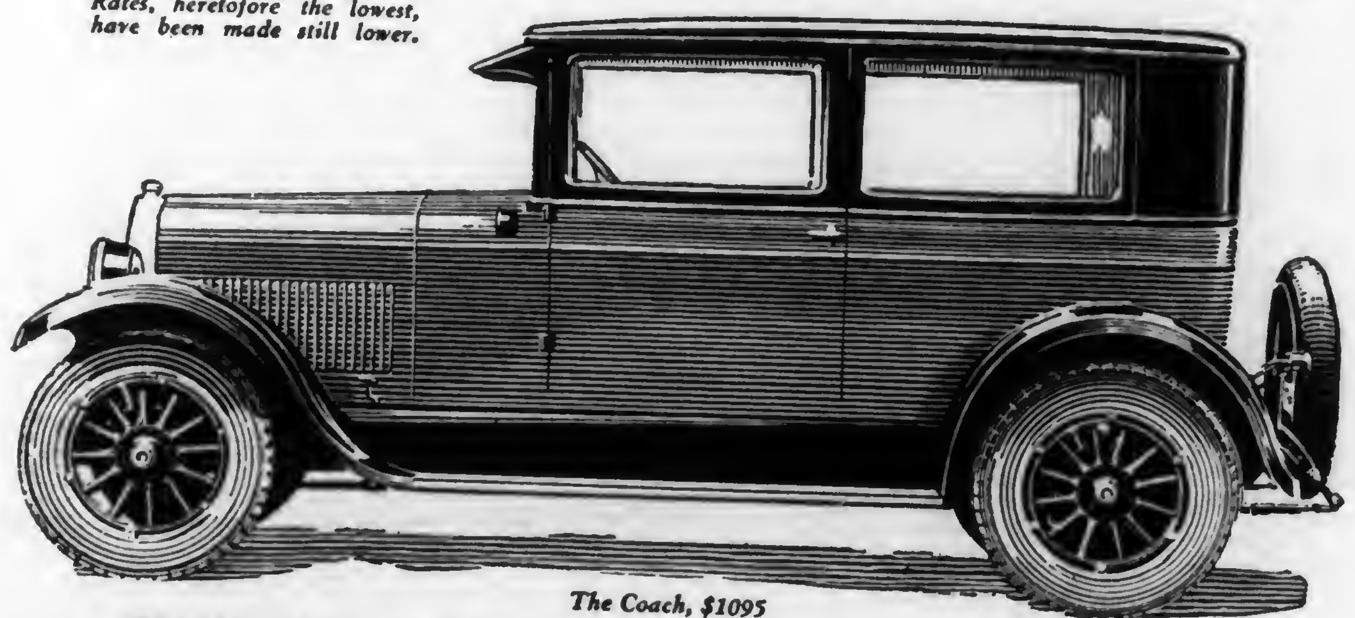
A motor car possessing them but listing at an excessive price, violates your desire for economy.

In between these extremes lies wise investment.

The Oakland Six not only embodies virtually every advanced engineering feature known; it not only reveals beauty, speed, power, smoothness and stamina unsurpassed by expensive cars—but it combines these essentials at the very minimum cost.

OAKLAND MOTOR CAR COMPANY, PONTIAC, MICH.

Oakland Six, $1025 to $1295. Pontiac Six, Companion to Oakland Six, $825, Coach or Coupe. All prices at factory. General Motors Time Payment Rates, heretofore the lowest, have been made still lower.



The Coach, $1095

Like the Case on your watch
-Leadclad Wire is plated to last a lifetime!

Every farmer who has had to replace and repair his fence can appreciate the advantage of buying a longer-lived fence.

Leadclad Fence provides permanent protection, prevents costly repairs and keeps your farm looking neat years and years after ordinary galvanized fence has rusted to pieces.

Just as your watch case is made of gold, reinforced with a stronger metal, so Leadclad Fence is pure lead, reinforced for strength with Steel.

The pure lead jacket of Leadclad is not affected by heat, frost or moisture. It is the most effective rust proofing ever discovered for wire fence outlasting zinc or galvanized several times over.

Take your knife and shave a piece of LEADCLAD wire. Note how thick the pure lead jacket is. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

5% CLUB OFFER

Leadclad Fence is sold to you at a single profit, direct-from-the-factory basis. We pay the freight and allow 5% discount on Club Orders.
Sign the coupon and send it in for samples of Leadclad Wire and full information.

ESSEX "6" COACH

300,000 Owners Know Its Time-Proved Quality

More than 300,000 owners have bought Essex for its Super-Six advantages in Performance, Riding Ease and Economy, with pride of ownership in a fine and beautiful car.

And thousands of new buyers who know the facts are turning to Essex for these proved and satisfying qualities, which no other car at its price ever approached.

Remember, Essex is an exclusive and totally different type. No other car can share its advantages. Its smooth distinctive performance is combined with the riding ease of costly cars. Steering is easy. Economy is outstanding in fuel, tires and oil, but most important are the savings of trouble-free operation for thousands of miles at little or no cost for service.

It is the best Essex ever built, and because of its production and the constant development of economical and precision methods of manufacture, it is priced lower than ever before.

Because it SAVES All the GRAIN—

1st Every Year with The 4 Threshermen

And a Fordson—

Threshing rigs go one way 'round one year, and the other the next, don't they?

Then on the average the best you ever get is the middle of the season, first one year, last the next, or always in the middle.

You're first every year with the 4 Threshermen, the Big Cylinder, the Man Behind the Gun, the Steel Winged Beater and the Beating Shakers. They send the last kernel to the wagon box and none to the straw pile.

With your Fordson or other small tractor and a Nichols & Shepard 22 x 36 farm size thresher you're always first—first in the season and first in the quality and quantity of the grain saved.

The Red River Special threshes all grains and seeds.

Each thresher is equipped with Roller Bearings,—Alemite-Zerk Lubrication—and Tilting Feeder. The price is reasonable and the practically all steel construction very strong.

NICHOLS & SHEPARD COMPANY

Important to Employers!

The Workmen's Compensation Act became effective Jan. 1, 1926, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation Schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Little Aaron Is Greatly Puzzled

This Lancaster County Farm Boy Can't See Why Folks Are Shy of Electricity

By Mrs. IDA S. HARRINGTON

AARON BRUBAKER, sturdy five-year-old, eager to be six and at school, wonders why so many folks come to see his mother's kitchen. He doesn't say so, because that isn't a child's way, but the wide serious eyes he turns on visitors show that he is doing "a mort of thinkin'."

What, thinks Aaron, makes everybody "Oh" and "Ah" and "Did you ever?" at the sight of Mother's electric range, electric mixer and electric refrigerator? All these things are matters of course to Aaron, just as much as Father's farm machinery. Interesting, of course, to watch, but just the natural way of getting work done. Why be so excited about it? Aaron has never lived under makeshift conditions. He was born with something better than a "silver spoon in his mouth," and that something was an acceptance of all things electrical as items in a paying farm and home.

Aaron remembers a few times,—as once when Mother was sick—when some nice woman came to help with the housework. It was an interesting experience. Aaron could tell you to the last detail just how this helper did things differently from Mother. But on the whole Aaron and the two older boys (one his brother and the other a boy to whom the Brubakers are giving a home) much prefer to have Mother all to themselves and to see her, with just the touch of a finger, set all her magic helpers to work.

Novel Playthings for Most Boys and Girls

Little Lester of the golden curls hasn't begun to figure out such things yet. He is at the age where the new ability to walk and "get into everything" is his absorbing interest. But already he covets the paddles of the electric mixer as other children covet old-fashioned mixing spoons to play with.

Perhaps it is because she never has to shout directions to these mechanical workers that Aaron's mother has such a pleasant voice. It is a voice that makes little boys willing to "mind," and grown-ups glad to listen. Or perhaps it is because she is so serenely sure that whatever is made in that kitchen will be good. Potatoes mashed in the electric mixer are of a fluffy smoothness that suggests whipped cream. Pastries, doughs, salad dressings and frostings melt in one's mouth. Desserts put together by the mixer and chilled or frozen in the electric refrigerator (or by motor in the freezer) cause a great silence to fall at the dinner table after the first ecstatic "M-m-m!"

That electric refrigerator! Never a shortage of ice, never a variation in temperature, never a pair of muddy boots laboring thru the door when ice is needed!

An Electric Range

And the electric range! There with the goods when you want it, and not using (nor costing) power when you don't. Never overheating your kitchen. Storing up in its insulated oven enough heat to finish a baking, once it is well started.

No wonder that visitors come. No wonder they "Oh" and "Ah," and say (without stopping to think) that "some folks have all the luck." A very little thought would convince them that this particular farm carries its electrical equipment not thru luck but as the result of careful estimating, efficient planning and intelligent cooperation.

"We plan all things together, my husband and I," said Mrs. Levi H. Brubaker, of Locust Lane Farm, Lancaster County, Pa., in answer to a question. "Yes, we electrified the farm first and then the house, because by that time we had proved that electricity pays."

Thus the electrical equipment in the Brubaker home represents a sound business investment, not a fad nor propaganda. It has been intelligently bought and is being intelligently used. Mrs. Brubaker and her husband have worked for their equipment, and now they are making it work for them.

One look at the kitchen is enough to convince one that, whatever her equipment, Mrs. Brubaker would make the most of it. The relative location of refrigerator, work table, range, sink (a glorified sink of porcelain, high enough to do away with even the possibility of a "crick" in the dish-washer's back), and kitchen cabinet show that an efficient brain is on the job as "general manager."

The high stool, conveniently placed, shows that this housewife does not scorn to economize on woman power,—even at the risk of being called "queer." The portable toaster makes unnecessary even the short trip from breakfast table to range. Next to the outside door,—well away from the food-preparation end of the kitchen,—a small washstand with hot and cold running water is handily placed for the men as they come to meals. Electrically driven pumps furnish the house with both hard and soft water.

It is difficult to pry the visitor away from the appetising suggestions of Mrs. Brubaker's kitchen, but she has other household devices too good to miss. In a convenient well-lighted back room stands the electric ironing machine, with a seat for the ironer. An electric hand iron is within easy reach to give the finer touches.

"And I do like this electric washer," says Mrs. Brubaker, leading the way to the spotless cellar. "It does make the clothes so beautifully clean!" The woman who speaks with enthusiasm of washday, with four boys to wash for, proves that she has superb health or unusual help. In Mrs. Brubaker's case it is the electrical helper that saves the day, as does the vacuum cleaner on sweeping days.

The most popular electrical device of them all. Washing machines are changing Monday from the hardest to the easiest day of the week.

A Furnace Man That's on Time

The newest worker in the Brubaker household is the automatically controlled oil burner in the furnace. This "furnace man" gets busy before the family is up, and thruout the day keeps the temperature at the desired point. Just a wee bit noisy in getting under way is this helper. Small Lester holds up a tiny forefinger to call attention to this latest household sound. In a few weeks it will be as familiar as was the scraping of Dad's shovel.

One is tempted to tell of the stores of canned foods and apple butter, admired and even sampled "on the side." But these are only another testimony to Mrs. Brubaker's housewifely skill and do not deal with her electric helpers.

All within arm's length,—air, light, a model sink, a handy cabinet and an electric toaster.

She's a Pioneer

Like little Aaron Mrs. Brubaker wonders why people think her exceptional. It took more than a little persuasion to make her pose for a picture. Only the argument that her presence was needed to make the picture "come alive" conquered her reluctance. Mrs. Brubaker little realizes that she is a pioneer in substituting the

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

The helpful people are not necessarily the learned or gifted, but those who use to the best advantage the ordinary gifts.

Wheat Crop Prospects

THE acreage of winter wheat abandoned this spring is reported as being five and one-half per cent of that sown last fall. The average percentage for the ten-year period is thirteen, hence there is more than the usual proportion left to develop a crop. The condition on May 1 was given as 84 which is a fraction above the ten-year average for that date. On this basis a total yield of 548,908,000 is indicated. This is about 150,000,000 bushels more than the crop of last year, and about 50,000,000 less than that of 1924. The world crop shows prospects of being normal in most countries.

Tractors and Radios

THE study of the statistics related to agriculture is one way of keeping track of the development of that industry. Machinery and equipment operated by gasoline and electricity have been adopted to an unprecedented extent during the last ten years. Recent figures show that farm tractors and radios are among the more recent inventions being widely adopted. There are on the 6,000,000 farms of the country over 500,000 tractors, or about one to twelve farms. Altho a more recent development, the radio is found in nearly 300,000 farm homes.

Watch the Local Taxes

THE very commendable success which the federal government has had in reducing taxes and practicing economy must not lull the public's interest in the general and local demand for these things. Few realize the appalling increase in the amount of bonds which state, city and local governments have been and are selling. During the past twenty-five years the value of state and municipal bonds sold in the United States has increased over tenfold, or from $131,549,290 in 1901 to $1,391,000,000 in 1925. To increase the public's obligations so greatly and so rapidly during prosperous times when wages and prices are high is sure to bring trouble some day. The amount of the debt will not fall when and if wages and prices tumble.

Direct and indirect taxes paid by farmers in 1913 aggregated approximately $624,000,000, or nine per cent of the gross agricultural income. In 1922 this amount had risen to $1,436,000,000, or thirteen per cent of the total agricultural income. The direct taxes on farm property in the United States show an increase of 236 per cent in fifteen years while the agricultural income has increased only about 100 per cent in the same time. The most acute period was in 1920 and 1921 when taxes increased 42 per cent and the agricultural income decreased 39 per cent. Surely it is time that farmers and other real estate owners should become aroused to take some action by studying their own problems instead of waxing wroth at the behest of politicians over less important questions and purely personal matters.

Pennsylvania Poultry

AMONG the many lines of Pennsylvania's agricultural interests poultry is one that has not received as much publicity as its importance deserves. The state is not usually considered a large producer of poultry and eggs, yet statistics show that it is and hence is deserving of greater recognition in this respect. The figures tabulated by the Department of Agriculture show that there are 2160 flocks in the state each containing 500 or more hens. Montgomery County leads with 360 such flocks, followed by Bucks with 270, and York with 267. The total number of hens in the 2160 flocks of the state is 1,655,610.

Important as are these larger flocks the number of chickens in them forms but a fraction of the total number of hens in the state. The small flocks, ranging from a half dozen birds to two or three hundred each bring the total number in the state up to nearly 17,000,000.

What Farmers Want

TO FIND the answer to the oft repeated question, "What do farmers want?" the Sears Roebuck Agricultural Foundation sent out a questionnaire, and received several thousand answers thereto. Tabulation shows the following:

The replies showed that 31.7 per cent thought cooperative marketing was the greatest single need; 14.6 per cent named "the solution of the marketing problem;" 14.6 per cent named "the education of farmers, and the application of business methods to the agricultural industry;" five per cent said it was "the solving of the farm labor problem;" four per cent said it was "the removal of the inequalities between agriculture and industry;" 4.4 per cent said it was the solving of "farm credit." A few scattered opinions gave "taxes" and "lower freight rates."

It would be still more interesting to know whether those who answered arrived at their conclusions by actual observation and personal study, or whether they but reflected the opinions of others who have been recommending these things so diligently the past few years.

Where the Money Goes

ON A SHEET supplementing a bulletin the Pennsylvania Department of Agriculture analyzes the disbursement of the $4,053,696 which it will have at its disposal for the years between June 1, 1925, and May 31, 1927. Just about one-half, $1,999,000 or 49.3 per cent, will be paid out as indemnity for tubercular cattle. The next largest amount, —29.6 per cent or $1,202,646,—is allotted to the promotion and protection of livestock. By this it will be seen that almost eighty per cent of the total money spent by the state for agriculture is applied to the livestock industry. The balance is divided as follows: Development and protection of farm crops, 7.6 per cent; enforcement of pure food laws and fertilizer laws, 7.9 per cent; marketing service, 2.1 per cent; administration, including statistics, 3.5 per cent.

Narcotic Congress

AMONG the several educational meetings scheduled to be held in Philadelphia during the Sesqui-Centennial this summer will be a narcotic congress. Except as they read of the traffic and use of narcotics in the city papers, rural people know very little about the menace which narcotic drugs hold for the human race. Yet, it is not impossible to extend the trade to country districts. In fact, if the purveyors of these drugs should decide to widen their field, the country would afford a fruitful field, since it would be much easier, for a time at least, to carry it on secretly there than it is in the cities. The proposed congress should prove opportune to give information on the subject, and by its publicity re-awaken the public interest in suppressing this destructive and illegitimate trade. In spite of stringent laws and close observation, there is a continual surreptitious traffic in the big cities. However, no one has been found who is brave enough to propose liberalizing the law because it is continually violated!

Washington Letter

THE HAUGEN BILL.—The closing discussions on farm relief legislation in the House centered around the Haugen Corn Belt Committee Price Stabilization bill. The chief points argued against this bill were that it gave subsidies to certain groups of farmers; that it levied equalization fees against farmers who would receive no benefit therefrom; that it created a government board with broad powers to regulate and control the farming business; that it was paternalistic, socialistic and unconstitutional. Especially strong objection was made to the equalization fee.

Its proponents declared that the protective tariff is just as much a subsidy as is the one proposed in the Haugen bill; that it would provide the farmer a means of carrying over his surplus to a lean year, which is the fundamental agricultural problem.

Many congressmen declared that the farmers in their districts did not want the Haugen bill.

BOTH SENATE AND HOUSE BUSY.—Both the Senate and House have been holding night sessions for the purpose of clearing up the rush of bills. Yet there is little prospect of ending the session before June 15th. On the night of May 10, the Senate passed seventy-six bills, one of which was the Capper-Tincher bill extending to cooperatives the right to hold membership on boards of trade other than contract markets, while still retaining the patronage dividends feature. This bill applies to cooperatives handling all agricultural commodities. The standard container bill also passed the Senate, and is on the House calendar.

NOW UP TO THE PRESIDENT.—The Watson-Parker railroad labor bill has passed both the House and Senate. It is believed that President Coolidge will sign this bill, altho he has let it be known that he is not satisfied with it, because no provision is made in it for representation of the public in the settlement of wage differences.

James E. Emery, counsel of the National Association of Manufacturers, undoubtedly voices the sentiment of the public generally when he says: "The Watson-Parker bill throws away the climax of thirty years of effort to give those who pay the freight bills effective control of unfair wage agreements and awards. It provides no legal protection against arbitrary interruption of train service. It was shaped and indorsed only by the parties at interest. It was approved by no business organization. It was condemned by all forms of shippers, farmers, business men, traffic students, many carriers and a majority of the railroad employes unrepresented in its formulation." It is regarded as a distinct victory for the railroad workers' organizations.

IMPORTED MILK.—Representatives of dairy organizations have appeared at hearings in favor of Senate bill 4126, introduced by Senator Lenroot, of Wisconsin, requiring milk producers of neighboring countries to conform to the same standards as are required in the United States, when producing milk for consumption in American cities.—E. E. Reynolds.

Harrisburg Letter

VACANT FARM INQUIRY.—State agricultural authorities have determined to find out just what the exact situation in Pennsylvania is in regard to idle farms, there having been so many conflicting reports about tracts long under cultivation being abandoned and others being given up to hay production and some to cattle. A special inquiry will be sent to each of the hundreds of districts and reports made to the state as to how many farms are idle, how many are partially idle, how many are being devoted to raising of hay and whether many have been abandoned entirely. There have been some interesting stories coming here of farms in mountain counties being thrown together and used for grazing and the idea is to get the facts.

RURAL ELECTRIC PROBE.—It is probable that some steps will be taken by the Public Service Commission to get up for review rates of companies filing schedules for rural electric service, assertion having been made by Governor Pinchot that certain of the rates proposed are unfair in that the "distance charges" are laid against the consumer. The whole question of the right of the commission to establish rural electric regulation is now up to the courts. In the meantime there is objection to the rates offered as being too heavy to be attractive and not fair when contrasted with town rates.

AFTER MORE CROSSINGS.—Complaints have been lodged by the State Highway Department against several grade crossings on main highways in southern counties specializing in agriculture and fruit raising and it is part of a campaign to get relief where dangerous conditions exist. The complaints are the result of a study of grade crossings conducted by officers of the roads department and of the Public Service Commission. Recent orders made by the commission call for abolition of crossings which will run into hundreds of thousands of dollars.

NEW JAPANESE BEETLE RULES.—The new quarantine regulations for eastern Pennsylvania become effective on May 15th. They are much the same as last year with special attention given to inspection at farms and nurseries. The patrol will cover roads in motor vehicles and notice has been given the fine of $100 will be asked for violations.

WEED DRIVE TO START.—Plans for an extensive drive to arouse farmers and land owners to the importance of cutting down weeds before they flower are being made at the Capitol. The data compiled in the recent weed report is to be brought to the attention of farmers together with the estimate of loss of $2 for each arable acre. There is much interest in just how this may be worked out during the summer. Cooperation has been promised by many people.

WARN ON GREEN HAY.—Fire protection officials at the State Capitol are preparing warnings for hay raisers of the dangers of fire as shown in the extensive investigations conducted in southeastern Pennsylvania counties. Use of thermometers in hay mows just as the instrument is used in milk handling is being urged.—Hamilton, Harrisburg.

New Jersey Letter

CENTRALIZATION COMMITTEE MEETS.—The next step toward centralization of farm organizations in New Jersey took place last week when representatives of the organizations met at Trenton to draw up a constitution and effect tentative plans. The new body representing all the organizations of farm activities in the state will be known as the New Jersey Council of Agricultural Organizations. The groups fostering the movement and leading in the organization work are the New Jersey Federation of County Boards of Agriculture, State Horticultural Society, State Grange, State Poultry Association, State Beekeepers Association, and the Holstein-Friesian Cooperative Association of New Jersey. Completion of the plans will probably not be decided until next winter, at which time the various groups will have opportunity to pass on the plans at their annual meetings.

READ CONTRACT BEFORE SIGNING.—Complaint has been received by the farm bureau that electric light and telephone companies in New Jersey have been taking unfair advantage of the farmer's willingness to allow poles to be placed on his property. The average individual believes that the public utility companies retain ownership of the poles, whereas the contract actually provides, it appears, for ownership of the poles to be vested in the subscriber. When the poles need replacing the burden of that cost appears to fall on the subscriber, and numerous cases of complaint are being registered with the farm bureau.

ASPARAGUS PRICES GOOD.—Good returns on asparagus in southern New Jersey have given the industry a new lease of life this year. The season opened with the price at $7.50 per dozen bunches or better, dropping off gradually as the shipping season opened up. Growers have been expecting that this year would determine the status of the industry which has gradually been waning for the last eight or ten years. Despite the general pessimism considering the profitable growing of asparagus in southern New Jersey, the prominent growers do not appear to be skeptical.—B.

New York Letter

WEATHER AND CROPS.—The very late, cold spring made it impossible in this state to make the usual progress with farm work. On May 1 but thirty-five per cent of the spring plowing had been done, compared with sixty-five per cent of last year, and with an average of 58 per cent in the past ten years. Pastures will be late. Hay feeding began earlier than usual last fall, so it seems likely that the hay carry-over will be less than usual. The reported average price of hay at the barn on April 15 was $14.10, as compared to $12.40 of a year ago. The average condition of meadows is eleven per cent below the condition of a year ago.

POTATO SITUATION. — Potato growers are keenly interested in this year's outlook. News has been received that the early potato states, stimulated by the unusual prices, have planted eleven per cent more potatoes than last year. There is a general desire to keep the acreage down in the state, or from undue increase due to this year's prices. The federal Department of Agriculture warns that "Conditions are so abnormal this spring that no farmer outside the very early states can afford to increase his acreage without taking into consideration the acreage of others."

COMMITTEE CANNOT AGREE.—A recent news dispatch brings disappointment to those who had hoped for harmonious action from the new committee of eleven, to form a new dairy marketing organization which should stabilize and develop the dairy industry in this state. At the last meeting of the committee little progress in this direction was made, as representatives of certain dealers' organized producers refused to do more than to recommend a "milk conference board" to meet monthly and set prices. This is an old idea, tested and found wanting as of practical service to producers. The dairying public had hoped for greater breadth of view and insight into the real needs of the industry than this. —M. G. F.

GATHER all the low-price marks on tires you can get in front of you. Sum up all the claims of service. You can outmatch them at the nearest Goodrich dealer. With Goodrich tires and prices, he will prove that he has the best tires at the lowest first cost.

Every Goodrich Tire is a Cord. Our vast output provides you a choice sure to deliver the greatest mile-for-mile, dollar-for-dollar value in a tire.

Goodrich provides cords that are strong; they include every betterment known to tire making—carcass strength; tough, slow wearing tread; and extra rubber insulation.

When you buy Goodrich tires you buy mileage, and you buy it at the lowest price. The farm dollar goes further in them than anywhere else, and you measure its distance in mileage.

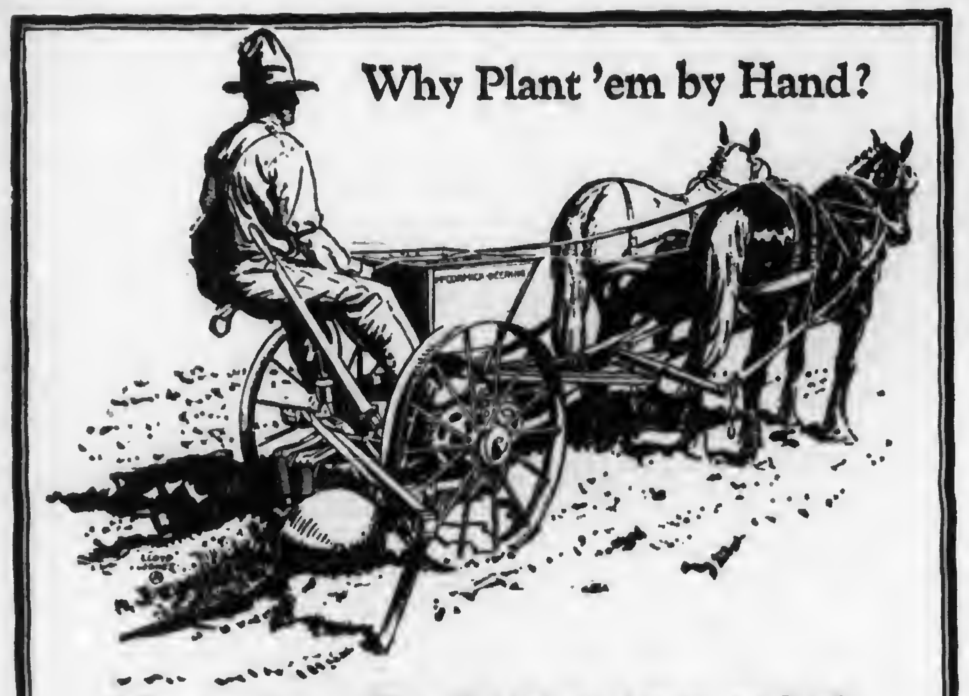
Akron, Ohio

Goodrich
"Best in the Long Run"



Why Plant 'em by Hand?

You Can Do It Better with the McCormick-Deering Planter!

Government Bulletin No. 1188 says: "It is significant that the yield of potatoes is less, and the cost of production greater on farms where planting is done by hand than on those planted with machines."

The McCormick-Deering potato planter handles cut seed and small whole seed with an accuracy as nearly one hundred per cent as it is possible to obtain with a mechanical planter. It possesses new and distinctively McCormick-Deering features, and employs the latest and approved principles of potato planter construction.

McCormick-Deering Potato Digger

The McCormick-Deering digger is made in a 6-ft. size for two horses and a 7-ft. size for four horses. The rear shaker thoroughly separates the potatoes from the dirt, and the vine turners throw vines and weeds to the side, leaving the potatoes in a clean row behind the digger.

Your local dealer can show you these McCormick-Deering planters and diggers. See him without delay.

Hitch Your Tractor to the FARQUHAR "Junior Thresher"
And Thresh 50 Bushels per hour

Individual or group threshing is profitable because it permits earlier threshing, requires less labor, and you use your own tractor for power.

The Farquhar "Junior" has a capacity of about 50 bushels per hour of average wheat. It does a nice clean job of threshing any kind or condition of grain. It saves the grain and cleans it ready for market. The Fordson has ample power to drive the Farquhar "Junior."

Plan to make more money with your tractor—Write today for our Thresher Bulletins.

We also build Sawmills, Hay Balers and Cider Presses to be operated by tractor.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

IN SPITE of the steadily cool weather this spring our asparagus has grown surprisingly well. In fact, it was so vigorous and early and the price was so good that we could not resist the temptation to cut it daily for one week. However, we stopped at the end of that time and are letting it grow now so that it may continue its work of crown development for future production. We cut it in spite of all the recommendations not to do so for at least two years after it is set. We propose giving it an application of 1000 pounds per acre of a 4-8-6 fertilizer about the first of June.

✦ ✦ ✦

THE peach trees set three years ago are full of blossoms, and some varieties of the two-year-olds also have a good many. Some of the latter trees are almost as large as the three-year-olds, probably due to the plowing down of a heavy growth of soy beans just before they were planted. We have been careful not to fertilize the trees too heavily and force a too rapid growth. I have noticed that peach trees, like children, are subject to two extreme methods in handling,—they are either pampered and over stimulated, or they are starved and neglected. The results are bad in either case.

✦ ✦ ✦

OUR plowing is about all done and the ground has been rolled so as to allow it to "knit" before planting. What it needs now is a settling rain, something we have not had for over two weeks. Many farmers in our neighborhood find the plowing of sod difficult because of the lack of moisture. However, I find that soil plowed rather early and kept harrowed is sufficiently moist for plant growth when the temperature is high enough. Our garden crops would be the better for irrigating now but we are too short-handed to get the system in shape for operating.

✦ ✦ ✦

I WAS gratified to hear a young city woman who had been out in the country over Sunday make this remark: "How beautiful the country is now. I do not see how anyone who sees and notes the beauty and blossoms of springtime can say there is no God. Why, Nature proclaims from bush and tree every day that there is." Unfortunately, too few people seem to take time to appreciate these things. They simply take them for granted and consider them as only commonplace incidentals. Speed is the one big thing in which most people seem to be interested just now.

✦ ✦ ✦

I SEE by a farm paper exchange that a city man advertises his desire to exchange his closed car in part payment for a Kansas wheat farm. He has little money but he will pay the balance in three yearly payments. The inference is that he will make the money on the farm. I do not know what priced car he has nor what he thinks a good farm would cost, but his logic is typical of the ideas held by a good many city people concerning farming. It may be that he has found it expensive to keep up his car; but he would find that there are several expenses connected with keeping up and running a farm also. I have heard some farmers talk as if they were about ready to exchange their farms for a car, or almost anything else.

✦ ✦ ✦

THE spread of the cities in the East and the purchase of small homes and small tracts of land for homes several miles from the cities is boosting the price of land so fast that it is impossible to say how long the farmers in this section can afford to hold their land for general farming. Of course, taxes are mounting as fast as the valuations, and since farm incomes are not correspondingly increased it becomes in time simply impossible to continue no matter how willing the farmer may be to go on.

Soy Beans in Dauphin

BECAUSE of the poor prospects for the hay crop, Dauphin County farmers are planting soy beans for roughage this year. At least 700 acres will be seeded by about 150 farmers. Many who are finding that a considerable amount of lime is needed for a good stand of alfalfa are turning to soy beans as a substitute.—A. L. B.

THE CHEERFUL PLOWMAN

∴ *The New Milker* ∴

I USED to be old fashioned, old fashioned as could be, conservative and careful beyond all sane degree. A new thing, Land of Goshen, I shied away from that just like a timid robin would shy from any cat! I took no random chances, I ventured not at all! I feared the auction hammer, the sheriff and the "wall"! My neighbors purchased autos, but I said, "No, no, no! Not while old Tom and Jerry still have the strength to go!" When this thing was suggested, or that thing came along, I time again repeated that ancient caution-song! Of course, I later purchased the things that I condemned and then had conscience pleated and had my ego hemmed, but always did I loiter the full allotted span before I took for granted a kickshaw or a plan!

And so when patent milkers came in with skip and run and gained their place and prestige, their homestead in the sun, my neighbors cried, "You betchee!" and fired two milking hands, and swore that added sunshine had settled on their lands, but I said, "No sir, no sir, no, no sir, no siree! No coggied-up contraption shall milk a cow for me!" So I hung off for ages and milked in olden way, and wasted time, I'm certain, some two fat hours per day! And then I bought a milker, and say, I'm satisfied, I put a two-inch pucker in conscience, will and pride, but by the bones of Harry, that milker is a wow! It is a splendid asset to farmer and to cow!—J. Edw. Tufft.

grass is enough for *twenty* pounds *of milk*

Penn State Bulletin No. 195 says that a 1200 pound cow will eat about 80 pounds of grass a day. She can't hold any more. This is enough feed to keep her going and produce 20 pounds of milk. If she does better than this, as she must to make her owner a profit, she makes the milk out of her body. A good cow cannot make milk to her capacity and keep in flesh on grass alone, for it is over three quarters water.

Coming after the dry feeds of winter and the long days in the barn the grass is fresh and welcome. Cows fill up on it. They are stimulated to new life. Take full advantage of the tonic quality of the grass and give the cows the grain they need as soon as they will take it to build them up for late summer and fall production.

AMCO FEED MIXING SERVICE has a feed especially designed for early pasture conditions, Amco 16% Dairy. Sixteen percent protein is ample until July 10 because early pasture grass is high in protein, but low in energy. After that use Amco 20% Dairy.

The formula for Amco 16% Dairy was worked out by the College Feed Conference Board (the feeding specialists of the eastern colleges of agriculture); they have put into it the ingredients best suited to supplement the nutrients in the early pasture grass.

If you have home grown feed you can make a mixture comparable to Amco 16% Dairy with 300 pounds of Amco 20% and 200 pounds of home grown feeds (corn, oats, or barley).

To get all the milk your cows are capable of producing the whole year through give them about one pound of Amco 16% Dairy to 6 or 8 pounds of milk while on early pasture. A cow giving 35 pounds of milk a day needs 6 pounds of Amco 16% Dairy, while a cow giving 50 pounds of milk needs 8 pounds of Amco 16% Dairy.

AMCO FEED MIXING SERVICE, by direct contract with community groups, makes Amco 16% Dairy and other Amco feeds available to the smallest feeder in the smallest community. The savings made by interested purchasing of great tonnage, volume mill operation, and low order-getting costs are reflected in the low prices the feeder pays.

KELLYS' *Certified*
True-to-Name Fruit Trees

I made money on my Maine Farm

STARTED farming in 1915 with a debt of $1500 on a $2000 farm. My dairy herd now numbers 15 pure-breds, the house has water, lights and furnace and fields are twice as productive. Raised a hundred-barrel an acre crop of potatoes. Just turned down an offer of $5000 for the farm. Profits paid off the debt, made the improvements and I am laying by something each year.

Last year's returns were $4238.83. Any farmer can do as well in Maine if he is willing to work.

This is one man's story. Read what 100 other farmers say in

Judging Brooder Temperature Soon Becomes a Simple Matter for the Poultryman

I would like to have some advice relative to baby chicks. I have Plymouth Rocks. I use a coal brooder and a nice chick house. My fire was never out but low at times. At what degree should the temperature be kept? I fed the chicks five times a day and only what they would eat at one feeding. Several of my chicks died of diarrhea (not white) but light brown color, then some simply got light in weight and would not eat, then died. Only a few have had long wing feathers.—E. M. K., Schuylkill Co., Pa.

When judging brooder temperatures by the thermometer it is customary to hang the thermometer at the outside edge of the hover with the bulb about the height of a chick's back from the floor litter. The first and second day it should be 100 degrees. The remainder of the first week it can be about 98 degrees and the second week 95 degrees. The third to the sixth week 85 degrees is all right and that can be continued until the chicks are feathered, the weather is warm and no artificial heat needed.

The above figures and the use of the thermometer are largely for the beginner. With a little experience you can look at the chicks, touch the metal hover and shake down the ashes and know whether the heat is right or not. The most practical way is to keep a good fire in the stove and be sure it does not become clogged with ashes.

If the chicks need more heat they will draw near the stove and huddle. If the stove is too hot they will move out. It is about ideal when the chicks seem to rest in comfort around the edge of the hover or sleep in a circle or semi-circle a couple inches outside of it. This means that there is a reserve supply of heat and the stove is going all right to protect them until morning.

Diarrhea in chicks may be caused by overfeeding, overheating, chilling or infection with white diarrhea. Bacillary white diarrhea is inherited by the chick from an egg laid by an infected hen. Chicks may show a white discharge or may die without showing outward signs of the disease. The liver of such chicks will be yellow instead of a healthy red. Part of the yolk is found to be unabsorbed and the abdomen swollen and puffy.

Hatch from Blood-Tested Flocks

Feed may be in the chick's crop but the chick will be thin and show all the signs of sickness and stunted growth. Hatching from blood tested flocks is the best means of preventing such losses.

Common bowel trouble is best prevented by careful feeding and brooding methods. Allow the chicks to run out on the ground in the sunshine as soon as possible or feed cod liver oil if the weather is bad for any length of time. Avoid overfeeding and keep the water and milk fountains as clean as possible.

The use of the balanced commercial chick starters saves a lot of chicks from dying from simple digestive disorders.—R. G. Kirby.

Garden and Truck Crops

W. T. TAPLEY, Staff Contributor and Adviser

Worms in Onions

What can I do to keep the worms out of my onions?—R. L. T., Lancaster County, Pa.

The maggots (small white worms) found in vegetable crops are very hard to kill off. There are maggots found in the edible part of turnips and radish, also in the roots of cabbage and cauliflower plants. If plentiful, the crop will be totally ruined.

The onion maggot does not belong to the same species as the cabbage maggot but the life history of the insect is very nearly the same. However, since the growing methods and habits of the onion crop are quite different from cabbage, a different control is used.

The Pennsylvania State College worked out a control for onion maggot and published it in 1922 as Bulletin 171. It is based on the life habits of the adult, which is a fly. By placing a poisonous liquid in cans these flies can be killed. The formula for the maggot bait uses these materials: Sodium arsenite, one-fifth ounce; molasses, one pint; water, one gallon; chopped onion, one-quarter pound. Dissolve the sodium arsenite and molasses separately in boiling water and use as a stock solution.

It is important to have the sodium arsenite thoroly dissolved before adding to the sweetened mixture for the molasses tends to prevent its going into solution. The chopped onion should be added last and the liquid bait allowed to stand several hours before using.

This liquid must be distributed uniformly over the field. Tin cans make satisfactory containers; the protection of one acre requires twenty-four cans when placed fifteen feet apart in every tenth row thruout the patch. One gallon of the liquid will fill twenty-four cans to a depth of about two inches at each application. A less amount in a container will necessitate repeating the operation more often than once each week, which under ordinary circumstances or conditions should be sufficient.

Worth the Expense

The entire cost of labor and materials for placing and refilling the tins once each week from May until August should be about $12.00 for each acre treated.

The proper timing of bait applications is an important factor in securing effective control. Cans should be placed in the field soon after seeding and carefully refilled after heavy rains and during long periods of hot dry weather. May and July are the most important months in maggot control for Pennsylvania on account of the first and second brood of flies depositing their eggs during these periods.

It is not an easy matter to control onion maggot but it is not as laborsome as it sounds after you once get started. An increase of a few bushels of good bulbs per acre should pay the costs.—W. T. Tapley.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

Just when Pelletier believed he was dying Jim Blake appeared with a story of an Eskimo squaw left at an igloo up the coast. Pelletier discovers the story to be false and starts a search for the deserted white woman which ended abruptly when he found a dead Eskimo woman and a living baby—Little Mystery—in a nearby igloo. Several days after MacVeigh's return to the cabin Eskimos—the dangerous Kogmollocks—came for the child and to save her the men fled. Next day they met Scottie Deane, father of Little Mystery, who, after he explained everything to the following Kogmollocks, died and was buried by these Eskimos who were devoted to him.

(Continued from last week)

IN A FEW moments the crude work was done, and like a thin black shadow the natives filed back to their camp. Only one remained, sitting cross-legged at the head of the grave, his long norwhal spear at his back. It was O-gluck-gluck, the Eskimo chief, guarding the dead man from the devils who come to steal body and soul during the first few hours of burial.

Billy went deeper into the forest until he found a thin, straight sapling, which he cut down with half a dozen strokes of his belt-ax. From the sapling he stripped the bark, and then he chopped off a third of its length and nailed it crosswise to what remained. After that he sharpened the bottom end, and returned to the grave, carrying the cross over his shoulder.

Stripped to whiteness, it gleamed in the firelight. The Eskimo watcher stared at it for a moment, his dull eyes burning darker in the night, for he knew that after this two gods, and not one, were to guard the grave. Billy drove the cross deep, and as the blows of his ax fell upon it the Eskimo slunk back until he was swallowed in the gloom. When MacVeigh was done he pulled off his cap. But it was not to pray.

"I'm sorry old man," he said to what was under the cross. "God knows I'm sorry. I wish you was alive. I wish you was going back to her—with the kid—instid o' me. But I'll keep that promise. I swear it. I'll do—what's right—by her."

From the forest he looked back. The Eskimo chief had returned to his somber watch. The cross gleamed a ghostly white against the thick blackness of the barren. He turned his face away for the last time, and there filled him the oppression of a leaden hand, a thing that was both dread and fear.

Scottie Deane was dead—dead and in his grave, and yet he walked with him now, at his side. He turned back to the cabin, and entered softly. Pelletier was asleep. Little Isobel was breathing the sweet forgetfulness of childhood. He stooped and kissed her silken curls, and for a long time he stood with one of those soft curls between his fingers. In a few years more, he thought, it would be the darker gold and brown of the woman's hair—of the woman he loved. Slowly a great peace entered into him.

After all, there was more than hope ahead for him. She—the older Isobel—knew that he loved her as no other man in the world could love her. He had given proof of that. And now he was going to her.

After his return from the scene of burial Billy undressed, put out the light, and went to bed. He fell asleep quickly, and his slumber was filled with many dreams. He awoke twice, and each time he sat up, filled with the shuddering dread that had come to him at the grave-side.

A third time he awakened, and he struck a match to look at his watch. It was four o'clock. He was still exhausted. His limbs ached from the tremendous strain of the fifty-mile race across the barren, but he could no longer sleep. Something—he did not attempt to ask himself what it was—was urging him to action.

He got up and dressed.

WHEN Pelletier awoke, two hours later, MacVeigh's pack and sledge were ready for the trip south. While they ate breakfast the two men finished their plans. When the hour of parting came Billy left his comrade alone with little Isobel and went out to hitch up the dogs. When he returned there was a fresh redness in Pelletier's eyes, and he puffed out thick clouds of smoke from his pipe to hide his face. MacVeigh thought of that parting often in the days that followed. Pelletier stood last in the door, and in his face was a look which MacVeigh wished that he had not seen. In his own heart was the dread and the fear, the thing which he could not name.

For hours he could not shake off the gloom that oppressed him. He strode at the head of old Kazan, the leader, striking a course due south by compass. When he fell back for the third time to look at little Isobel he found the child buried deep in her blankets, sound asleep. She did not awaken until he stopped to make tea at noon. It was four o'clock when he halted again to make camp in the shelter of a clump of tall spruce. Isobel had slept most of the day. She was wide-awake now, laughing at him as he dug her out of her nest.

"Give me a kiss!" he demanded.

Isobel complied, putting her two little hands to his face.

"You're a—a little peach," he cried. "There ain't been a whimper out of you all day. And now we're going to have a fire—a big fire."

HE SET about his work, whistling for the first time since morning. He set up his silk service tent, cut spruce and balsam boughs until he had them a foot deep inside, and then dragged in wood for half an hour. By that time it was dark, and the big fire was softening the snow for thirty feet around. He had taken off Isobel's thick swaddling coat, and the child's pretty face shone pink in the fire-glow.

The light danced red and gold in her tangled curls as they ate supper on the same blanket. When they had finished he produced a small pocket-comb and drew Isobel close up to him. One by one he smoothed the tangles out of her curls, his heart beating joyously as the silken touch of them ran thru his fingers.

He threw fresh fuel on the fire, and then he found that the warmth had softened the snow until it clung to his feet. The discovery gave him an inspiration. A warmth that was not of the fire leaped into his face, and he gathered up the softened snow, raking into piles with a snowshoe, and before Isobel's astonished and delighted eyes there grew into shape a snow-man almost as big as himself.

He gave it arms and a head, and eyes of charred wood; and when it was done he placed his own cap on the crown of it, and his pipe into its mouth. Little Isobel screamed with delight, and together, hand in hand, they danced round and round it, just as he and the other girls and boys had danced years and years ago. And when they stopped there were tears of laughter and joy in the child's eyes—and a filmy mist of another sort in Billy's.

It was the snow-man that brought back to him years and years of lost hopes. They flooded in upon him until it seemed as tho the old life was the life of yesterday, and waiting for him now just beyond the edge of the black forest. Long after Isobel was asleep in the tent he sat and looked at the snow-man, and more and more his heart sang with joy, until it seemed as tho he must rise and cry out in the eagerness and hope that filled him.

In the snow-man, slowly melting before the fire, there was a heart and a soul and voice. It was calling to him—urging him as nothing in the world had ever urged him before. He would go back to the old home down in God's country, to the old playmates, who were men and women now. They would welcome him—and they would welcome the woman. For he would take her. For the first time he made himself believe that she would go. And there, hand and hand, they would follow his boyhood footprints over the meadows and thru the hills, and he would gather flowers for her in place of the mother that was gone, and he would tell her all the old stories of the days that were passed.

It was the snow-man!

Until late that night Billy sat beside his camp-fire with the snow-man. Strange and new thoughts had come to him—among them the wonder that he had never built a snow-man before. When he went to bed he dreamed of the snow-man and of little Isobel. The little girl's laughter and happiness, when she awoke the following morning and saw the curious form the melting snow-man had taken in the heat of the fire, filled him again with those boyish visions of happiness that he had seen just ahead of him.

At other times he would have told himself that he was no longer reasonable. After they had breakfasted and started on the day's journey he laughed and talked with baby Isobel, and a dozen times in the forenoon he picked her up in his arms and carried her behind the dogs.

"We're going home," he kept telling her over and over again. "We're going home—down to mama—mama—mama!"

He emphasized that, and each time Isobel's pretty mouth formed the word "mama" after him his heart leaped exultantly. By the end of that day it had become the sweetest word in the world to him. He tried "mother," but his little comrade looked at him blankly, and he did not like it himself. "Mama, mama, mama," he said a hundred times that night beside their camp-fire, and before he tucked her away in her warm blankets he said something to her about "Now I lay me down to sleep." Isobel was too tired and sleepy to comprehend much of that.

By the end of the next day little Isobel could say almost the whole of the prayer that his own mother had taught him, years and years and years ago—so far back that his vision of her was not that of a woman, but of an elusive and wonderful angel; and the fourth day, at noon, she lisped the whole of it without a word of assistance from him.

ON THE morning of the fifth day Billy struck the Gray Beaver and Isobel grew serious at the change in him. He no longer amused her, but urged the dogs along, never for an instant relaxing his vigilant quest for a sign of smoke, a trail, or a blazed tree. At his heart there began to burn a suspense that was almost suffocating. In these last hours before he was to see Isobel there came the inevitable reaction within him. Gloom oppressed him where, a little time before, joyous anticipation had given him hope. The one terrible thought drove out all others now—he was bringing her news of death, her husband's death. And to Isobel he knew that Deane had meant all that the world held of joy or hope—Deane and the baby.

It was like a shock, when he came suddenly upon the cabin in the edge of a small clearing. For a moment he hesitated. Then he took Isobel in his arms and went to the door. It was slightly ajar, and after knocking upon it with his fist, he thrust it open and entered.

There was no one in the room in which he found himself, but there was a stove and a fire. At the end of the room was a second door, and it opened slowly. In another moment Isobel stood there. He had never seen her as he saw her now, with the light from a window falling upon her. She was dressed in a loose gown, and her long hair fell in disheveled profusion over her shoulders and bosom.

MacVeigh would have cried out her name—he had told himself a hundred times what he would first say to her; but what he saw in her face startled him, and held him silent while their eyes met. Her cheeks were flushed. Her lips burned an unnatural red. Her eyes were glowing with strange fires. She looked at him first, and her hands clutched at her bosom, crumpling the masses of her lustrous hair. Not until she had looked into his eyes did she recognize what he carried in his arms. When he held the child out to her she sprang forward with the strangest cry he had ever heard.

"My baby!" she almost shrieked. "My baby! My baby!"

SHE staggered back and sank into a chair near a table with little Isobel clasped to her. For a time Billy heard only those words in her dry, sobbing voice as she crushed her burning face down against her child's. He knew that she was sick; that it was fever that had sent the hot flush into her cheeks. He gulped hard and went near to her. Trembling, he put out a hand and touched her. She looked up. A bit of that old, glorious light leaped into her eyes, the light which he had seen when, in gratitude, she had given him her lips to kiss.

"You?" she whispered. "You—brought her—"

She caught his hand, and the soft smother of her loose hair fell over it.

"Yes," he said.

There was a demand in her face, her eyes, her parted lips. He went on, her hand clasping his tighter, until he could feel the swift beating of her heart. He had never thought that he could tell the story in as few words as he told it now, with more and more of the glorious light creeping into Isobel's eyes. She stopped breathing when he told her of the fight in the cabin and the death of the man who had stolen little Isobel. A hundred words more brought him to the edge of the forest.

He stopped there. But she still questioned him in silence. She drew him down nearer until he could feel her breath. There was something terrible in the demand of her eyes. He tried to find words to say, but something rose up in his throat and choked him. She saw his effort.

"Go on," she said softly.

"And then I brought her to you," he said.

"You met him?"

Her question was so sudden that it startled him, and in an instant he had betrayed himself.

Little Isobel slipped to the floor, and Isobel stood up. She came near to him, as she came that marvelous night on the edge of the barren. There was the same prayer in her eyes as she put her two hands up to him and looked straight into his face.

He thought it would be easier. But it was terrible. She did not move. No sound came from her tight-drawn lips as he told her of the meeting with Deane and of her husband's illness. She guessed what was coming before he had spoken it. At his words, telling of death, she drew away from him slowly. She did not cry out. Her only evidence that she had heard and understood was the low moan that fell from her lips. She covered her face with her hands and stood for a moment an arm's length away, and in that moment all the force of his great love for her swept upon MacVeigh in an overwhelming flood.

He opened his arms, longing to gather her into them and comfort her as he would have comforted a little child. In that love he would willingly have dropped dead at her feet if he could have given back to her the man she had lost. She raised her head in time to see his outstretched arms; she saw the love and the pleading in his face, and into her own eyes there leaped the fire of a tigress.

"You—you—" she cried, backing from him. "It was you who killed him! He had done no wrong—save to protect me and avenge me from the insult of a brute! He had done no wrong. But the law—your law—set you after him, and you hunted him like a beast; you drove him from our home, from me—and the baby. You hunted him until he died up there—alone. You—you killed him!"

WITH a sudden cry she turned and caught up little Isobel and ran toward the other door. And as she disappeared into the room from which she had first appeared Billy heard her moaning those terrible words:

"You—you—you—"

Like a man who had been struck a blow, he swayed back to the outer door. Near his dogs and sledge he met Pierre Croisset and his half-French wife, coming in from their trap-line. He scarcely knew what explanation he gave the half-breed who helped him to put up his tent. But when the latter left to follow his wife into the cabin he said:

"She ees seek, ver' seek. An' she grow more seek each day until—Mon Dieu!—my wife, she ees scare!"

(To be continued next week)

RADIO DEPARTMENT

Lighting Plant Battery

In reading the radio news of Pennsylvania Farmer, I notice that you say a radio can be used by the battery current of a lighting plant. I have tried it but with little results. That is the way I thought it would work. I have sixteen 2-V. batteries. I took three of them and couldn't get results and every time the lights were turned on in another room it affected the set. The plant is just one year old. I would appreciate a little information on connecting a four-tube set, so I could use it on the plant.—R. T. H., Monroe County, Pa.

If turning on the lights in another room while you are using the batteries for your radio causes the radio to weaken you either have very small batteries for the lighting system you are using, or else the batteries are very nearly run down.

A great many suburban and country radio fans use their lighting systems for radio purposes with entire success. Another thing—be sure to use heavy wire in running from the batteries to your set.

Better use the hydrometer and test out all the batteries in your plant, adding distilled water where needed and getting them all up to full charge. The wires from the radio filament binding posts down to the batteries should be no lighter than No. 14, well insulated and provided with strong battery clips screwed or soldered to the ends.

Get the Right Polarity

You must be sure to get the right polarity in making the connections and if your set uses 201-A type tubes (six-volt tubes) attach the clips so as to bridge three cells. Do not, of course, disturb the ordinary connections of the plant. After those three cells have been in use for a time, move the clips to take in three different cells, so as to equalize the drain as well as you can. The comparative state of charge of the batteries can easily be found with the hydrometer.

There can be no difference whatsoever between the results obtained by your radio set when run on the home plant batteries and those when using a separate six-volt storage battery. Be sure to get polarity right—if it is wrong, volume will be poor. —B. F.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

River Bottom Land

How much lime should I use on land for corn? The land has not been worked in three years and it is in Essex County, N. J., in the low ground near the river. The land is dark and I was told that it was fire clay but it grows weeds and wild clover. Can you tell me what kind of soil this is and what kind of fertilizer I should use and how much per acre? I have no stable manure. Will this soil grow sorghum cane? If so, what kind will it grow best to feed poultry as I am planning to raise a few hundred chickens?—R. B., Essex County, N. J.

Your land is probably a very fine, sandy loam with a very considerable proportion of silt, land that you expect to find in river bottoms.

A good application of either burned and slaked lime or ground oyster shells should be made. Located as you are, you should be able to obtain a good grade of ground oyster shell lime from Jersey City, where it is being produced. Such raw ground oyster shells may be applied at the rate of three tons per acre. If burned and slaked lime is used, the application should be equivalent to about 3000 pounds per acre of burned lime.

Since you have no supply of manure it would be desirable, further, to use some commercial fertilizers. A good potato fertilizer, applied at the rate of 500 to 600 pounds per acre, may be recommended.—J. G. Lipman.

A Permanent Pasture

I have a field, extremely low, black loamy soil which has not been in tillage for several years and which I want to convert into permanent pasture. Kindly let me know whether you think such soil would be suitable for Kentucky blue grass, and if so, please let me know how many pounds should be sown to the acre and how late in the year it can be sown. The land is very wet and summer would be the best time for plowing and would work in better with my farm work. Also please let me know how many years it should be allowed to stand before re-sowing. If you do not think blue grass suitable, please suggest some other.—G. A. B., Carroll County, Md.

The land which you describe is undoubtedly well adapted to permanent pasture. It is probably too low and wet for cultivated crops but sufficiently well drained to permit of plowing and seeding to grass when weather conditions are favorable.

No other pasture grass surpasses Kentucky blue grass where it thrives. It makes a close sod, tends to prevent the growth of weeds, withstands trampling, and contains a high percentage of protein. However, in making a permanent pasture, it is advisable to have a mixture of grasses. They occupy all the surface more quickly and surely than a single variety and make a better pasture. Finally those best suited to the soil conditions will crowd out others.

Two Suggested Mixtures

The following mixture, for an acre of land, would, I think, meet your conditions: Kentucky blue grass, 10 pounds; timothy, 6 pounds; red top, 6 pounds; meadow fescue, 2 pounds; alsike clover, 2 pounds.

A mixture which has been suggested for rather wet land is the following: red top, 12 pounds; Kentucky blue grass, 8 pounds; timothy, 4 pounds; alsike clover, 4 pounds.

Since you were unable to make an early spring seeding, it would seem best to prepare the land during the summer and seed about the middle of August. If you should attempt to seed during the summer, the hot dry weather might prevent you from getting a stand.

It would be well to use about a ton of pulverized limestone per acre, spread broadcast and harrowed in before seeding. It would also aid the grass in getting a good start if you would apply 75 to 100 pounds of nitrate of soda and 200 pounds of acid phosphate per acre.

If you apply lime once in four or five years and top dress with nitrate of soda or sulphate of ammonia every spring, such a pasture should last for many years.—A. W. Blair.

A bride walked briskly into a grocery store, and asked for a couple of good eggplants. As the grocer was wrapping them up, she asked, "How deep should these be planted to get the best results?"

"Planted?" said the astonished grocer. "You're not going to plant them, are you?"

"Yes," replied the bride. "My husband won't eat any but strictly fresh eggs, and the stores are so unreliable I have decided to raise my own."—National Republican.

News and Notes

A FEW days ago a tomato grower down in Alabama heard one evening a radio weather report predicting a frost for his section that night. Fearing his newly-set tomato plants would be killed he went out and turned on the water in his overhead irrigation system which covered his entire tomato field. He let the water run all night. The artificial rainstorm saved the plants from the frost.

Certain business men in Chicago are trying to arouse interest among rich gamblers and others in the butter and egg business. Newspaper advertisements intimate to the public that it is just as easy for the city man to buy and sell butter and eggs in carload lots as to gamble in stocks, wheat or cotton.

* * *

The wife of a Japanese government official is getting together in Japan a group of girls who are willing to cross the Pacific Ocean to marry Japanese bachelors in Mexico and South America. She hopes to find wives for ten thousand of her countrymen who are now living in Mexico and in Brazil, Argentina and other South American countries.

* * *

The original name of the city of Los Angeles, California, was "Nuestra Senora la Riena de Los Angeles." It means, "Our Lady, the Queen of the Angels." The city was founded by royal decree of the King of Spain in 1781. Now Los Angeles produces eighty-five per cent of the world's motion pictures.

* * *

In the Republic of Germany an order has gone out restoring to the national flag the colors of the old Imperial German flag. The colors of the republic are relegated to an upper corner of the new national emblem. The supporters of the republic are said to be furious, while those who long for the good old days are happy.

Letters from Forum Friends and Members

OUR YOUNG PEOPLE'S FORUM.

Dear Cousin Ruth and Forum Friends:—I got the membership pin you sent me and I thank you for it. I guess you all thought that I wouldn't write again.

The other day I saw two blue birds. They were hopping on the ground. I gathered some flowers today. I have a little garden and I plant flowers in it every summer.—Helen Eiker (X), Frederick County, Md.

Dear Cousin Ruth:—This is a picture of myself, my two brothers, my four cousins and our pet cats.

These cats are very tame and playful and will follow us anywhere we go or at least want to. They will chase a ball and hide around places where they think they cannot be seen, then they will jump and try to scare the other ones as it passes. The four young cats are about three months old. Their mother, Tabby, could not be found when we took the picture. Their names are Blacky, Jessy, Tommy and Billy.

The old cat that I am holding weighs eight and one-half pounds. His name is Petty but I sometimes call him Old Pet. He is about seven years old.—Esther L. Bell (X), twelve, Greene County, Pa.

OUR PET CATS HAVE THEIR PICTURES TAKEN
Esther L. Bell (X), Greene County, Pa.

Dear Cousin Ruth.—We are sure having fun at school. Cousin Ruth, I wish you were here this morning and could see the pet crow. He sat on the washing machine while we ate breakfast. We don't know who owns him.

I am sending a recipe for a cake which I think is very good. I am to bake one today. I would send you a piece but it would be spoiled before it would get there.

ANGEL FOOD CAKE

Sift eight times 1½ cup of sugar, 1 cup of flour. Beat 11 egg whites till almost stiff, put in 1 teaspoonful of cream of tartar and fold in slowly the sifted flour and sugar.—Alta Weld, Mercer County, Pa.

Dear Cousin Ruth:—I received your birthday card and I thank you very much for it. I will tell you where I spent my birthday. My teacher, Pauline Heasley, took me home with her and I had a very good time. We went to town and we went to the movies. My teacher gave me a book for my birthday present.

Our school will be out on May 7th. I wish it would be longer. I like to go to school. I am in eighth grade and could go to high school if I pass the high school entrance examination. We took our test on Saturday, April 24, 1926.

Cousin Ruth, I would send you a picture of my pet but I don't have a camera. I'll tell you about my dog tho I have no picture of it. My dog's name is Susie. She got that name from her great-grandmother. She is an Airedale. She is black and brown. She is a year and a half old. She had eight pups last year and she has eight this year. They are the same as she and they are the prettiest creatures you ever saw. When they are hungry they whine. I enjoy playing with them very much.

When they grow a little older we will teach them many tricks. They grow very fast. I wish you could see them.—Viola Spellich, twelve (X), Lawrence County, Pa.

Hello! Cousin Ruth and Forum Friends:—I received my membership pin and like it. I haven't written for quite a while but don't think I have forgotten our page and all that make it up. Oh, spring is here and I am so glad for we can play all kinds of games out of doors.

I have been so busy with my lessons and home work I could hardly find time to write, but I just took time this evening.

Cousin Ruth, I wish you could be with us at school. We have the most fun playing baseball you ever saw. We often play, the girls against the boys. Some times the boys win, some times the girls win.

On our school ground we have a very large oak tree, in fact it is the largest and oldest around here. No one knows how old it is. Even the very oldest person in our neighborhood says it has always been that large ever since he was quite a little boy. He is almost ninety years old. It does not have any dead limbs on it yet and it gives a wonderful shade. It has large roots that reach out over a creek. In the summer we children enjoy eating our lunches there. I wish you all could see it in the summer when it is thick with green leaves. We enjoy more than one game under it in the summer when the sun is shining hot. We do not have to go into the hot sun to play. We can play any game we wish under this old tree. At the close of the school year we always hold a little picnic under this large oak and play all kinds of games.

I think that idea of Mary Sunshine's is very nice.—M. Ruth Summers (X), Frederick, Md.

Dear Forum Friends:—I received your letter and club pin this morning. I would like to have a photograph of our pear orchard and early apple trees as they are all out in blossom and the birds are beginning to build their nests in them. By May 10 I will be out of school for vacation and we will have to pick strawberries.

Next week my brother James is going to bring a radio from the city and I will write and tell him to bring his camera and take my picture holding the big turkey I told you about and I will also tell you of some of the bedtime stories I hear on the radio.

I think it a good plan to have a Nature Lover's Club on our Forum friends' page.—Thomas Landy (X), Atlantic County, N. J.

Don't forget to send the picture you promised. Are the strawberries ripe now?

COUSIN RUTH

Dear Cousin Ruth:—I received your letter and the Forum membership pin. Thank you very much for the pin and also for sending it to me. Was pleased to hear that you found my letter interesting. I will write a letter occasionally for "The Young People's Forum" and if I have any interesting pictures I will send them to you also. Cousin Ruth, if you ever come to Towanda, I wish that you would come to see me.—Winnifred Woodruff, (X), Bradford County, Pa.

Thank you for the invitation, Winnifred. I should like to visit you sometime if I ever reach your county. You may be grown up and moved before I get there, tho!

COUSIN RUTH

Dear Cousin Ruth and Forum Friends:—Cousin Ruth, I wish you could see our little lambs. We have forty-four. We have two we feed on the bottle. One is mine and the other is my sister's.

I call my little lamb Johnnie. It is white and always knows just when I am coming.—Mary C. Mosteller, twelve, Lycoming County, Pa.

Dear Forum Friends:—In the summer I help work the ground. I go to school all I can. We boys at school play baseball and dodge-ball. For pets I have a dog and pony. The pony is white and brown and the dog is black and white. I have two brothers older than I am and one younger.—Frank B. Condon, Carroll County, Md.

Dear Cousin Ruth and Forum Friends:—I have four cats and have them all named. One likes to come in the house. I call him Banner Tail. He is a good-natured cat. I can do anything with him. We have a flock of sheep. I also have a little Bantam hen and rooster. I call them Punch and Judy.

I like birds, and I am glad they have come back to us. I will be glad when summer comes. I like nice weather.—Ruth E. Vance, eight (X), Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—I will try to join your club! I have a little hen and she is one-half year old. She lays an egg almost every day. I sell the eggs and I get the money. Here is a recipe.

CHOCOLATE CAKE

½ cup cocoa
½ cup white sugar
½ cup sweet milk
Yolk of 1 egg
Boil well together and let cool.
1 cup sugar
½ cup butter
2 eggs
½ cup sour milk into which
1 teaspoon soda has been dissolved. Mix these together and add two cups flour. Bake in moderate oven in layers. Ice with chocolate icing and nuts.—No name given, Carroll County, Md.

One more Forum friend must have forgotten she had a name! Girls and boys who don't sign their names and addresses can't become Forum members, remember.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You have all heard of telegrams, but I wonder if you knew that the first time the telegraph was used was on May 24, 1844. That's a long time ago and there have been many improvements since that day so long ago. With the help of the key I have given you under the word TELEGRAM you will be able to read the message I am sending you this week in the queer looking words. For instance, wherever you find the particular sign which appears under the letter "T" in the word TELEGRAM, you will know that the letter "T" is meant, and so with the signs which are under the other letters in that word. When you have made out the sentence, using the letters given together with the letters meant by the signs you will have a complete sentence. When you have found this sentence send it to me on a POSTAL CARD so that it reaches me by May 29th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks are very careless and make simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the May 1 issue of Pennsylvania Farmer is: 11 plus 11 plus 1 plus 1 plus 1 equals 25.

The puzzle prize winners are: Louise Allen, age 10, Powell, Pa.; Clarence Anderson, age 10, Carlisle, Pa.; Gladys Beatty, age 11, Apollo, Pa.; Marie Dingy, age 10, Locke, N. Y.; James Heckert, age 6, Elizabethville, Pa.; Mildred King, age 11, Cambridge Springs, Pa.; Howard Liegey, age 9, Lecontes Mills, Pa.; Hubert Liegey, age 8, Lecontes Mills, Pa.; Zelma E. Shuey, age 12, Bellefonte, Pa.; Alice Stewart, age 10, Homer City, Pa.

A Wealth of Bloom All Season

These Ideas of Flower Lovers May Suggest Ways to Make Your Home More Beautiful and Busy Days Happier

Plant Flowers About the Home

WE WANT to help you make your homes more beautiful and your busy days happier so this week we are giving you advice and experiences from our readers. Read these hints from flower lovers—send to the Department of Agriculture, Washington, D. C., and get Farmer's Bulletin 1087, on Beautifying the Homestead, then rejoice with Our Page Folks in the delight coming from flowers. Nothing rests me more than to look out upon a stretch of mossy green, with here and there spots of gorgeous color. Especially do I want the kitchen outlook to be bright and cheering.

One of my neighbors has most marvelous blooms in the front yard, but the family spend nearly all the time in the rear of their great rambling dwelling, and rest on a huge side veranda. The back yard and side yard are absolutely barren, while folks driving by have keenest delight in the riot of bloom adorning the front yard.

If you cannot have flowers in both places, do plant at least a few gay posy seeds to be enjoyed by your home folks as they go to and fro doing the hot summer chores.—Home Page Editor.

THE florists have long recognized the charm of our native flora and yearly offer many things we might have for the digging. Some firms sell only native plants and shrubs. The landscape architect recognizes their beauty and utility and rarely plans an estate without including a goodly proportion of native plants among those from foreign lands.

There is grave danger that the wildwood will lose its charm of shrub and flower and vine but true nature lovers will not rob the roadsides, nor take rare plants from their natural environment unless civilization seems likely to exterminate them. Rather they will seek a place where the desired plants grow in abundance, and will take only a few, lifting each plant with care, taking as much soil as possible, and wrapping each one carefully in plenty of paper.

Must Have Proper Care

A plant may be taken when in full bloom and, if given proper care, water and partial shade until the roots re-establish themselves, will take up life in its new location almost as tho nothing had disturbed it. Some plants should be taken in flower if one is to be sure of getting what he wants.

When one comes to choose the wild flowers for transplanting he may be bewildered by the variety he has to select from. First it is wise to consider the place available. Nearly all of the spring flowers, trilliums, bloodroot, anemones, some violets, spring beauty, Dutchman's breeches, squirrel corn, hepaticas, columbine, the two false Solomon's seals, large and small, the early meadow rue, Jack-in-the-pulpit and goldthread will do well in any partially shaded spot. As nearly all of these blossom, fruit and then disappear, they may be planted around shrubs or in an angle of the house where ferns will flourish later.

One spring flower most loved by all who know it, is the trailing arbutus. This is very difficult to transplant and because it is now nearly exterminated in many localities, no one should attempt it unless he knows he has conditions favorable to its growth. Trailing arbutus belongs to the great family of the heaths, nearly all of which refuse to be wholly happy if planted in a soil where there is lime. Given a sour soil, made by the decomposition of granite or gneiss, and partial shade, it may flourish for years, even in city gardens.

To Lengthen the Season

If one wishes to continue the wild flower season in his garden, let him plant a few,—oh very few,—yellow lady slippers, or their more stately sister, the showy pink and white one. These come under the head of rarities and not more than one or two should be taken unless the woods in which they grow is about to be destroyed. Even one plant will soon multiply in the rich garden soil. The stemless lady slipper or moccasin flower, is much more difficult to transplant and had better be left where it is.

Aside from the lady slippers there are the meadow lilies, the tall meadow rue, the orange milkweed, turtlehead, hare bells, cardinal flower and giant blue lobelia, all of which will be a joy from year to year, as these are all perennials. If the garden conditions are favorable they will make even more robust growth than when forced to struggle for existence in their native habitat. One meadow lily surprised its owner by sending up a blossom stalk more than five feet tall which bore thirty-six of the beautiful orange bells.

To provide late summer and fall flowers one may plant golden rod (unless he is afraid of hay fever) and our native asters, blue, purple and white. The royal aster, bearing great clusters of royal purple blossoms on tall leafy stems, is one of the most dignified and stately, but the smaller, more delicate varieties are worthy of a place in any garden. Especially is this true of the variety known in some parts of the country as "farewell-summer."

With the asters the wild flower season officially closes. From April to November they lavish blossoms and fragrance and even in November if the days are mild, one may find a few dainty flowers of the Canadian violet, for this violet is not merely a spring flowering plant, but produces blossoms all summer and into the late fall,—a habit shared by only a few of the garden darlings.—Orra Parker Phelps, N. Y.

Some Need Little Care

WHEN planting the home garden, do not forget to sow a few flower seeds here and there along the rows. Especially is this wise among bush beans, carrots, parsnips, lettuce, radishes, and onions.

There are many flowers that require but a bit of space, yet are showy and beautiful. Chinese poppies are tiny stemmed and leaved, yet sway their lovely blossoms gracefully over the vegetables. We have the pink-edged white single ones and the purple-edged scarlet varieties and there are many other beautiful varieties.

If poppies are picked the first morning they open, and before the sun's rays strike them, they will last in bouquets for two days without dropping or drooping.

California poppies and the giant double poppies require more room, as their foliage is dense and high. A clump of them here and there brightens the garden wonderfully.

I usually plant my gladiolus bulbs along the rows of onions, radishes, and beets. By blooming time the bulbs are in entire possession, and a lovely sight. Sweet peas, asters, salvia and zinnias require a spot by themselves, often near the fence. And be sure to have some sweet herbs—caraway, dill, sage, lavender and parsley.—Clarice Raymond, N. Y.

Flourish in Poor Soil

SOMETIMES there is a corner of the yard where the soil is poor and yet in other ways the location seems ideal for a flower bed. For some flowers this is much better than the most fertile spot. Nasturtium, for instance, grows rank green leaves and very few flowers in rich soil while in a poor or sandy soil the plant is a mass of bloom.

Portulaca, a bright colored low-growing annual, especially popular because it can be transplanted, and will sow itself, coming up year after year with very little care, likes dry and unfertile soil.

Godetias make a rank growth in rich soil but are things of beauty in poor, while calendulas or pot marigolds repay in floral gold the gardener who puts them in the dry sandy soil of the garden bed that has never been fertilized.

Zinnias and Kochia

Zinnias thrive in poor soil and are not particular as to whether they grow in sun or shade. Kochia or summer cypress is a quick growing foliage plant at its best in poor soil, along a fence or about a heap of stones. This also grows from seedlings and will not need replanting.

Sandy soil where the drainage is good is best for California poppies. If there is a low pile of brush, trimmings from the rose bushes perhaps, in one corner of the garden, sow California poppies there. Their foliage of a charming silver color will soon cover the support and they will transform the corner into a veritable blaze of color.

Poppies of any color or kind do well in poor soil but must have plenty of sunshine.—Lalia M. Thornton, N. Y.

Prize Sewing Hints

IN MENDING children's stockings at the knees, I use the ribbed tops of father's worn out socks. After cutting them carefully off the balance of the sock, slip the child's stocking thru this cuff and fell down at both edges with short stitches. It is a process much quicker than darning and much stronger, too.—Mrs. I. W. Michael, Pa.

Editor's Note:—The final prize winning letter will be published in next week's issue. In the issue of June 5, we will give a summary of the many splendid suggestions which have not been used to date.

Don't Forget to Include a Perennial Border of Old Favorites

ONE of the most enjoyable parts of a garden is the perennial border where one may go every spring and thruout the summer, and find old friends among the clumps of bleeding hearts, iris, peonies, phlox, day lily, tiger lily, and others.

A perennial border looks best with a background of hedge or shrubbery, and is very suitable along a fence. Keep it as far from trees as possible, as roots run long distances sapping the moisture and plant food from the soil, and casting too much shade for many varieties.

Wide borders are most delightful, but one wide enough for but one row of plants is better than none and can be kept most attractive from early spring till autumn frosts.

Be sure to bring your soil into such condition that it will not bake and become hard in dry weather. If your ground is heavy clay, remove to a foot or more in depth, and replace with rich, loamy soil. Aim to have a soil than can be worked readily shortly after rain.

The best tool to use is a narrow rake, the back of which is used for loosening weeds and the front for taking them from the soil and for keeping the surface loose.

With very little expense the following perennials can be growing in your border: Iceland and Oriental poppies, columbines, coreopsis, gaillardia, campanula, platycodon, lupine, and delphinium. The hollyhocks and sweet william will seed themselves freely, and foxglove, altho a biennial, deserves space in the border.

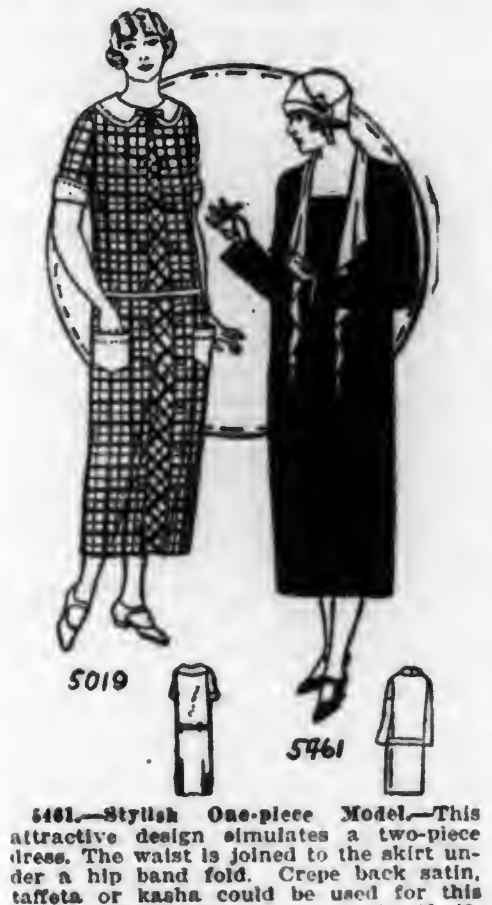
To insure continuous bloom, a few seedlings will help out. Late summer and autumn will need heleniums and Michaelmas daisies. Excellent late bloomers are asters, Japanese lilies and Japanese anemones.

A top dressing of rich soil and well rotted manure added from time to time will keep the plants in excellent condition and insure good bloom.—E. W. G.

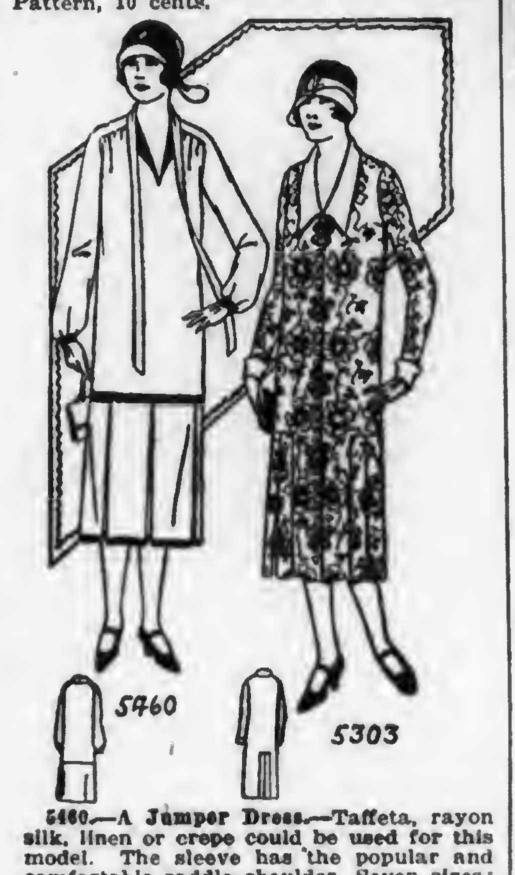
Stylish Summer Dresses

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5019.—Neat and Dainty.—This model is attractive in checked gingham, linen, percale, ratine or crepe. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. If made as illustrated, it will require 5⅛ yards of 27-inch plaid gingham, and ¾ yard linen or percale for pockets, collar and cuff facings. Pattern, 10 cents.



5461.—Stylish One-piece Model.—This attractive design simulates a two-piece dress. The waist is joined to the skirt under a hip band fold. Crepe back satin, taffeta or kasha could be used for this model. Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size will require 4¼ yards of 40-inch material, together with ⅞ yard of contrasting material for the jabot collar and facings at the sleeve edges, if made as illustrated. If made of crepe back satin, the crepe side could be used for contrast. Pattern, 10 cents.



5460.—A Jumper Dress.—Taffeta, rayon silk, linen or crepe could be used for this model. The sleeve has the popular and comfortable saddle shoulder. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4⅛ yards of 54-inch material, together with ¾ yard of contrasting material for revers facing, cuffs and facings on blouse and skirt edges as illustrated. Pattern, 10 cents.

5303.—Attractive Coat Dress.—Figured silk with trimming of crepe in a contrasting color is here portrayed. This design could also be developed in fine serge or in broadcloth. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4⅝ yards of 40-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

Our Polling Place

IN A RECENT article you described the polling place in your district. May I tell you about ours? It is a hall with plenty of light, windows on two sides, well-ventilated and pleasant. Election days are visiting days in this township. Men and women after voting remain a while for a bit of a "gab-fest" with others whom they have not seen for months, —perhaps not since the last election day.

Usually, two or more women are working at the long table reserved for the use of the election board. They are either clerks or inspectors. A bit of fancy work, a box of candy, a new magazine lying close by reveals the fact that there are long intervals when no one comes to vote and the time must be beguiled somehow.

Rosy-cheeked children enter with their parents and their presence is sincerely welcome. There is usually a rush hour in the morning when the farmers are bringing milk to the station or the cheese factory, another after noon and another just before the polls are closed. Then people especially interested in the election of some favorite candidate drift quietly into the back part of the room and wait with varying degrees of impatience until the votes are counted.

There are pathetic incidents and humorous ones. Someone searches the ballots for the name of a man who is dead, others look for a name on the wrong party ticket, several have forgotten their spectacles, someone proclaims to all and sundry that he will put a cross after every lady's name, another announces every year, as he drops his ballot in the box, "There, the country is saved."

Many do not seem to have settled their various convictions until the last minute, one wonders if they remember for whom they voted after they leave the room. Most of the votes represent the honest, thoughtful decision of people who know the value of government by the people. There is little, if any, bribery or coercion.

We would prefer that candidates when sending out their appeals for support tell us just where they stand on the important matters they will help decide, if elected, instead of saying "I have been a loyal Democrat (or Republican) since I cast my first ballot." Voting "straight" is becoming less popular each year, deservedly so.

We are indebted to the farm papers for clear statements about important issues. We wish that reliable information concerning each person running for office might be published for we often find names, perhaps in a list of electors or the like, that are unfamiliar and later have found that we voted for the wrong man on the right ticket.

Thanking you for the stand your publication has taken on questions of national welfare.—M. C. S., Potter County, Pa.

Michigan Feeds this Ration
to Over 1700
State-Owned Pure Breds

—and averages more than 10,000 lbs. of milk per cow, annually

Increased production is the first result of feeding Michigan State Rations everywhere, every time. More milk per cow—more money, for what you sell—more dairy profit at the end of the year.

One herd reports an increase of 400 lbs. per day. Others report bigger production, smaller feed bills—and more profits.

MICHIGAN STATE RATIONS
Open Formulae, Scientifically Balanced Dairy Feeds.
Used by State Herds of Michigan, Michigan State Grange, Cow Testing Associations and thousands of Dairymen.
Eight different Formulae according to need of herd
Increases Milk Production and Dairy Profits.

A Feed for Every Need

Eight different formulae—one for every need—each prepared by dairy experts to insure the right feed for every herd,—a feed adapted to the needs of each herd. Michigan State Rations formulae were prepared for the use of State-owned herds—not for selling purposes. They were designed to give the right proportions of protein, fat, and digestible nutrients to insure big milk production.

Cost Less than Ordinary Feeds

The materials used in Michigan State Rations actually cost more than those in ordinary feeds but you can buy them for much less. You pay only for materials and milling. Direct selling from the mill to you eliminates middlemen's profits, high expenses and commissions to salesmen. You buy at a price that saves you $4.00 to $8.00 per ton.

Get the Facts: *Ask for a complete description of Michigan State Rations. Select the one best adapted to the needs of your herd,—then buy that feed at a big saving. Write today!*

A. K. ZINN & CO., 1505 Liberty Street, Battle Creek, Mich.

Feed it to Your Herd!
at the Same Price
Per Ton and Save $4. to $8.!

How to have Fresh water under Pressure

Hot water for bathing and shaving—running water in the kitchen and the barnyard! The *convenience* and *comfort* derived from a *pressure water system* are too *important* to be left to snap judgment. Consult specialists in water supply!

To Duro belongs the credit for developing Duro Advisory Service, the only *practical plan* by which you are *assured satisfactory water service*, or money back.

Duro makes water systems for *every possible use*, with capacities ranging up to 2100 gallons per hour and prices ranging down to $79.50.

The illustration is of Style 3000 Deep Well Pump, which will furnish the equivalent of *city water service* to any town, suburban or farm home where the well is not more than 500 feet deep. Cost of operation about one cent per 100 gallons wherever electricity is available.

Let Duro engineers help you select your system.

Oats—Car lots, as to location: No 2 white, 51½@52½c; No 3 white, 50½@51½c.

DAIRY MARKET

Butter—Extra, 92 score, 42½c; higher-scoring goods, 43½@46½c, the latter for small lots, 91 score, 41½c; 90 score, 40½c; 89 score, 38½c; 88 score, 37c; 87 score, **36c; 86 score, 35c; best prints, 92@94** score, 45@46c; cartons, 46@47c; good prints, 88@91 score, 43@44c; cartons, 44@45c; ordinary farmers' prints, 37@42c.

Cheese—New York, whole milk, flats, held, 28@28½c; longhorns, round lots, 20½c; jobbing, small lots, 22@22½c; single daisies, held, 24½@25½c; fresh, 20½c.

LANCASTER MARKETS

May 17, 1926.

PRODUCE

Butter and Eggs—Country butter, 50@55c; creamery, 45@58c; fresh eggs, 30@32c.

Dressed Poultry—Chickens, $1.10@1.65 ea; ducks, $1.50@2.25 ea; guineas, $1.35@1.70 ea; squabs, 30@45c ea.

Vegetables—Asparagus, 13@15c bch; beans, string, 25c qt; lima beans, 35c qt; beets, 10@15c bch; Brussels sprouts, 30c qt; cabbage, 5@35c hd; carrots, 8@10c bch; cauliflower, 20@60c hd; celery, 10@20c stalk; cucumbers, 10@15c ea; dandelion, 10c plate; eggplant, 15@25c ea; endive, 10@15c head; lettuce, 10@25c hd; mushrooms, 30c pint; onions, 8@10c quart; parsley, 2c bunch; peppers, 5c each; peas, 25c qt; poke, 10c bch; potatoes, old, 50c ½ pk, new, 20@25c qt, 35c ¼ pk; radishes, 5c bch; rhubarb, 5c bch; salsify, 10c bch; scallions, 5c bch; spinach, 13@15c ¼ pk; sweet potatoes, 15@20c ¼ pk; tomatoes, 25c pt.

Fruits—Apples, 15@25c ¼ pk; strawberries, 45c qt.

Grains (prices paid to farmers)—Milling wheat, $1.40 bu; corn, 75c bu; baled hay, timothy, $16@17 ton; straw, $10@11.

Feeds (selling prices)—Bran, $37@38; shorts, $36@37; hominy, $36@37; middlings, $41@42; linseed, $60@61; gluten, $44.50@45.50; ground oats, $38.50@39.50; cottonseed, 41 per cent protein, $44@45; dairy feeds, 16 per cent, $33@34; 18 per cent, $38@39; 20 per cent, $40@41; 24 per cent, $45@46; 25 per cent, $48@49; horse feed, 85 per cent, $42@43.

LIVESTOCK

Review of local market for week ending May 15, 1926: Market extremely dull. Compared with week ago: Beef steers, quality considered weak, 15@25c lower; top, $9; some held higher; bulk, $8.25@8.75; nearby animals showing considerable improvement in quality. Bulls and heifers slow, about steady. Cows, weak, mostly 25c lower; bulk, $4.25@5. Canners and cutters steady. Calves steady; top vealers, $14.50. Hogs inactive; no fresh receipts.

Receipts for Saturday's market: Cattle, 3 cars, 2 from St Paul, 1 Penna; containing 84 head; 501 head trucked in from nearby farms. Total: cattle, 585. Receipts for week ending May 15, 1926: Cattle, 26 cars, 22 from Penna, 3 St Paul, 1 Ohio, containing 597 head, 1244 head trucked in. Total: cattle, 1841 head, 221 calves, 74 hogs, 73 sheep. Compared with previous week: cattle, 28 cars containing 597 head, 1280 trucked in. Total: cattle, 1877 head, 223 calves, 357 hogs, 91 sheep.

Steers:—	
Good to choice	$8.75@9.25
Fair to good	8.25@8.75
Medium to fair	8.00@8.25
Common to medium	7.00@8.00
Cows:—	
Good to choice	6.00@7.00
Medium to good	4.75@6.00
Common to medium	4.00@4.75
Canners and cutters	3.00@4.00
Calves:—	
Good to choice	13.25@14.50
Medium	10.00@13.25
Common	5.00@10.00
Hogs:—	
Heavyweights, 200@250 lbs.	13.25@14.00
Mediumweights, 150@200 lbs.	14.00@14.75
Lightweights, 100@150 lbs.	14.25@14.75
Rough stock	10.75@13.25

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .41⅛	$ .41	$ .38	$ .44
Eggs, fresh gathered extra firsts (N. Y.)	.32⅜	.31¼	.30¾	.33
Potatoes, 150-lb sacks (Philadelphia)	5.12½	5.00	8.37½	1.47½
Steers, good to choice (Lancaster)	9.00	9.00	9.37½	9.75
Hay, Number 2 timothy, baled (Phila.)	24.50	24.50	24.00	18.50
Wheat, No. 2 red winter (Philadelphia)	1.70½	1.71	1.80¾	1.89½
Corn, No. 2 yellow (Philadelphia)	.76¼	.76¼	.79¼	1.32½
Oats, Number 2 white (Philadelphia)	.52	.51½	.53½	.59½

YORK PRODUCE

Butter and Eggs—Country butter, 45@55c; separator, 50@55c; eggs, 26@30c doz.

Vegetables—Potatoes, old, 25@50c ½ pk; new, 50@70c ½ pk; cabbage, 8@20c hd; lettuce, 10@25c hd; celery, 8@15c stalk; carrots, 10@15c box, 18c ¼ pk; horseradish, 5@10c glass; onions, 10@18c box, 3@7c bch; beets, 1@5c; soup beans, 10@15c pt; lima beans, 35c qt; spinach, 15@20c ¼ pk; turnips, 8@10c box, 15c ¼ pk; new beans, 30@35c ¼ pk; peas, 35@40c ¼ pk; asparagus, 8@18c bch; rhubarb, 3@10c bch.

Fruits—Apples, 15@30c ¼ pk, $1.50@3.50 bu; strawberries, 30@50c qt.

Retail Grain Market—Wheat, $1.90; corn, $1; rye, $1; oats, 75c; bran, $1.90 cwt; middlings, $2.30 cwt.

Wholesale Grain Market—Wheat, $1.60; corn, 72c; rye, 85c; oats, 55c; bran, $38 ton; middlings, $44 ton.

BALTIMORE PRODUCE

Eggs—Market slightly higher; nearby fresh-gathered firsts, one sale, 60 cases, 28¾c; three sales, 165 cases, 29c. Closing offerings for nearby fresh-gathered firsts, 29@29½c, bid 28¾c. Quotations for fresh-gathered firsts, free cases, all sections, 28¾@29c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 34@35c; 3½@4 lbs, 35c; Leghorns and other light stock, 30@32c; old roosters, 20@22c; young chickens, large size, fat, 40@42c; Leghorns and other light stock, 30@34c; all kinds, poor and thin, 30@32c; springers, 1¼ lbs and over, 45@52c; springers, White Leghorns, 40@45c. Ducks, White Pekins, 24@26c; Muscovy, young, 22@24c; puddle, 20@21c. Guineas, young, large, 75@85c; old, 35@50c. Pigeons, young and old, pair, 40@50c.

Butter—Creamery, fancy, 42½@43c; do, choice, 41½@42c; do, good, 40@41c; do, prints, 43@45c; do, blocks, 42@44c; do, ladles, 33@34c; Md and Penna, rolls, 28@32c; Ohio and W Va, rolls, 28@32c; store packed, 28@29c; Md, Va and Penna, dairy prints, 23@32c; process butter, 36@37c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Fat steers after advancing 25c slumped; most early advances on matured steers being erased; yearlings 10@15c higher; light yearling heifers shared advance; other classes of she stock fully 25c lower; bulls, 15@25c down; vealers mostly $1 higher; supply reduction and better distribution featured general steer trade; extreme top heavies, $10.35; yearling steers, $9.90; light heifer yearlings, $10.15; sizeable sprinkling 1350@1360-lb steers, $10@10.25; light stockers scarce; country trade moderately broad; steady to strong.

Hogs—Slow, 10@25c higher; few lighter weights scored full advance; bulk 240@300-lb butchers, $13.35@13.75; majority desirable, 200@225-lb averages, $13.85@14.15; better, 180 lbs down, largely, $14.15@14.35; top on 180 lbs, $14.40; packing sows, mostly $12.35@12.60; odd lots of slaughter pigs, $14@14.25; shippers, 1000 head; estimated holdover, 1000 head; heavyweight hogs, $13.10@13.75; medium, $13.50@14.25; lights, $13.25@14.40; light lights, $13.40@14.40; packing sows, $12.25@12.75; slaughter pigs, $14@14.50.

Sheep—Compared with week ago: Fat lambs generally steady; sheep, $1.50@2.50 lower; supply of California springers increased; sheep on direct billing to packers liberal. Week's top prices: Old crop wool lambs, $15.75; clipped lambs, $15.25; Calif springers, $16.75.

NEW YORK MARKETS

May 17, 1926.

PRODUCE

Butter—Creamery, higher than extras, 41¾@42½c; do, extras, 92 score, 41@41¼c; do, firsts, 88@91 score, 38½@40c; packing stock, current make, No 2, 28c.

Eggs—Fresh gathered, extra firsts, 32@32¾c; do, storage packed, 33½@34c; fresh gathered firsts, 30¾@31½c; do, storage packed, 32@32¼c; fresh gathered, seconds, 29½@30¼c; nearby hennery whites, closely selected extras, 37@38c; nearby and nearby western hennery whites, firsts to average extras, 32@36c; nearby pullets, 30c; nearby hennery browns, extras, 36@38c; Pacific Coast whites, extras, 38½@39c; do, firsts to extra firsts, 33@37½c.

Cheese—State, whole milk flats, fresh, fancy to fancy specials, 20@21c; do, average run, 19½c; state, whole milk, flats, held, fancy to fancy specials, 26@28c; do, average run, 25@26c.

Live Poultry—Broilers, by freight, 45@50c; do, by express, 35@55c; fowls, by freight, 34@35c; do, by express, 35@36c; roosters, by freight, 19@20c.

Dressed Poultry—Chickens, fresh, 40@50c; do, frozen, 30@46c; fowls, fresh, 29@37c; do, frozen, 29@36c; old roosters, 20@26c; turkeys, fresh, 35@45c; do, frozen, 42@62c.

LIVESTOCK

Cattle—Steers, $7@10.20; state bulls, $4@7.25; cows, $2.50@3.75.

Calves—Veals, common to prime, $6@14; culls and little calves, $6@7; grassers and fed calves, $5@6.75.

Sheep and Lambs—Sheep, $3@9; culls, $2@3; lambs, Ohio, medium to prime, $10.50@15; state, common to prime, $9@15; culls, $7@10; springers, 71 lbs, $18.50 per 100 lbs.

Hogs—Light to medium weights, $13.50@14; pigs, $14.50@15; heavy hogs, $13@13.50; roughs, $10.50@11.

HAY AND GRAIN

Feed—Quotations: City bran, $34; middlings, $32, in 100-lb sacks; red dog, $40, nominal, in 100-lb sacks; western spring bran, prompt shipment, $32.50@33; standard middlings, prompt shipment, $30.50@31; flour middlings, prompt shipment, $37; red dog, prompt shipment, $38@38.50, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.50, in 100-lb sacks; cottonseed meal, 36 per cent protein, $39.25; prompt shipment linseed oil meal, $51.85, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $30; No 2, $28@29; No 3, $26@27; sample, $10@20. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.85⅞; No 1 dark spring, c i f, domestic, $1.79⅞; No 2 hard winter, f o b, export, $1.77⅞; No 1 North Manitoba, in bond, f o b, export, $1.70½; No 2 mixed, f o b, export, $1.50¾. CORN, No 2 yellow, 87¼c; No 3 yellow, 85c. OATS, No 2 white, 51½c; No 3 white, 50½c; No 4 white, 49c; ordinary white, clipped, 50½@52½c; fancy white, clipped, 54@55½c. RYE, c i f, export, 95⅛c. BARLEY, malting, 82¼@85c.

WOOL MARKET

Boston, May 15, 1926.

Domestic: Ohio and Penna fleeces—Delaine unwashed, 44@45c; ½-blood combing, 44c; ⅜-blood combing, 43@44c; fine unwashed, 38@40c. Michigan and New York fleeces, Delaine unwashed, 43@44c; ½-blood combing, 43c; ⅜-blood combing, 43@44c; ¼-blood combing, 42@43c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England, ½-blood, 40@41c; ⅜-blood, 40@41; ¼-blood, 39@40c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 15, 1926.

Cloverseed, cash, domestic, $21; imported, $14.85; October, $17.15. Alsike, cash, $17. Timothyseed, cash, $3.45; September, $3.70.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 17th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$33.25
Spring bran	32.50
Soft winter wheat bran	36.00
Hard winter wheat bran	33.00
Standard middlings	30.00
Soft winter wheat middlings	33.00
Flour middlings	34.00
Red dog flour	37.50
White hominy	31.70
Yellow hominy	31.70
Gluten feed	39.35
36 per cent cottonseed meal	38.50
41 per cent cottonseed meal	40.50
43 per cent cottonseed meal	42.50
34 per cent linseed meal	50.00

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

NEARBY asparagus was in moderate supply on the Philadelphia market according to the Pennsylvania and Federal Bureau of Markets. The early trading was fair, with late demand and trading slow. Supplies were fairly well cleaned up, market about steady with a dull undertone. White asparagus moved slow at unchanged prices. The demand for white was slow for the entire week ending May 15th.

Strawberries were fairly active on the wholesale market. The market was slightly stronger with prices showing a wide range according to quality and condition. Truck and express receipts of Eastern Shore Virginia berries were more plentiful. Offerings of new potatoes were rather limited and while number, one stock was firm with a fairly good demand, twos and culls moved slow and were barely steady. There was only a limited demand for old potatoes.

Mushrooms were in liberal supply, market weak and prices lower. Supply of nearby spinach was moderate and market about steady. There was a wide range in the quality and condition of the stock. Radishes and rhubarb held about steady.—W. R. Whitacre.

Butter Markets

LIGHTER receipts and an increase in buying interest were factors partly responsible for the strengthening of the butter markets during the week ending May 15th. Trading early in the week under review was rather slow due to the fact that many of the larger operators supplying consumptive trade had bought head of their current requirements and were temporarily off the market. As the week progressed and these buyers again began operating to replenish stocks the general tone of the markets improved and slight price advances were registered on all markets.

In spite of the more active trading and firmer tone there was an element of uncertainty and nervousness apparent in the situation. Opinions expressed by members of the trade varied widely and it was difficult to obtain definite expressions as to future trend.

During the week under review receipts of butter at the four markets were some 4000 tubs lighter than for the preceding week. These lighter arrivals restricted the amount of butter available for trading and were in a measure responsible for the more active trade and firmer advancing markets.

County News and Comment

Broome County, N. Y.—Spring work is being rushed but is very much behind. We have continued cold, dry weather and fields are too dry to plow. Many farmers are turning stock out early because they are out of hay. Many oats are not sown. A few peas and early potatoes are sown. Road work was begun late but mud roads are good. Eggs, 28c; butter, 43c.—E. M. C., May 13.

Indiana County, Pa.—This has been an unusually dry spring. We have not had a real good rain this season. All crops have been stunted. The oats, which is practically all sown, was put out in fairly good shape considering the season. Corn ground is nearly all plowed and farmers are waiting for rain. A small percentage of corn has been planted. Cattle and cows have not been turned to pasture and the hay, straw and fodder is very scarce. Grass is growing slowly now. Indiana County is so worked up over elections that there won't be much farming done until after the 18th. Hogs still scarce. Are selling for $7 apiece at six weeks old or $12.50 for fat hogs. Milk is about $2.50 per 100 and retails at 12c. Eggs, 25c; butter, 40c.—H. A. N., May 10.

Juniata County, Pa.—Vegetation is about two weeks late on account of cold weather. Blossoms have just made their appearance the last few days. A freeze on the night of May 4 probably did considerable damage to cherry and peach blossoms. Potatoes are just being planted. New potatoes shipped here are taking advantage of the late planting and are soaring up to $5 and $5.50 per bushel. The wheat and grass also is late. Oats is making a very slow start and is badly in need of moisture. Considerable plowing to be done yet for corn, some few have started planting. More farmers seem to be going into the poultry business every year.—C. B. L., May 8.

Passaic County, N. J.—The temperature for the past month has been below normal with very little rainfall. Those who have not finished plowing are finding the ground too dry for good work. The markets are increasing in size all the time, the night markets to start in Paterson May 10th. They are quite brisk with only a few things selling slow. Last week saw the first cutting of asparagus with the price from $5.50 to $6 for No. 1. Apple trees just coming into blossom, peach and pear in full bloom. Poultrymen about finished hatching.—N. D., May 10.

Potter County, Pa.—The weather is good and soil in excellent condition. Farmers are busy sowing lime and oats. Each year more farmers are using lime. Many farmers have been buying hay for weeks and the barns are nearly empty. National Forest Week was observed here by four demonstration planting meetings each held in a different section of the county by the farm agent and C. R. Anderson, extension farm woodlot forester. These showed best method of planting and the growth trees will make. Health week brought special health films to the theater and health plays to the schools. We are sorry to learn that no funds are available to continue the testing of dairy herds for bovine tuberculosis. Over ninety per cent of the farmers signed up for the test. Dairying is an important business in this county. Few reactors are found but we want disease-free cattle. The price of potatoes is a bit lower. Eggs, 27c; butter, 40c.—M. C. S., May 8.

Tioga County, Pa.—We had only two or three really warm days until May 1st. Since then it has been warmer but tonight the thermometer will fall very close to freezing. Rather dry now. Farmers are hurrying to catch up spring work. Many oats yet to sow. Very little other planting done. Later hatches of chickens reported much better than the early ones. Milch cows scarce and high. Beef cattle scarce, prices not very good. Eggs have averaged about 27c thru April, which is from 7c to 9c per dozen higher than during April a year ago. Veals, 6@11c, according to quality; bulls, 5c; hay, $15 in the barn; cow feed, $45@50 ton.—P. W. L., May 12.

Prices and Prospects

THE Philadelphia egg market has held steady with a fair demand. Receipts during week ending May 12 were liberal with 57,389 cases reported, of which number Pennsylvania furnished 5402.

Receipts of eggs at New York increased and the market weakened slightly. Reports from western points show that collections have been heavier. Offerings of nearby eggs have increased but the demand has been fair during the major part of the week. The production of Pacific Coast white eggs is larger than last year but the majority are going into storage there, and receipts at New York have been light.

Receipts of live poultry were moderate on the New York market thruout the week and prices showed but little variation. There was an excellent outlet for light fowl but in the absence of adequate supplies of these heavy fowl were more active. Fancy broilers were more active, while light supplies of White Leghorn fowl were in strong demand. Fresh killed poultry has been in heavier supply and prices declined. Toward the close, broilers were in heavier receipt and weaker.

The potato markets slumped sharply during the week ending May 12 and declines of 50c to $1.50 per hundred pounds were common. The heavy receipts and poor quality of the arrivals were depressing factors. The Philadelphia old potato market was practically demoralized on May 8 but steadied somewhat on Monday. Prices continued to decline and on May 12 Pennsylvania round whites reached the low point of $4.00 to $4.50 per 150 pound sack.

Stock Rather Spongy

Much of the stock arriving is badly sprouted and rather spongy. Despite the sharp declines prices are still three to four times those of a year ago. Many dealers believe that the pendulum will swing back again, in fact, the Chicago market had recovered somewhat by May 12th.

The peak of the movement of new potatoes from Florida has probably passed. There were 920 cars shipped during the week ending May 8 and about 800 were expected the following week and 500 the next, with most of the crop out of the way by May 25th. This would make the total of around 4000 cars from Florida compared with 5100 last year.

The movement from Louisiana has just begun and the output is expected to range from 1000 to 1500 cars. The movement from this state is expected to be over by June 5th. A large crop is anticipated in South Carolina with first shipments due this week.

Just about half as many new potatoes had been shipped up to May 8 as during the same period last year, there being 3300 and 6450 cars respectively.

Hay Prices Higher

Hay prices were forced higher at most markets during the week ending May 8 due to lighter receipts. The advance of pastures restricted country takings. Top grades were in best demand on account of the scarcity of desirable hay. Timothy ruled firm. Light receipts and small stocks on hand caused prices to rise at New York. Receipts at Pittsburgh were hardly equal to current needs and top grades were higher.

Grain prices dropped sharply during the week. Wheat prices were about 5c per bushel lower and corn prices were forced to the lowest point of the crop to date. The reduction in export demand and favorable weather conditions in hard and spring wheat areas were the factors of weakness in the wheat market. Corn future prices declined but cash grain was active. Prices for current offerings were only 1@2c per bushel below those of the previous week.

Ohio wools have been very quiet on the Boston wool market thruout the week ending May 11th. A limited quantity of ⅜-blood and also ¼-blood combings have moved at about 44c in the grease. Mill inquiry has been light on eastern-grown fleeces. Unfavorable weather has held back shearing in Ohio and so far purchases of new clip have not reached any large proportion. Reports from buyers in Michigan state that growers are very firm in their ideas of price at about 38c to 40c.—W. R. Whitacre.

Little Aaron Is Puzzled

(Continued from page 3)

mechanical helpers of today for the human helpers of yesterday. It takes courage.

The first cost seems prohibitive until we begin to reckon it in terms of what it would take to pay a human helper's wages in a lump sum for years in advance. And the upkeep? It is only fair to set against that the upkeep of the human helper,—board, room, heat, waste, sickness, vacations, etc. And the reliability? Mrs. Brubaker, along with other up-to-date housewives, is depending wholly,—and to her entire satisfaction,—on her electric range.

The Brubakers pay five cents per kwh for power and ten and one-half cents per kwh for light. There is a discount for cash, which makes a net amount of four and one-half cents for power and ten cents for light.

Following is the way that the cost of running electrical appliances is estimated:

Washing machine, 200 watts, 12 hours a month, makes 2400 watts, @ $.10 per kwh—$.24 per month.

Flat iron, 575 watts, 12 hours a month, makes 6900 watts @ $.10 per kwh—$.69 per month.

Vacuum cleaner, 160 watts, 5½ hours a month, makes 880 watts, @ $.10 per kwh—$.088 per month.

Toaster, 450 watts, 8 hours a month, makes 3600 watts, @ $.10 per kwh—$.36 per month.

Ironing machine, 3600 watts, 8 hours a month, makes 28,800 watts, @ $.045 per kwh—$1.30 per month.

Electric range, 500 watts, 24 hours a month, makes 120,000 watts, @ $.045 per kwh—$5.40 per month.

Refrigerator (¼ H. P.) 200 watts, 250 hours a month, makes 50,000 watts, @ $.045 per kwh—$2.25 per month.

By the time little Aaron runs the farm, electrical equipment will be the rule and not the exception. Perhaps visitors will flock then to look at a last surviving coal range or hand pump!

The ironing machine provides a bench for the worker while doing heavy ironing. Hand ironing, too, can be done without waste of effort.

Editors' Note.—This is the first of two articles on the electrification of Locust Lane Farm. The second, dealing with the use of electricity in the barns and fields, will appear in an early issue.

Feed Market Situation

FEED prices averaged practically steady during the week ending May 13th. Lake navigation was open and some lake and rail feed was arriving at eastern points. Demand was slack and was chiefly for small lots. Hay prices were irregular with southern orders slackening and feed grains were practically steady.

Wheat feeds were irregular but averaged slightly lower. Spot bran held practically steady at Minneapolis but heavier feeds were draggy and the market was dull at Kansas City where small lot buying was less active. Eastern traders have been bidding Kansas mills for new crop bran for summer shipment at around $20 but mills were generally unwilling to accept this price.

Linseed meal ruled slightly easier. Consumptive demand was light in Minneapolis territory but the limited spot offerings were still in brisk demand altho supplies for shipment the latter part of May were offered at a slight reduction.

Cottonseed Barely Steady

Cottonseed meal was barely steady. Export bids were slightly below a working basis and warehouse stocks were larger than a year ago, tho offerings continue small. Eastern markets were dull and slightly lower with a slack demand.

The corn feeds averaged steady. Gluten feed moved at unchanged quotations. Production of this feed was about normal in the Central West. Inquiry was quiet in the eastern markets at last week's advance. Hominy prices were practically unchanged in the East but prices ruled firm at Chicago.

Alfalfa meal ruled steady to firm. Trading was narrow but the small offerings were well absorbed. Buyers were generally awaiting the movement of new crop meal, which was expected to begin the latter part of June.—United States Bureau of Agricultural Economics.

A Conference in the Interest of Better Beef

ON APRIL 27 an important conference was held in Chicago in the interest of the "Better Beef" movement, which has been under discussion among beef producers for some time. It was a conference that should be of interest and value to eastern cattle feeders and breeders who have long felt the need for a better outlet for the better class of cattle that are fed every year, but are not fully appreciated when they reach the market. In many cases choice well-bred feeders have been put in the feed lot in the fall and finished into prime cattle only to be discounted or sold at a small premium over common cattle when put on the market in the spring.

The conference which was held was made up of groups representing the three leading beef breeds, the special committee of the International Livestock Exposition Association and the packers.

Mr. Alvin Sanders, editor of the Breeders Gazette, Chicago, who has taken an active lead in advocating the use of better beef during the past few years, presided at the meeting. He briefly reviewed the general beef situation calling attention to the wholly unsatisfactory position of prime well-finished animals on the leading markets of the country.

Demand Is Now Restricted

Reports from leading buyers revealed the fact that at present the outlet or demand for prime beef is restricted and does not allow for the general buying of the better class of cattle on the market at prices that are satisfactory to the producer. This situation is due to the fact that there has been no organized effort to push the sale of better beef and to educate the public to a better appreciation of "quality beef."

Wholesalers and retailers of beef have not been especially interested in expanding the market for better beef because they have been able to handle the cheaper grades on a wider margin and consequently make a larger profit.

The various interests represented discussed all phases of this important question and it was the unanimous opinion that the entire situation deserved careful study. Many opinions were expressed as to how the situation might be relieved but everyone felt that before a comprehensive program could be adopted it was necessary to carefully study all the factors to be considered in this connection. Representatives of the different interests at the conference felt that any movement which developed a greater outlet for better beef would be of value not only to the purebred interest, but to the corn grower and the consumer as well.

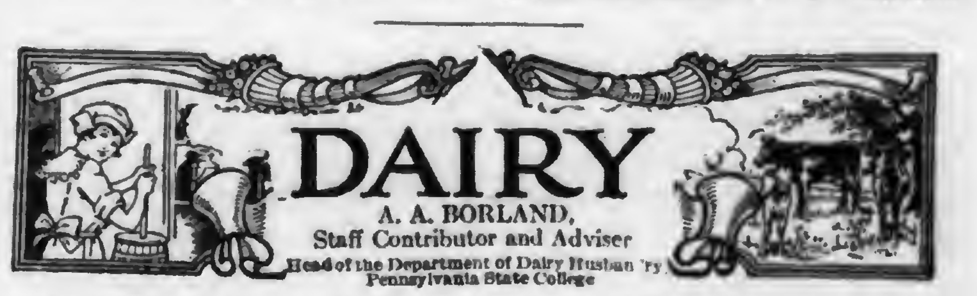
The following resolution was adopted with the feeling that another meeting should be called to perfect plans for carrying on the better beef campaign thruout the United States.

Resolution Adopted

Resolved, by the delegates in conference here assembled, That it is the sense of this meeting that steps be taken at once looking towards a survey of the situation as respects the production, grading and distribution of prime beef in all leading domestic markets, . . . and be it further

Resolved, That the chairman of this conference be and is hereby directed to appoint a committee of three members with authority to receive by subscription such funds as may be necessary for the prosecution of the survey referred to in the foregoing resolution. . . . Be it further

Resolved, That the chairman of this conference be and is hereby directed to appoint a committee to consist of five members, with instructions to formulate and submit to a meeting, to be called at the discretion of the chairman of this conference, a plan for the organization of a permanent central body created for the purpose of furthering the objects herein mentioned.—W. H. Tomhave.



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Cow Sucks Herself

Is there anything to keep a cow from sucking herself and other cows? We have tried the best weaners on the market. She takes her milk if standing or lying down. She even takes it in the stable if she is not tied very short.—C. M. G., Washington County, Md.

The most effective method of preventing a cow from sucking herself or others appears to be as follows: Put a bull ring in the cow's nose and hang a second ring from the first. This plan has been tried out with success by a number of dairymen.—A. A. Borland.

Testing Associations

THE Chester County Cow Testing Association, organized in 1910, is the oldest in Pennsylvania. Since then the number of testing associations in Pennsylvania has grown steadily.

During 1925, 14,797 different cows in forty-one associations were tested. This is nearly 3000 cows more than were included in the 1924 work. These cows averaged 7343 pounds of milk and 283 pounds of butterfat, an increase of thirty-four pounds of milk over the previous year of 1924.

The Cumberland Association had the highest average production with 9390 pounds of milk and 333.5 pounds of butterfat for the year while the Venango Association, with 438 cows, held the record for the largest number of cows tested.

The goal of 300 pounds of butterfat per cow was first reached by one association in 1920, while eight associations including 301 herds equaled this record in 1925.

Lewis A. Zimmerman, Carbon County, holds the highest herd average with 15,958 pounds of milk and 519.6 pounds of butterfat. This herd averaged twenty cows for the entire year. Eighteen herds averaged better than 400 pounds of butterfat during 1925 and seventeen cows produced more than 600 pounds of butterfat each.—A. L. B.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOG IS PARALYZED.—About two weeks ago my dog went out of doors one afternoon and when he came back he was walking very stiff in his hind quarters. Since then he has been growing steadily worse until now he can walk only with his front feet. Drags the back part of him across the floor. The small of his back seems very sore. He has very little appetite. I have used liniments and turpentine on him but nothing seems to do any good.—M. G. E., Barclay, Md. This paralysis may be due to an injury to the back bone which will not respond to treatment. You should take this dog to your veterinarian or the nearest canine specialist. This is an easy matter in the days of automobiles. If there is no response to local applications, then a special examination would be your only means of providing adequate treatment.

COW ABORTS.—I have a big Holstein cow which lost her calf this spring. Do you think she might have abortion germs for she was in heat the next day, but I did not breed her? Do you think it would be all right to breed her to my Holstein sire and at what stage should I breed her?—L. S., Jr., Millersburg, Pa. This case of abortion may be the result of injury but usually these cases are due to micro-organisms or germs. If she cleaned promptly and there is no discharge she could be bred at about the third heat period which, in this instance, would be about six weeks. It would be well to douche the sheath of the bull before and after service.

SWELLING ON SHOULDER.—There is a swelling on the shoulder of one of our horses. It is a little larger than a man's two fists. We first noticed it about the first of February. We would like to know if there is any cure for it.—R. M. K., Rutland, Pa. This swelling is probably due to a boil or abscess. If this swelling is near the top of the shoulder, it would look as tho a fistula was developing. As it will probably require opening, you had better consult your graduate veterinarian regarding the handling of this case.

PROBABLY RICKETS.—I have two pigs a little over two months old. They cannot walk when they get up, they fall over and do not eat very well. I have been feeding middlings and have been giving them corn and oats. Can you give me any advice as to what to do or what to give the pigs?—D. Z., Black Lick, Pa. These cases usually respond to tablespoonful doses of cod liver oil in the feed twice daily. Allow the pigs to be out in direct sunlight. Feed a mixture of 100 pounds corn, 10 pounds meat and bone tankage, 5 pounds oil meal and five pounds alfalfa meal. This furnishes a well balanced ration for growing hogs.

HORSE PANTS.—I bought a horse about fourteen years old. Works fine, does not sweat, just pants. The panting does not check him. Walks right up to plow or anything. Sometimes will pant for an hour after he stops working. Is their anything that I can give him that will make him sweat?—I. R. A., Califon, N. J. Some horses that do not sweat have shown marked improvement following two or three warm water baths in a week. The water should be as warm as can be comfortably stood by the animal. A good grade of soap may also be used. Massage the skin thoroly. The diet may be improved by daily additions of oil meal, frequent bran mashes, grain—largely oats—and good clean hay.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

RAISE CHICKENS! Buy day old chicks. We are now hatching 5,000 chicks weekly. All breeds. Low prices. Start today with purebred chicks from inspected farm flocks. They'll be broilers in two months—laying before winter. Live delivery guaranteed. Send no money. We ship C. O. D. Allegheny Valley Hatchery, Box A-2, East Liberty, Pa.

BABY CHICKS—Prices are for lots of 25, 50 and 100 chicks: Reds, $3.25, $6.00, $10.00; White Leghorns, $2.75, $5.00, $9.00; Rocks, $3.00, $5.50, $10.00; heavy mixed, $2.50, $4.50, $8.00; light mixed, $2.25, $4.00, $7.00. Free range. 100% delivery. Circular. W. A. Lauver, McAlisterville, Pennsylvania.

CUT PRICES on May chicks, R. I. Reds and Barred Rocks 13c; S. C. White Leghorns 11c; heavy mixed 10c; light mixed 8c by prepaid parcel post. Order from this adv. Penns Creek Hatchery, Selinsgrove, Pa.

MITCHELL'S BABY CHICKS from free range stock. White Leghorns, $10.00 per 100; Barred Rocks, $10.00; S. C. Reds, $12.00; Mixed, $9.00. Prepaid. 100% live. Order from ad, or circular free. Mitchell's Reliable Poultry Farm, Millerstown, Pa.

CHICKS—S. C. Buff Leghorns, Barred Rocks, White Rocks, Reds and mixed 9c and up. Chicks of good healthy parent stock. Good chicks. 100% live delivery guaranteed. Circular free. Jacob Niemond, McAlisterville, Pa., Box 6.

300,000 CHICKS FOR 1926—White Leghorn, Barred and White Rock, Rhode Island Red and White Wyandotte. They are bred, hatched, priced right. 100% live arrival guaranteed. Catalog free. L. R. Walck Hatchery, R. F. D. No. 3, Greencastle, Pa.

QUALITY CHICKS—State accredited, per 100: Leghorns, large assorted, $10; Rocks, Reds, Anconas, Orpingtons, Wyandottes, $12; Light Brahmas, $15; assorted, $8. 100% alive, postpaid. Catalog. Missouri Poultry Farms, Columbia, Mo.

MAMMOTH BRONZE turkey eggs $3.50 per 6; $6.50 per 12, prepaid, from 35 lb. toms, 16 to 20 lb. hens. Healthy flock roaming over 200 acres. Clover Lane Farm, Spring Grove, Pa.

PUREBRED MAY CHICKS—Barred Rocks, 13c; R. I. Reds, 13c; White Rocks, 15c; Black Giants, 20c; Wyckoff White Leghorns, 11c; Mixed, 10c; order from this adv. Monroe Hatchery, Selinsgrove, Pa.

CHICKS 8c up C. O. D., delivery guaranteed. Write for feeding system that raised 90-95% to maturity year after year. C. M. Lauver, Box 43, McAlisterville, Pa.

QUALITY CHICKS—10,000 weekly. White Leghorns, Barred Rocks, Buff Rocks, Reds, White Wyandottes, Heavy and Light Broilers 9c up. Plum Creek Poultry Farm, Sunbury, Pa.

PUREBRED CHICKS—The husky, hustling kind. White Leghorns, Barred Rocks, R. I. Reds, White Rocks, Light Brahmas. Free folder. Seicher's Pleasant View Farm, Bellefonte, Pa.

BABY CHICKS from heavy laying strains of Rocks and Reds 12c; Leghorns 10c; Jersey Giants 22c. Circular free. George Cullen, Elkview, Pa.

CHICKS—CHICKS—R. I. Reds, 12c; Barred Rocks, 12c; White Leghorns, 10c; Mixed Chicks, 8c. Guarantee live delivery. Pine Grove Hatchery, Richfield, Pa.

CHICKS, EGGS—From high production stock. White Leghorns, Barred Rocks, Reds and Jersey Black Giants. Write J. C. Fleming, Box 15, Mentcle, Pa.

CHICKS from heavy-laying strain. Barred Rocks, 9c; Mixed, 7c. 100% arrival guar. Circular free. R. J. Ehrisman, Box 50, McAlisterville, Pa.

CHICKS—S. C. W. Leghorns, 9c; Mixed, 7c. Special prices on large lots. 100% guarantee. Circular. Meadow View Poultry Farm, McAlisterville, Pa.

BIG husky mixed chicks, hatched right and ready to make you money at $11.00 per 100 delivered. J. Elmer Long, Palmyra, Pa.

BABY CHICKS—June prices. Barred and White Rocks, W. Leghorns, Reds, Wyandottes, Buff Orps., 11c. G. C. Rhoades, Reedsville, Pa.

BABY CHICKS and eggs. Superior Ringlet, Barred Rocks, Rose Comb Reds, White Leghorns. Catalog. Wyndham's Ideal Poultry Yards, Tiffin, Ohio.

PEAFOWL, Pheasants, Bantams, Pigeons, Guineas, Wild Geese, Ducks, Breeding Stock, Eggs. Free circular. John Hass, Bettendorf, Iowa.

McCULLOUGH'S "EGGBRED" White Rocks—also—Black Leghorns—Eggs 15—$3.00. Plummer McCullough, Mercer, Pa.

PEKIN DUCK EGGS $1.25 per 11. Albert H. Graybill, Richfield, Pa.

FARM LANDS

ILLINOIS THE LAND OF OPPORTUNITY—Henderson County is one of the best located counties in the State of Illinois. The Santa Fe and C. B. & Q. Railroads, which connect Chicago with the Pacific Coast, both pass through Henderson County. The Illinois Power & Light can furnish unlimited power for industry. You can buy five acres of Henderson County's rich soil for the price of a town lot. We are bounded on the west by the Mississippi River, and our soil is ideal for growing anything. Whether you wish to farm, be a merchant, or start industry, Henderson County is the place. E. G. Lewis, Media, Ill.

70 ACRES and 12-year orchard. 1200 apple trees only $3200. Splendid fruit soil, trees in bearing should quickly pay for everything; on improved road, near schools and churches, mail delivered, 65 acres productive fields, springs and stream, wire-fenced pasture; apple orchard, pears, plums, cherries, peaches; desirable 6-room house, telephone, good 40x50 ft. basement barn, hen houses. Owner retiring makes a bargain at $3200 for quick sale, one-third needed. Details pg. 18 big Illus. Spring Catalog. Free. Strout Agency, 1422-BE Land Title Bldg., Phila., Pa.

FARM BARGAINS—"Outlook for farming was never better." $25.00 per acre will buy good, level farm land, located in Pennsylvania, Maryland, and Virginia; near excellent markets and big industrial centers; equipped with modern buildings; near concrete roads, schools, and churches; $500-$1500 cash needed; balance long-term mortgage, 5½% interest. Size of farm—75-100 acres; adapted to general farming and live stock. First to come will get these bargains. Write for descriptions to B. H. Engle, St. Paul and 24th Sts., Baltimore, Maryland.

PLANTS

VEGETABLE PLANTS—25 million now ready. Fine field grown stocks. Varieties, cabbage, Copenhagen Market, Succession, Flat Dutch, Wakefield and Danish Ballhead. 300, $1; 500, $1.25; 1,000, $2.25 prepaid. Express collect 10,000, $10. Golden Acre, 1,000, $3 prepaid; express collect 10,000, $20. Tomato plants, leading varieties, 300, $1.50; 500, $2; 1,000, $3 prepaid. Express collect, 10,000, $15. Pepper plants, 75c, 100; 500, $3; 1,000, $5 postpaid. Express collect 10,000, $30. Cauliflower plants, 500, $3, 1,000, $5 prepaid. Express collect, 10,000, $40. Transplanted tomato and pepper plants, 100, $1.25, 500, $4; 1,000, $6.50 prepaid. Express collect 10,000, $50. Prompt shipments, entire satisfaction absolutely guaranteed or money refunded. Shipping capacity half million per day. J. P. Councill Company, Franklin, Va.

CABBAGE PLANTS—Fine outdoor grown, stocky and hardy. Varieties: Copenhagen Market, Wakefield, Succession, Ballhead and Flat Dutch. 300, 75c; 500, $1.00; 1,000, $1.75 mailed prepaid. Expressed collect 10,000, $10.00; 50,000, $45.00. Golden Acre $3.00 per M; 10,000, $25.00 cash. Tomato plants, 500, $1.50; 1,000, $2.50 postpaid. Express collect 10,000, $12.50. Prompt shipments, delivered anywhere and guaranteed. Price list free on cauliflower, pepper, sweet potato, etc. Old Dominion Plant Co., Franklin, Va.

PLANTS—MILLIONS—Cabbage; Wakefields, Copenhagen, Ballhead, Succession, Flat Dutch. 500—$1.25; 1000—$2.25 postpaid. 10,000—$12.50 expressed. Tomato, Chalks Jewel, Bonny Best, Greater Baltimore, Stone. 500—$1.75; 1000—$3.00 postpaid. 10,000—$20 expressed. Cauliflower and pepper: 500—$2.50; 1000—$4.50 prepaid. Special prices on all plants in large quantities. Cash with order. Oldest wholesale growers in Virginia. Prompt shipments. Satisfaction guaranteed. Tidewater Plant Co., Box 538, Franklin, Va.

FROST PROOF cabbage and tomato plants. Varieties: Charleston and Jersey Wakefields, Copenhagen Market, Succession and Flat Dutch. Tomato, Bonnie Best, Earliana, Livingston Globe and Greater Baltimore. Prices, parcel post paid, 500—$1.50; 1,000—$2.50; 5,000 and over, express collect, $1.25 per 1000. We guarantee to ship promptly a good size plant that will please you. Tifton Potato Co., Inc., Tifton, Ga.

MILLIONS FIELD GROWN cabbage and tomato plants. Cabbage, Copenhagen, Flat Dutch, Succession, Danish Ballhead, Wakefield. Tomato, Greater Baltimore, Stone, Matchless, 300—$1.00; 500—$1.25; 1000—$2.00 postpaid. 10,000—$12.50, express. Sweet potato, Ruby King pepper, 300—$1.50; 500—$2.00, 1,000—$3.50, postpaid. If you want good plants and a square deal order from Ideal Plant Company, Franklin, Va.

TEN MILLION good field grown plants. Cabbage Wakefields, Copenhagen, Ballhead, Succession, Flat Dutch. 500—$1.25; 1000—$2.25 prepaid. Tomato Chalks Jewel, Bonny Best, Greater Baltimore, Stone 300—$1.25; 500—$2.00; 1000—$3.00 prepaid. 10,000 $20 expressed. Cauliflower and pepper: 500—$3.00, 1000—$5 prepaid. Order now for good plants. Prompt shipments. Satisfaction guaranteed. R. J. Councill, Franklin, Va.

WHOLESALE and retail frost proof cabbage, and early sweet potato plants in season. Varieties cabbage plants: Early Jersey Wakefield, Charleston Wakefield, Succession, Flat Dutch, Copenhagen Market. Tomato, lettuce, onion, beet, kale, Brussels sprouts, celery, pepper and Eggplants. Sweet potato plants: Nancy Hall and Porto Rico. O. F. Jamison, Summerville, S. C.

PLANTS—Bonny Best; and improved Baltimore tomato, early and heaviest bearer known. Choice plants damp moss packed, also Bermuda onion 200, 50c, 500; $1.00, 1,000; $1.75, 2000; $3.00. Lead $1.25, 2000; $2.00. Prompt shipment. Good condition delivery guaranteed. Progress Plant Co., Ashburn, Georgia.

CABBAGE PLANTS—Millions fine "Frost-proof" outdoor grown cabbage plants, Copenhagen, Succession, Flat Dutch, Wakefield, Ballhead: 500, $1.25; 1,000, $2.25; mailed prepaid. Express collect 10,000 $10; 50,000, $45. Tomato plants, 500, $2; 1000, $3.50 prepaid. Express collect 10,000, $12.50 cash. Shipped safely anywhere and guaranteed. Wholesale Plant Company, Thomasville, Ga., and Martin's Point, S. C.

CABBAGE PLANTS—5 acres. Ready June 1st. Copenhagen Market, Wakefields, Ballhead, Flat Dutch. Prepaid. 100, 45c; 300, $1.00; 500, $1.25, 1000, $2.25. Express, 5,000, $7.50. Snowball Cauliflower, 100, 70c; 500, $2.25; 1000, $4.00. Prepaid Moss packed. Critically assorted. Guaranteed. Buy near home grown. W. J. Myers, R. 2, Massillon, Ohio.

PLANTS—Transplanted plants, all varieties postpaid. Beet, cabbage, celery, cauliflower, sweet potato, pepper, tomato, 3 doz. 40c; 100, $1.00; 500, $4.00. pansies, Sweet Williams, Snapdragons, Egg Plants, dozen, 30c; 100, $2.75. Satisfactory delivery guaranteed. Catalog. Rohrer's Plant Farms, Smoketown, Pa.

MILLIONS hardy field grown cabbage and tomato plants, dozen varieties, 500—$1.00; 1000—$1.50; prepaid. 10,000 expressed, $10.00. Cauliflower 35c per 100; $3.50 per 1000. Prepaid. Well packed. Satisfaction guaranteed. Price list late plants free. J. T. Councill & Sons, Franklin, Va.

SWEET POTATO PLANTS—Pure Nancy Hall, Southern Queen, Portorico. Grown from nice hand picked, chemically-treated seed, free from disease. Postpaid. 500 for $2; 1000 for $3.50. Expressed, $3.25 per 1000. Jesse Russell, Route 2, Bowling Green, Ky.

GRIMM ALFALFA SEED, $19.88 bushel. Fancy alfalfa, $12.50. June red clover, $19.88. Red clover mixed with alsike and timothy 13 1-3% each), $8 bushel. Cobbler seed Irish potatoes, $10.75 for 150 pounds certified. Z. T. Nichols & Sons, Waynesburg, Pa.

SET OUR Frostproof cabbage plants, 500—$1.50; 1000—$2.25 prepaid. Prices on tomato, cauliflower, pepper and sweet potato plants on request. Plants shipped safely anywhere. Tidewater Plant Co., Franklin, Va.

CABBAGE AND TOMATO PLANTS—Standard varieties one dollar per thousand. Cauliflower plants four dollars per thousand. Charges collect. Cash with order. Clifford A. Cutchins, Franklin, Va.

How it paid this farmer to clean wheat seeds

Uncleaned seeds produced 11 bushels of wheat per acre.

According to a prominent farm paper it cost this middle-western farmer 32 cents per acre to clean wheat seeds at planting time. But the cleaned seeds produced 18 bushels of wheat per acre, as against an 11 bushel yield for uncleaned seeds which were planted in another part of the same field. And the grain from the cleaned seeds brought 15 cents more per bushel.

How it pays any farmer to use Mobiloil

Cleaned seeds produced 18 bushels of wheat per acre.

Mobiloil, like cleaned wheat seeds, costs a trifle more than common oil. But once Mobiloil goes to work in your engines, you will find that in many ways it pays handsome dividends on the few cents more you pay for it.

For one thing, Mobiloil frequently reduces oil consumption in cars and trucks, from 10% to 50%. And in tractors a crankcase full of Mobiloil often gives efficient lubrication for twice as long as other oils.

Nor is that all. Mobiloil leaves surprisingly little carbon. It also provides the best protection against undue wear and unexpected breakdowns. *By the year and by the mile, Mobiloil is actually the cheapest oil to use.*

Make the CHART your guide

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil are indicated by the letters shown below. "Arc" means Gargoyle Mobiloil Arctic.

If your car is not listed here, see the complete Mobiloil Chart at your dealer's.

Why oil must fit

Your first step toward lubricating economy is to buy oil of high quality. Your next and equally important step is to buy oil of correct body and character. An oil that fits your tractor perfectly, may cost you a burned-out bearing, if used in your car or truck.

But it is easy to buy the right oil for each of your engines when you go to the Mobiloil dealer. He has the Mobiloil Chart to guide him. This Chart is prepared only after painstaking study of *all* automotive engines by the Mobiloil Board of 42 Engineers. And 609 manufacturers of automobiles and other automotive equipment approve this Chart. See the nearest Mobiloil dealer today. Put scientifically correct lubrication to work in your car, your farm truck and your farm tractor. It will save you both money and trouble.

Vacuum Oil Company, branches in principal cities. Address: New York, Chicago, Kansas City or Minneapolis.

Buick *makes*–
a Dollar Last Longer

Buick design protects your money both when you buy, and as you drive.

Great volume enables Buick to offer the finest of fine-car construction at moderate cost. Cars built to similar standards of quality must be sold at higher prices, when built in smaller quantities.

Better design means extra dependability and lower operating cost. Only Buick has the "Sealed Chassis", with its "Triple-Sealed" engine. Every operating part is enclosed in an iron or steel housing to keep out dirt, water and resulting wear. Every point of entry for dirt and grit *sealed!*

The Buick engine is full-pressure lubricated, with a constant film of oil at *every* point where metal would rub metal. The Buick clutch is a *ten-plate,* multiple-disc type, instead of the usual single plate. Buick has Controllable-Beam Headlights with steering-wheel control, to make night driving a pleasure. Buick *mechanical* 4-wheel brakes add safety, and save tire wear.

All these fine features of Buick design add expense to Buick manufacture, but they save expense for you.

To get more and better transportation at lower cost—to make your dollars go farther and last longer—buy a Buick!

Simons Doesn't Gamble in Potatoes

He Uses Modern Methods of Production That Remove Most of the Uncertainties

By R. E. WAKELEY

THE average potato grower in Pennsylvania can expect to lose money on his 1926 crop of spuds. His seed, at present prices, will cost from $60.00 to $80.00 for one acre. This, of course, is more than double the ordinary cost in an average year and is the biggest factor in the cost of potatoes. Other relatively fixed charges and operating costs will bring the total cost of an average acre of potatoes in 1926 up to about $150.00.

Now suppose the grower gets an average yield of from 100 to 125 bushels per acre. Where, then, are the profits? Potatoes would have to bring close to $1.50 per bushel just to pay expenses. Growers cannot be sure of such a price in 1926 by any means. Hence, the certainty of loss on the part of many of our potato growers is evident.

Can our men avoid this possibility of loss on their 1926 crop? Experience of Wayne County potato growers for the past five years offers proof that they can. Let's consider the case of Dick Simons. He has practically removed chance and uncertainty as a factor in his potato crops. I feel free to assert that he will make money on his potato crop this year. The accompanying table gives the evidence.

Five-year results with potatoes:—

	Yield, Bushels per acre.	
	Sprayed	Unsprayed.
1921	299	251
1922	394	276
1923	409	341
1924	405	303
1925	404	339
Average	380	302

Two things stand out in this table of Simons' results. In the first place there is an average increase in yield of seventy-eight bushels per acre, due to spraying. This one single factor is sufficient to turn a source of loss into possible profit in 1926.

The second and most remarkable point is that, during the four years from 1922 to 1925, Dick has had an extreme variation in yield of only fifteen bushels per acre. This looks like stabilizing his potato industry and that is what he has done.

Incidentally it also appears that Dick has been a successful candidate for the Pennsylvania 400 Bushel Potato Club for the last three years. He says he is going to make it five years straight.

The year 1921 needs a little explanation. This was the first year Dick sprayed and he planted local grown seed, hence the lower yield. Each year since that first one Dick has planted only the best disease free seed which he secured thru his county farm bureau organization. He credits much of his success to good seed.

Other Factors That Made Him Successful

Let's consider a minute some of the other factors in Dick's success. His soil is a valusia type, stony, clay loam, not an easy soil to grow potatoes on. He always plows under a good sod for potatoes but during the past five years it has been a timothy sod. Next year he is going to put them on clover sod. He plows the ground fall and spring and harrows until the weeds and the hired man are both tuckered out.

A light coat of stable manure is applied on the sod the summer previous and plowed under. One thousand pounds of 4-10-4 fertilizer is harrowed in and an additional 1000 pounds per acre is put in the row, part in the furrow and part on top. This year he is going to use some 2-12-4 because of the clover sod.

At the left, potatoes from a sprayed row on the farm of Cross Brothers, Honesdale. On the right, those produced on an unsprayed row.

The potatoes are harrowed twice before they come up and are covered and harrowed again as they come thru the ground. Then the weeder is used and he follows thru the season with generous cultivation as needed. Dick killed quack-grass two different years in his potato fields by this treatment.

Dick's experience does not stand alone tho he is known as the potato king of Wayne County. In 1921 results from six farms showed 257 bushels per acre from the sprayed and 195 bushels per acre from potatoes in the same fields of the same variety, but not sprayed.

In 1922 the average for eight farms in Wayne County was 212 bushels for the sprayed and 106½ for the unsprayed. Notice again that there is a greater variation in the unsprayed than in the sprayed.

Cross Brothers, near Honesdale, planted potatoes on an old shaly loam cow pasture in 1921. Where they sprayed the result was 251 bushels to the acre. Where they didn't they got 106 bushels of potatoes per acre. No fertilizer was used.

Good Practices Pay

Examples need not be piled up endlessly. Our fellows are convinced that good practices pay in the potato field. The thing they are going to do this year is intensify. Next year's acreage will be a measure of the intelligence of potato growers and they will not increase the acreage greatly.

They realize that a largely increased acreage this season may mean low prices next fall. A lot of farmers who usually grow a few are not going to plant any this year. They plan to buy from the fellows who can grow them right.

The commercial growers will depend more and more upon the stabilizing factors which are making potatoes a safe money crop in Pennsylvania. They feel that stabilized potato production depends upon good culture, disease-free seed and careful, thoro spraying; and the greatest of these is spraying.

Eastern potato growers are being put within reach of more and better markets every year as the use of motor trucks increases and our good roads system is extended. The best potato markets of the country are but a few hours away from every farm in the Middle Atlantic States.

Livestock Worse Than Forest Fires

Farm Animals Do Immense Damage to Young Trees in the Woodlot

By C. R. ANDERSON
Pennsylvania State College

"FARM animals cause more damage to farm woodlots in Pennsylvania than forest fires." Sounds like a strong statement, doesn't it? It is, but we believe it to be true. The amount of damage done by them is very large, so large that one of the major steps woodland owners must take to build up their depleted woodlots is to prevent all grazing.

Where does the damage lie? Cows, horses and sheep eat the young trees. Turned into a newly cut over piece of land, they prevent its coming up to new trees entirely, or they make it "patchy" by eating heavily here and there thru it, or they change the character of the next crop greatly by eating young trees of some species and leaving young trees of other species altogether. The open character of many of our woodlots testifies to their activities.

Not only do they eat or cripple many of the young trees, but they reduce the stand to such a point that those trees which remain are not sufficiently crowded to prune themselves well. The result is a lower grade product of the tree, which may mean a very heavy loss.

The ground conditions in heavily grazed woodlots are not such as to make good growth of the trees possible. The soil is often hard, frequently bare, grass-covered when it should be protected and enriched by slowly decomposing layers of leaves and twigs. On steep slopes it is constantly washed down to lower levels.

Very many of us fail to understand and appreciate the part played by this material on the floor of the forest. Remove the brush, and away go the leaves. Remove the leaves, and we get the evil effects which we wish to avoid. Restore the short growth, young trees or shrubs, and the leaves remain on the ground. When the leaves remain on the ground, conditions improve, and growth improves. It is as logical as A-B-C, even if not quite so plain to us.

Only One Way to Prevent Loss

There is only one way that we can avoid serious loss from grazing the woodlot. That one way is to shut out the animals entirely.

The farmer who has been running cattle in wooded pasture should first calculate the pasturage area needed, assuming that the land be made to furnish real pasture. He then should examine his farm, locating the best young timber land and the areas easiest to set aside as pasture. His next step is to build some fence. The next, and last, is to keep the cows and sheep on the pasture side of the fence and not allow them the run of the woods.

Vol. 93, No. 22 Phila., Pa., May 29, 1926 Whole No. 1515

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Friendship is the only cement that will ever hold the world together.—Woodrow Wilson

Mrs. Arthur Capper

THOSE who have never been privileged to know Arthur Capper can hardly realize how sincerely his friends and acquaintances mourn with him the loss of his wife who died recently in a Baltimore hospital. Senator Capper is held in such high regard by everyone connected with the Lawrence Publishing Company, of which he is president, that his sorrow is felt very keenly, even by those who never met Mrs. Capper.

Florence Crawford Capper came from a line of distinguished men and women who have played an important part in the making of American history since before the Revolutionary War. She was the daughter of a governor of Kansas and in 1892 she was married to Mr. Capper, then a struggling young publisher, who later served two terms as governor and is now United States Senator from Kansas. Mrs. Capper was an accomplished musician and she published several songs of her own composition. Her skill as a harpist was a source of great pleasure to her relatives and intimate friends. Altho she took no active part in public affairs, she was keenly interested in her husband's work and was his able partner until her death.

Wheat for Gozo and Tobago

IT MIGHT take some of us quite a little time to find Madeira, Gozo, Chosen or Tobago on the map, nevertheless, the chances are that some of the wheat we grew in that field out back of the barn went into flour that was consumed in those countries, and others with names equally strange. The United States Department of Commerce names over seventy countries to which American flour was exported during March.

What a variety of pictures that list brings to mind! There are Malta and Cyprus, the very places we read about in the Bible; there is Nicaragua, where some people thought the ship canal should have been built, instead of across Panama; there is British Malaya, where fish climb trees and birds sleep hanging head down; there is Hongkong, which two of our much-traveled friends consider the ideal place to live; there are dozens of other interesting and remote countries we can never hope to see, that buy the flour grown on our farms.

If we never look beyond the horizon, plowing and seeding and harvesting may seem laborious and monotonous tasks; but there is romance in everything we do on the farm if we only stop to think of it.

Man versus the Insects

NOT long ago there appeared a magazine article by a writer who is thoroly convinced that man eventually will be driven off the face of the earth by his insect enemies. The author painted a gloomy picture, and he had gathered together enough facts about insect species which seem to be getting the better of the human race to make it seem real.

When we stop to count up the number of new insects that have gotten a foothold on farms in the eastern part of the United States within the last few years, it is easy to see how the magazine writer developed so pessimistic a frame of mind. But if he had looked for them he would have found several things to mitigate his worries.

The bugs that bite and bore and suck the life-juice of our food plants are bringing about great changes in our farming operations, but not all of those changes are for the worse. The back yard garden may give way to the commercial truck farm whose owner can afford the equipment needed to control the pests. The move in that direction already is quite noticeable in the fruit growing industry. Large orchards now supply the needs of people who formerly grew their peaches and apples on a few trees around the house. But in spite of the change there is little evidence of a prospective fruit shortage.

The insects aren't likely to wipe out the human race. But they may lead to the extinction of the so-called general farmer, and leave in his place a race of agricultural specialists.

Want to Forget It

OUR Washington correspondent writes, apropos of the fight in Washington over the Haugen bill, the passage of which is demanded by Corn Belt farm leaders: "The agitation for agricultural legislation was started by farmer-minded leaders who felt a real need for government aid to farmers, but the movement has degenerated into a political mess which Congress, the farm organization leaders and all others concerned would be glad to forget."

If the farmer-minded Corn Belt leaders had asked Congress for legislation that would enable farmers of the Middle West to work out their own salvation, they probably would have gotten some satisfaction. Instead, they led many of the law-makers to believe they were demanding a subsidy or a price-fixing scheme, and Congress balked. There is little chance now that any farm relief legislation will be passed before the present session closes.

Eight Unnecessary Fires

IF YOU make a list of the last ten fires that have destroyed farm houses and barns in your neighborhood you will be close to the truth if you assume that eight of those fires might easily have been prevented.

If men stopped carrying matches in their hatbands, or in pockets from which they are easily spilled and lost in hay or straw without ever being missed, there would be fewer fires. If people formed the habit of using nothing but safety matches there would be still fewer. Hundreds of barns are struck by lightning every summer, but we never heard of any damage being done by lightning to buildings protected by properly installed lightning rods. There are dozens of kinds of roofing material on the market that cannot be set on fire by sparks and flying embers. Defective flues can be made safe; gasoline can be handled with care; lanterns can be used with caution; most men can be persuaded that it isn't safe to smoke in the barn.

Those are the causes of most farm fires. The ways of preventing them are so cheap and simple that we marvel to see people continue to inflict a dangerous fire hazard upon themselves. Yet farm fire losses, for the country as a whole, are increasing.

Pennsylvania Voted Dry

IT APPEARS that many people in these United States are making the error of thinking that Pennsylvania is overwhelmingly wet, simply because the anti-prohibition candidate won the Republican nomination for the United States senatorship in Tuesday's election.

The fact is, Pennsylvania voted dry. There were three candidates for the Republican senatorial nomination, and two of them were against the repeal of the Eighteenth Amendment. The third, running on a light wine and beer platform, won the nomination. However, if prohibition was the real issue, as the wets would have us believe, then the drys have it, because more people voted for the two dry candidates than for the avowed wet. The latter won the nomination only because the dry vote was divided.

Washington Letter

LITTLE HOPE FOR HAUGEN BILL.—The proposed farm relief legislation has been before the House most of the time for nearly a month. Nearly a week was consumed in discussion of the Haugen agricultural price stabilization bill, after which discussion of amendments ran on intermittently for many days.

Early in the debate proponents of the Haugen bill saw there was no chance of its passing in the form that it was reported out by the House Agriculture Committee. They agreed to a reduction of the price stabilization appropriation from $375,000,000 to $175,000,000; to an immediate imposition of an equalization fee on sales of basic farm products to furnish funds for handling the surplus; to the elimination of the embargo provision and other features. But even in its emasculated form it failed to gain any appreciable strength.

COMPROMISE MAY FAIL.—An effort was later made by the proponents of the Tincher-Capper and Aswell-Curtis bills to unite on a compromise, attaching to the Aswell bill a provision for federal loans to cooperatives, similar to that provided in the Tincher bill.

Chances for any so-called farm relief legislation to get thru the House and Senate and receive the President's signature this session are exceedingly slim.

MISSED THEIR ONE CHANCE.—The farm relief legislation campaign has been badly led and unwisely managed. At one time early in the session the supporters of the Dickinson bill and the administration were close together on a compromise measure that could have been passed and it would have been a long start toward accomplishing the ends aimed at in the later Haugen bill.

NO ACTION ON MUSCLE SHOALS.—There is little chance for action on Muscle Shoals this session. It is not likely that the House will act on the bill to accept the military affairs committee report recommending leasing the power and nitrate fixation plants to the southern power interests.

No one seems to want action on Muscle Shoals at this time. Farm representatives are not anxious, because they know that acceptance of the majority report would mean the end of the matter as a cheap fertilizer proposition. And the power interests are now getting the power at Muscle Shoals for less than they would have to pay under the lease as proposed in their bid for the plants.

DECREASE IN TENANCY IN PENNA.—There was only a slight increase in tenant farming in the United States from 1920 to 1925. The percentage of tenant farms was 38.1 in 1920 and 38.6 in 1925. A considerable increase in tenancy was found in the Corn Belt and cotton states, while in Ohio, Pennsylvania and other eastern states an equally marked decline in tenant farming was found. It is also shown that the total farm population shrank from 31,000,000 to around 29,000,000 during the five years.—E. E. Reynolds.

Harrisburg Letter

ALL SET FOR BEETLE AND BORER.—State Plant Industry Bureau authorities have completed their preliminary arrangements for resuming the campaigns against the Japanese beetle and the European corn borer, the two imported pests which have caused more damage to Pennsylvania crops the last two years than most of the domestic nuisances. The beetle quarantine is now in effect, but the rigid enforcement will not start until June 15, when the bug becomes most troublesome. Meanwhile plans for thoro inspection of produce at farms and the establishment of the road patrol will be worked out. Visits of state agricultural authorities to the northwestern counties, where the corn borer quarantine is in effect, have shown the fields to be well cleared of stalks and an effort made by the great majority of the farmers to burn up all remainders of the corn crop.

WEATHER HITS ROADS.—Altho the number of men engaged in road construction and maintenance is probably larger than it has been in years at this season, work has met with considerable difficulty in portions of the state owing to lack of rain and the dryness of soil. In grading work rapid progress has been made, but the concrete laying is only fairly getting under way.

HUGE ORCHARD VALUES.—A detailed report made by the statistical bureau of the State Department of Agriculture shows the orchard crops of Pennsylvania to be worth many millions. There has been an actual decrease in the number of apple trees in the northwestern section. Adams County is shown to be the leading apple county now with 443,413 trees producing 885,580 bushels last year, Franklin being next with 443,650 bushels followed by Luzerne, York, Bedford, Cumberland, Lackawanna, Westmoreland, Berks and Lancaster in the order named. The total production is given as 6,970,000 bushels for the state, these ten counties yielding 3,151,000.

DISCUSS SCHOOL LAWS.—Preliminary discussions of proposals for changes of the laws for distribution of the state school appropriation have resulted in plans for a series of meetings during the fall at which the situation will be gone over in detail and committees named to study recommendations. A movement for more money for the small districts having scant taxation ability and where better buildings are essential is under headway.

TESTING RESUMED.—Tests of herds for tuberculosis have been resumed in full program by the field force of the State Bureau of Animal Industry since the federal indemnity money has been received. This week the inspectors will work in Chester, Lancaster and other southeastern counties and it is planned to keep going all summer.—Hamilton, Harrisburg.

New Jersey Letter

TRACTORS AT FARM COLLEGE.—The New Jersey Agricultural College has concluded arrangements to schedule an intensive series of tractor demonstrations on Field Day at the college farms, June 16th. The usual exhibits and demonstrations of large tractors will be made, while the exhibits in the small garden tractor class will probably be larger than any yet held at the college farms.

BANKERS URGE DIVERSIFICATION.—The interest of bankers in Gloucester County's cucumber and pepper sections promises to result in greater diversification of crops by the local growers. At a recent meeting of the county agent and extension service men, Newfield bankers sought ways and means to bring a pickling factory to that section. A tentative program was also mapped out to advise local growers on the economic necessity of producing other vegetables and fruits.

MONMOUTH DAIRY ASSOCIATION.—A county dairy association backed by leading producers has been organized in Monmouth County to encourage cow testing, tuberculosis eradication, more careful breeding and active support of junior dairy work. Membership in the new organization is on the basis of $1 for each member with less than ten cows, and $2 per member for those owning a herd of ten or more. Membership work is now under way to make the organization as large and influential as possible. Regular meetings will be held, including a summer tour.

GROWERS FORM SPRAY RING.—Several growers in the vicinity of Marlton in Camden County will meet the problem of equipment and time in spraying potatoes this year by the operation of a potato spray ring, with an experienced man in charge. The new group is formed similar to one operating in Cumberland County last year where growers at a cost of $12 per acre found that proper spraying gave them an average increase in yield of 43.6 bushels per acre.—B.

New York Letter

MILK INVESTIGATION.—The New York City Board of Health is continuing its investigation into milk graft in that city with an accompanying inquiry into the "bootlegging" of milk, or sales of milk that comes from foreign parts and does not meet the board's health regulations. It is significant that when it is being heralded abroad that the milk produced in New York state and neighboring areas is the best in the world, that the farmers' organizations are taking steps to improve it wherever possible; also that this investigation has resulted in barring two firms from continuing in the business. One of the firms was charged with violations two years ago but allowed to continue in the business. Later developments indicate that another concern had been selling 100 to 300 cans of cream a day from unapproved sources and testing from seven to twenty-five per cent too low in butterfat. Much of the bad milk and cream, it is charged, was sold to city institutions, such as hospitals and welfare institutions for children, the aged and infirm. The present health commissioner, Dr. Harris, responsible for the present cleaning up, has ventured the opinion that many of the city's typhoid cases have been caused by watered milk. Some fifty other firms are said to be doing business without permits and these are being sought out.

BIG YEAR FOR COUNTY AGENTS.—The farm bureau is taking a big stride in progress this year. They now have 30,000 members and all the associations are now self supporting. There is a general feeling of reliance on the information given which is always authentic and accurate.

SHEEP PROBLEM HELPED.—Tompkins County is rapidly lessening its difficulties in sheep raising. The special deputy hired by the board of supervisors had, on May 1, despatched seventeen dogs known to be killers—and he was still busy at similar work in the interests of sheep owners.—M. G. F.

HILLPOT QUALITY CHICKS

You can now buy Hillpot Quality Chicks at the price of ordinary chicks. I am offering these well-bred, record-laying stock at these prices as an inducement to become acquainted with Hillpot Quality Chicks. I confidently feel that you will be amply repaid for your investment. Looking for your order by return mail:

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

WE ARE trying out some varieties of peas and sweet corn which we never grew before. The new peas are the Marchioness, Little Marvel, and the Laxitonia. These varieties are of a dwarf nature and the quality is good. Pea vines which grow thirty to forty inches in height require support to produce well and it does not pay to provide brush or chicken wire to grow peas for market. It is true that all the very best varieties are of large growth, but we do not attempt to grow them in large quantities and the lesser kinds will furnish our trade with a very satisfactory product.

✦ ✦ ✦

IN ADDITION to the stand-by, Golden Bantam, we planted two earlier kinds of sweet corn,—the Early Malcom and the Vanguard. It is claimed that under favorable conditions these varieties will produce ears for the table in fifty-five and sixty-five days, respectively. All these are small-eared varieties and are limited to special trade, since the general city market trade demands large ears. If city consumers of sweet corn could get it fresh from the stalk and were wise enough to choose corn of quality instead of size of ears the market for sweet corn would double over night. But sweet corn loses about fifty per cent of its sweetness within twenty-four hours after it is pulled, and since a great deal of the market corn does not reach the table until it is forty-eight or more hours old, it is little wonder that so many people cannot tell the difference between good sweet corn and common field corn when they eat it.

✦ ✦ ✦

PRACTICALLY every kind of vegetable loses quality in about the same degree and as rapidly as sweet corn. People are learning this slowly and it is for this reason that roadside markets are becoming popular. Consumers who once buy good, freshly-gathered vegetables at a reputable stand, and cook them for dinner that evening, have an object lesson in quality which they do not forget, and which brings trade to the producer, providing he does an honest business and sells at a fair price.

✦ ✦ ✦

AFTER three weeks without rain we had nearly an inch fall on the sixteenth. It was a mighty welcome visitor. Besides furnishing moisture a good rain settles the soil about seeds and roots in a way that nothing else does. While it will doubtless start the heretofore dormant weeds also, man's efforts at crop production are vain unless sufficient rain falls at the right time.

✦ ✦ ✦

A PLAINTIVE note from a woman farmer asks me point blank this question: "How is it that you always seem so cheerful in your Neshaminy Garden notes? Don't you ever have periods of discouragement and don't you ever feel blue?" Yes, indeed, there are discouraging times. Times when the air seems fairly blue. Times when the sun does not shine, and the birds don't sing,—at least I do not see or hear them. I have had several such this spring. But I have lived long enough to know that such a frame of mind is fatal and that I must "snap out of it." I have learned that self-pity is about the worst pastime one can indulge in. The most cheering and helpful people I know are those who keep their troubles under a bushel but who let their light shine out thru a cheerful countenance.

✦ ✦ ✦

THE world has enough crape hangers and gloom spreaders without my adding to the number. In my several years experience with rather a wide acquaintance with people in other lines of work I have learned that farmers have not a monopoly of the discouraging things of life. They are not the only ones who have disappointments and failures. We must try hard to keep the resilient spirit of our childhood days. A child "comes back," after a disappointment like a new rubber ball when it is thrown against the wall. We call that the quality of resiliency. Grown people must strive to retain that quality, else life loses one of its most worth while things.

Herdsman—Did you water the cow?

Hired Man—Water the cow? No. Haven't watered her for two days.

Herdsman—What, not watered her for two days? Why not?

Hired Man—Didn't you say she wouldn't be dry for three months.—Pa. Testing Ass'n News Letter.

THE CHEERFUL PLOWMAN

Ill Fitting Collars

AN ILL fitting collar upon a good horse is wasteful of dollar and wasteful of force. A beast well intended is often held back by collar unmended in fissure and crack! How can a poor creature, regardless of nerve, regardless of teacher or aptness to serve, give service in measure, give service at length, give rein to his treasure of animal strength, if man and his master, unthinking, unkind, can't sense the disaster of collars that bind? A collar's a trifle of leather, no more, yet how it can stifle a horse in his chore! A collar's a tittle, a ring on the neck, yet how it can whittle, and blister, and wreck! A collar's a portion of harness, that's all, yet by its contortion how much it can gall!

Whenever I'm buying a shoe for myself I find myself trying each pair on the shelf; whenever I barter for gaiter or belt, for jacket, or garter, or bonnet of felt, I make an endeavor with all of my wits, by practice grown clever, to find perfect fits; because I know truly that one little thing which pinches unduly or offers to cling, spoils all of the pleasure of working for me, curtails beyond measure my pep and my glee.

No horse that I'm using, since this is the case, shall wear with my choosing a thing out of place; his collar, that's settled, well-fashioned and good, well padded and metaled, must fit as it should!—J. Edw. Tufft.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

After Dynamite Used

I am planting an apple orchard of 500 trees and have to dynamite the holes. Please let me know how long a time must elapse before a tree can be planted?—P. S., Bucks County, Pa.

I think it would be well to let two or three days elapse after dynamiting the holes before you plant fruit trees in them. They should be perfectly safe after that. —S. W. Fletcher.

Apricots Won't Bear

I have three apricot trees about six years old. They are in clay ground and lay a little to the sun. They have never been pruned or sprayed. Every spring they are full of blossoms and they do not freeze, but there have never been more than three or four apricots on them. I would like to know if there could be anything done to make them bear fruit.—H. E., Columbia County, Pa.

Altho you state that the blossoms of your apricot trees are not frozen, I suspect that this is the difficulty. The apricot is even less hardy in bud than the peach, and the peach is not a sure cropper in your county, by any means. The blossom, if frozen, looks normal, except that the pistil, which is in the very center of the blossom, is black. This would not be noticed unless you examine the blossom carefully.

If, however, this is not frost injury, it is lack of pollination. Some varieties of apricots do not set very well unless the blossoms are fertilized with the pollen of other varieties. The remedy would be to graft another variety of apricot into some of the limbs of these trees.

It is possible also that the brown rot fungus, which attacks apricots, as well as peaches, may have been the cause of the blossoms failing to set fruit.—S. W. Fletcher.

Spray the Apples

TO J. Z., Schuylkill County, Pa:—Your apples rot because they were not sprayed. A general spraying schedule for apples was given in the April 24th issue of Pennsylvania Farmer. See your county agent for details on spraying. It might be that he can arrange for a spraying demonstration in your orchard.

The plum trees are affected with the blackrot, which makes large black swellings in the branches. These should be cut out during the growing season, as soon as they appear. Spraying, as represented in the recent issue of Pennsylvania Farmer, will prevent the black knots from appearing.

The rotting of the plums is due to a fungous disease, the brown rot. This is prevented by spraying, as indicated in the recent issue.—S. W. Fletcher.

RADIO DEPARTMENT

Only Local Stations

I have a compact dry cell radio and am not able to receive anything but local stations. Neighbors with the same kind of radio are getting satisfaction. I have changed my aerial six times, and changed my ground. —A. C. S., Washington County, Pa.

There may be electric light or power wires within a hundred feet of the aerial which have a leaking insulator. You can tell whether such is the case by disconnecting the aerial and tuning carefully for the point of "oscillation" or the most sensitive point. If the crashing noises are heard only with the aerial on, your set is not at fault.

May Be in the House

On the other hand, you may have some electrical wiring or battery circuits in your own house which are leaking. You can generally detect this condition by unscrewing all the fuses in the main fuse box at the electric light meter and noting whether the noises stop. Of course, I do not know whether you have electric current, but this has happened and it has taken an electrician to trace down the source of leakage.

As to the ground, a buried copper screen, 6x2 feet and 2 or 3 feet underground in a damp or wet spot is far superior to what you are using. This, however, will not alter the buzzing noises. Have you had all batteries thoroly tested? The C battery in particular may be at fault.

If the electric circuit seems at fault, call upon, write to or telephone the power company officials and I feel sure they will cooperate with you and clean or replace the insulators near you. Emphasize the fact that neighbors on either side do not have the trouble.—B. F.

Feasible Not Profitable

Can I hook a generator taken from a car of the 6-8-volt or ampere type to my washing machine engine and generate my own radio batteries safely and profitably? The pulley on the engine is five inches and has a speed of 650 R. P. M., and the generator has a pulley three inches.—P. R. S., Northampton County, Pa.

It is, of course, feasible to charge your radio battery from the six to eight-volt generator you have, running the generator by belt from your washing machine engine. I do not think you will find it profitable to do so, however.

You would have to run the engine at a pretty high speed to produce sufficient current unless you provide the engine with a larger pulley. To use a smaller pulley on the generator (which will produce the same effect) will result in increased slippage of the belt.

To charge the battery at a normal rate — about seven amperes — you would have to run the engine constantly for about ten to twelve hours for a battery of around eighty amp-hr. capacity. Probably you can figure up the amount of oil and gasoline (or kerosene) required to run the engine for that length of time and learn whether or not it would be profitable. It is certainly unlikely that it would pay you to try this, especially in view of the added trouble and attention necessary.—B. F.

Farmers and home gardeners who used Pyrox spray last season said it was

far more effective in protecting plants and much more convenient to use than ever before

THE success of the new improved Pyrox last season was truly sensational. Never before did we receive so many enthusiastic letters.

More effective than ever in protecting plants against destructive bugs and insects, in controlling disease and blights and improving foliage. And so much more convenient to use. Five minutes, and you're ready to spray!

Pyrox saves time, labor and money. It goes farther. It *sticks*—making frequent sprayings unnecessary.

You can save money by getting your Pyrox in five, ten or twenty-five pound drums.

THE NEW IMPROVED Pyrox TRADE MARK REGISTERED
the powerful triple-duty spray
Kills Bugs Controls Diseases Improves Foliage
Its soft, creamy consistency is guaranteed by 28 years of manufacturing experience.
Made by BOWKER CHEMICAL COMPANY
40 West Street, New York
Manufacturers also of Bowker's Arsenate of Lead; Bowker's Calcide (high-grade calcium Arsenate); Bowker's Bordeaux; Bowker's Bordeaux Arsenate; Bowker's Lime Sulphur; Bowker's Copper-Lime Dust.

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

DEAR FORUM FRIENDS:—For nearly six months I have been awarding membership pins each week to those Forum friends who have sent in the best and greatest number of contributions for our page. At the end of June, as I promised, I shall let you know which county has the greatest number of Forum members and which has the greatest number of Forum friends. I'm wondering which will be the banner county, aren't you?

If you haven't already done your share, or if you want to swell the total for your county, now is the time to make a dash for the finish by taking part in the contest that begins this week.

Can You Find Them?

Below are ten sentences that need a lot of fixing up. Somewhere in this issue of Pennsylvania Farmer they are as they should be. Every word which appears here is in the correct sentence, but you'll find that here they're all out of order. What you'll have to do is to hunt thru the paper carefully, find the correct sentences and send them to me with the words in proper order.

In the upper right hand corner of your paper write your name, age and full address, including county, and in the left corner the word "Contest." It is not necessary to copy the incorrect sentences, simply send me the correct sentences numbered as they are here and telling upon which page you found each correct sentence.

All contest papers should reach me before June 12th. Address: Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia. Six prizes will be awarded those sending the neatest, correct papers—three to the boys and girls twelve years old and over and three to those under twelve. A camera will be awarded as first prize to the winner in each group, a fountain pen as second and a schoolbox outfit as third.

Here are the jumbled sentences. I hope you have as good a time finding the correct sentences as I had mixing them up for you!

1. The very heavy loss which may result, is a lower tree of the mean grade a product.
2. And every kind of sweet corn as vegetable in about practically the same degree loses quality as rapidly.
3. During more liberal receipts in the Philadelphia market was featured by the week.
4. The Pennsylvania black knots from spraying, of recent Farmer in appearing as represented, will prevent the issue.
5. The place of potash tobacco stems do not take but they make quite a good salt fertilizer.
6. At the rate of an hour he drove 172 miles one mile.
7. Some of our Little weekly mistakes are very careless and make Folks simple.
8. People in this class in wealthy operations realize more constructive breeding than most farmers are doing.
9. When will you have this pressure steamer or using empty cooker space."
10. Exposition buildings fast nearing the Sesqui-Centennial grounds on completion.

COUSIN RUTH

Letters from Forum Friends and Members

Dear Cousin Ruth and Forum Friends:—I wish some of you girls could be here to see my nice pets. I have three little lambs on the bottle. We have triplets and twins. I feed two of the triplets and one of the twins with the bottle. They are very nice pets. They play with me in the yard. The one that is my pet I call Billy. I feed them three times a day.

I help milk every evening and morning. It is very pleasant on a farm. — Pearle A. Kaufman (X), Snyder County, Pa.

Dear Cousin Ruth and Forum Friends:—We haven't very nice weather out here. Cousin Ruth, I received the membership pin for which I thank you very much. We are raising chickens. Our peach trees are in bloom and I hope that there won't be any frost or it will spoil the blossoms.

The strawberry plants are very green. I hope that they will have blossoms soon and get ripe. We've planted a few vegetables now but our flowers are not planted. I hope the things will grow.—Mamie Kolodchak (X), Cumberland County, N. J.

Dear Cousin Ruth and Forum Friends:—I made a garden yesterday. The arbutus is out, the only flower out here. I read in the Forum page that more candy receipes were wanted. Here is one.

SEA FOAM

3 cups of sugar
1 cup table syrup
½ cup of water
1 teaspoon vanilla
1 cup of nuts

Boil until it hairs when it drips from spoon. Beat the whites of two eggs, add one teaspoon of vanilla, then the syrup slowly, and one cup of nuts or grated cocoanut. Have all ready beforehand. Whip together until it is light and creamy. Pour into greased pan and when cool mark into squares.

Cousin Ruth, let us have more contests.—Elmo Shreckengast (X), Armstrong County, Pa.

TWO FRIENDS AND MYSELF
Elmo Schreckengast (X), Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—We just moved from a poultry farm to a fifty-six-acre farm. We have White Wyandotte hens, White Indian Runner ducks, White Chinese geese. There are fifty ducks, ten geese and a few hundred chickens. We usually have a few hundred ducks but not in winter. We trapnest our chickens. Did you ever see trapnests, Cousin Ruth? I'll tell you about them some other time, that is, if you would like to know how they are used.

I take piano lessons and can also play the "uke" which is really nothing at all.

For pets I have two dogs and a rooster which is very intelligent. We don't have cats for they are bird destroyers and I'd rather have birds, wouldn't you? I belong to the Liberty Bell Bird Club. Do any of the Forum Friends belong to that club?

I'm also a radio fan so don't think I'm behind times. I really couldn't do without it.—Lucretia Mylin (X), Lancaster County, Pa.

Dear Cousin Ruth:—We have a nice Jersey calf. We are going to raise it. I caught some trout this year but haven't gone fishing much. The fishing season opened April 15th. They are very good to eat.

In the summer we have to drive the cows to another pasture quite far away. I go on my bicycle for we go along the road with them. Sometimes we fish when we come back.—Richard Hoag, twelve (X), Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—Here I am again. I received my membership pin a short time ago. I like it, thanks very much.

School will soon be out and the Forum boys and girls will be going for hikes and camping trips. I live on a farm of 104 acres with a woods on it. I love to go to the woods in the summer and I gather wild flowers and ferns. I don't like to go by myself because I am afraid of snakes and there are several in the woods.

I help raise chickens, put up the hay, plant and dig potatoes. We had about 200 bushels of potatoes last year. I also help keep the weeds out of the garden in the summer.

Will some of the Forum friends please send in a recipe for marshmallow candy?—Ruth Weir, fifteen (X), Washington County, Pa.

Dear Cousin Ruth:—I like my membership pin and so does my brother. The children in our school all wanted to know where I got it. I told them and they were all going to write a letter to get a membership pin.

We have three calves. I like them all. I help my brother feed the pigs, hens and chickens, and feed the cows their feed and hay and then water them when we get that done. We sometimes go fishing.—Lawrence Hoag (X), Wayne County, Pa.

We'll be glad to have your schoolmates write letters to the Forum, won't we, boys and girls?

Dear Forum Friends:—We have a dog named Trick and he certainly can do tricks. We have fourteen chickens and I always feed them. Plowing season is here and I help my father.—Sandy Mazzulla, twelve, Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—For not missing a day at school my teacher got me a book.

Cousin Ruth, I have thirty-two duck eggs set. We have sixty-six goose eggs set, and about forty-eight turkey eggs set.

Here is a recipe for the kind of cake I like best.

SUNSHINE CAKE

Beat whites of 7 eggs about half, add ¼ teaspoon cream tartar, beat stiff. Add 1 cup sugar slowly, then add yolks of 5 eggs well beaten. Add a pinch of salt and 1 cup flour. Add 1 teaspoon of flavor. Sift flour and sugar 4 or 5 times.—Mildred Highlands, eleven (X), Cumberland County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet canary, Jenny. When the baby cries I tell Jenny to sing and as soon as the baby hears the bird sing she stops crying.

I also have two goldfish and when you go near the water they splash and jump with joy.

MY FATHER AND HIS NEPHEW
Myrtle Kane, Broome County, N. Y.

Our school is over and I do not know whether I passed to eighth grade or not for I haven't my report. —Irene Kueppers, thirteen (X), Butler County, Pa.

Riddle Answers

1. A yard stick.
2. A cabbage stalk.
3. A cat with a mouse.
4. A wheelbarrow.

These are the answers to Ruth Leaman's riddles published in the May 8 issue.

Week's Contributors

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You can find out what was the matter with the general if you will look carefully at the sentences below. You will notice that a letter is omitted from each sentence. For instance, you can readily see that the letter "J" is omitted from the name of the month in the first sentence, so put "J" down for the first letter of the answer. When you have found the letter omitted from each sentence, arrange all the letters in the order in which the sentences come, and you will have the answer to this serious question. When you have found the answer send it to me on a POSTCARD so that it reaches me by June 5th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks are very careless and make simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

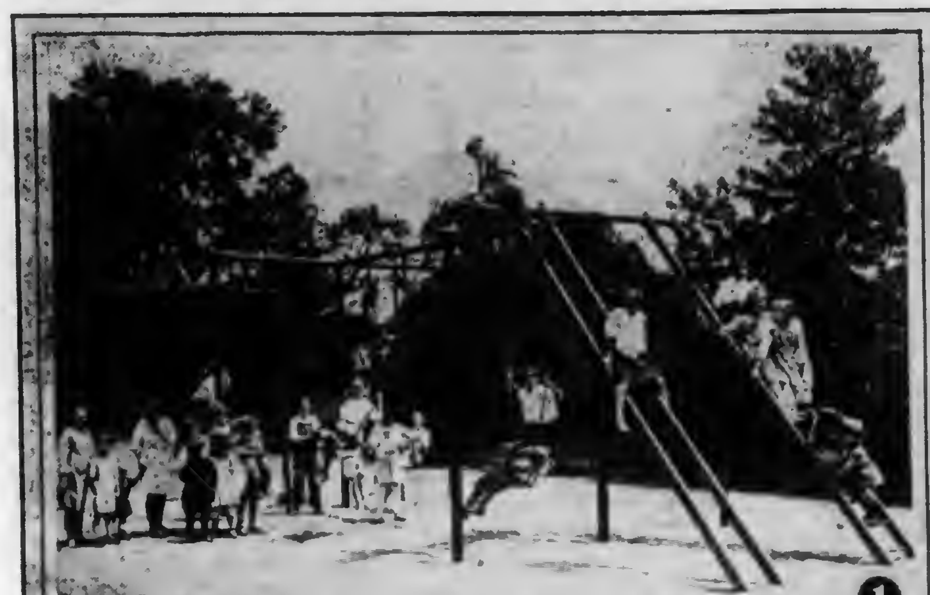
The answer to the puzzle published in the May 8 issue of Pennsylvania Farmer is: LARK, THRUSH, ORIOLE, DAW, CARDINAL, HAWK, WREN, ROBIN, SPARROW, EAGLE, CROW, OWL.

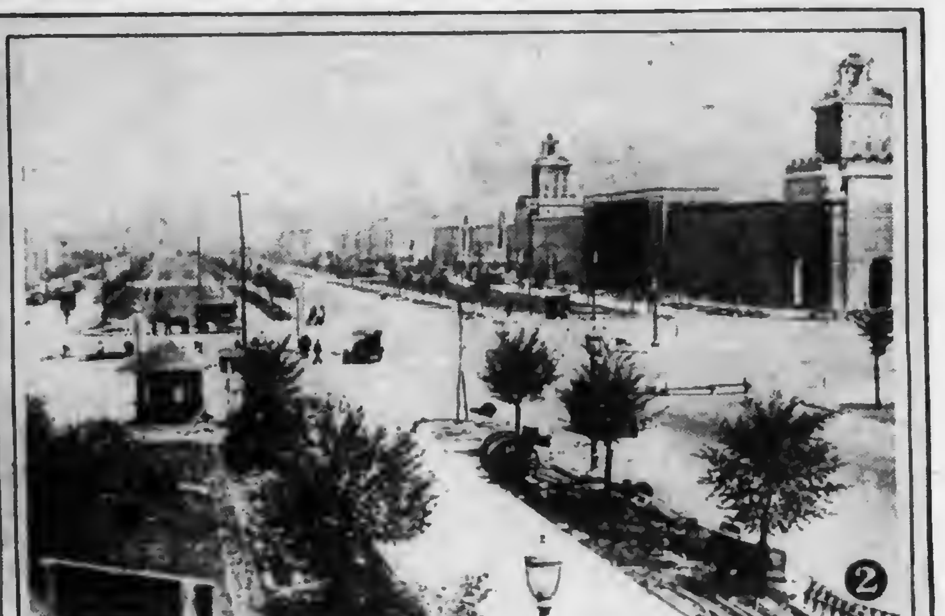
The puzzle prize winners are: Ruby Aiken, age 11, Portersville, Pa.; Joel R. Bloss, age 11, Walnutport, Pa.; Nina Duvall, age 9, Coal Center, Pa.; Eugene A. Hoover, age 11, Newville, Pa.; Clair Kuhns, age 10, Salina, Pa.; Glenn Kuhns, age 11, Salina, Pa.; Dorothy Lucas, age 9, Huntingdon, Pa.; Albert R. Stewart, age 12, Lansdale, Pa.; Arch Wager, age 11, Berwick, Pa.; Virginia Wright, age 12, Eighty Four, Pa.

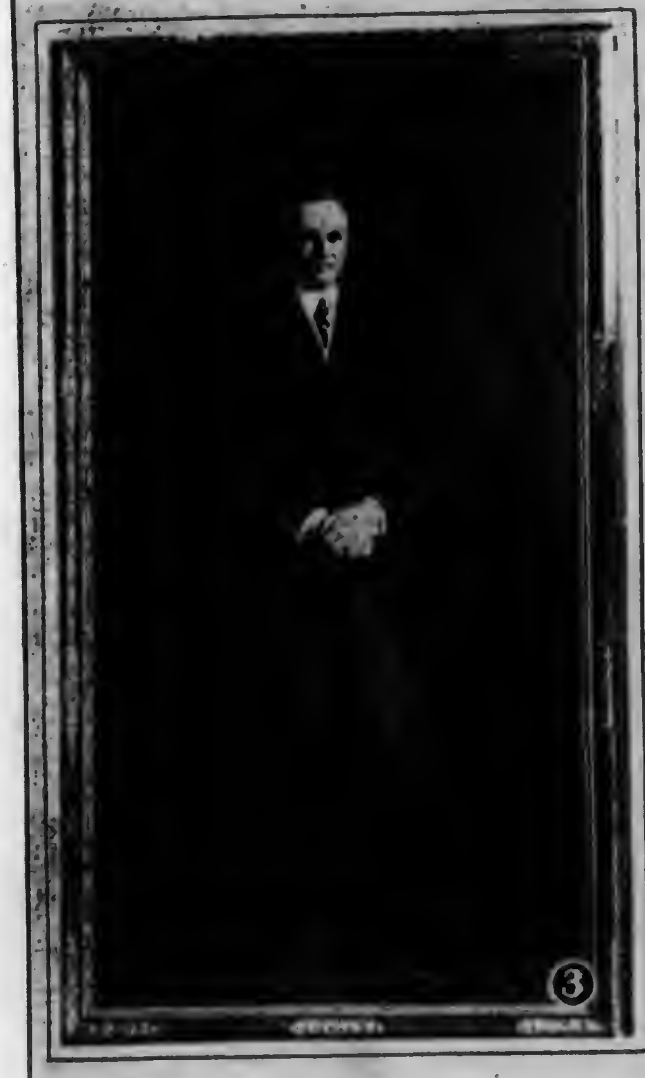
THE GENERAL WAS SICK. WHAT DO YOU SUPPOSE THE DOCTORS FOUND WAS THE MATTER?

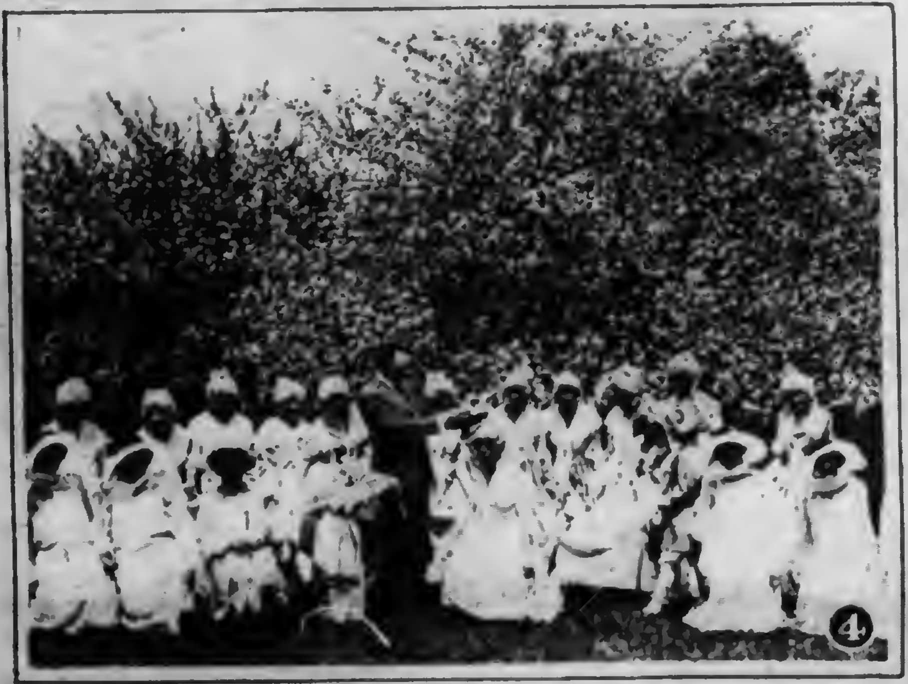
1. The Fourth of Uly is Independence day.
2. Janary is the first month of the year.
3. Woodrow Wilon was President of the United States during the World War.
4. Elecricity is a great help on the farm.
5. Pitsburgh is a large city in western Pennsylvania.
6. They found sells on the seashore.
7. Memorial Day is the thirteth of May.
8. There are seve days in the week.
9. Rus were laid on the floors.
10. Boton is a city in Massachusetts.
11. In Philadelphia the Declaraton of Independence was signed.
12. There are twelve iches in a foot.
13. The lightning shown in zizag streaks across the sky.
14. When the cat's away the mic will play.
15. Otario is the name of one of the Great Lakes.
16. You have ten fingers and ten tos.
17. New York is called the Emple State.
18. Delware is one of the thirteen original states.
19. Commander Byrd recently flew around the North Poe.

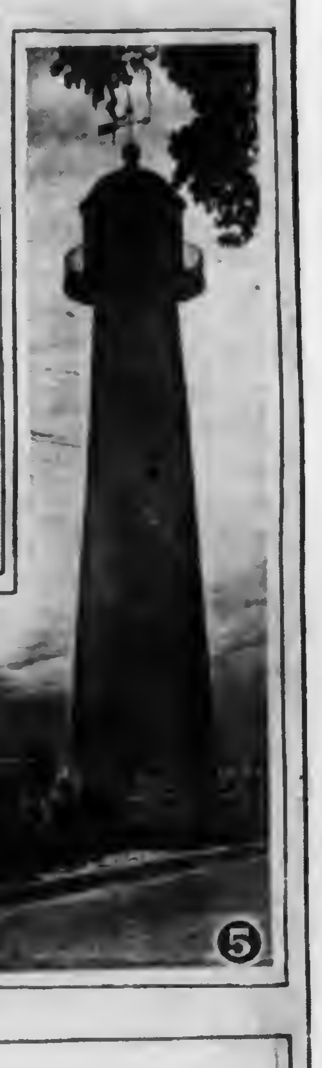
PASSING EVENTS IN PICTURES

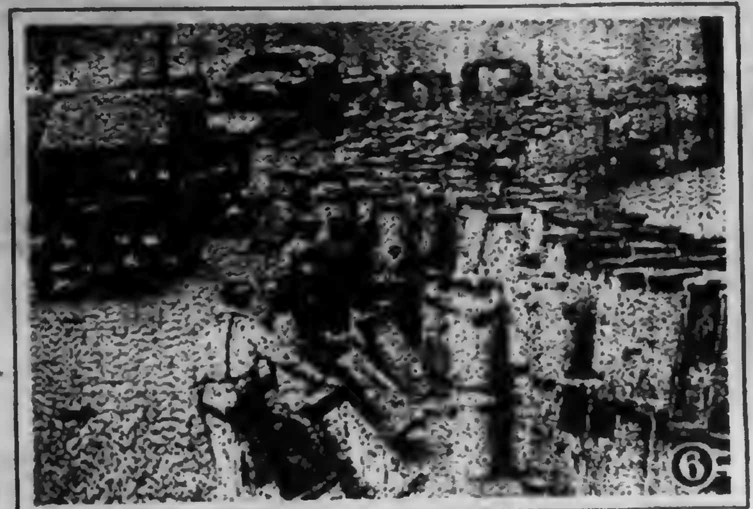


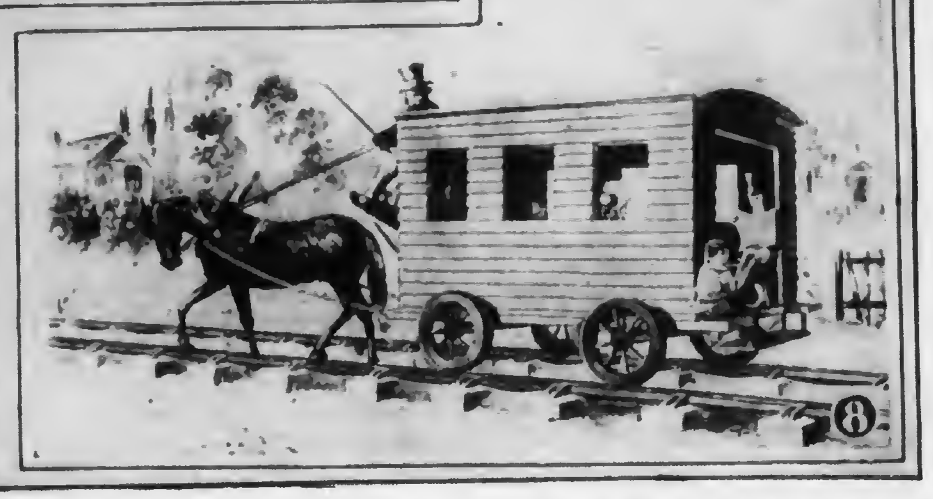












(Copyright by Underwood & Underwood)

1.—A city playground, by providing healthful recreation, is an aid to child health. This picture was taken in Chicago.
2.—Buildings on the Sesqui-Centennial Exposition grounds fast nearing completion.
3.—The life size portrait of President Coolidge, painted by Edwin C. Tarbell, which was unveiled this month in the State House, Boston, Mass.
4.—The queen of the Third Shenandoah Apple Blossom Festival being crowned by Governor Byrd, of Virginia, at Winchester.
5.—One of America's most celebrated lighthouses is the Biloxi light along the Old Spanish Trail at Biloxi, on the gulf coast of Mississippi.
6.—This photograph, sent from London by radio, shows the milk depot established in Hyde Park, London, during the recent strike in England.
7.—Piles of baled straw at one of the largest paper mills in the world. It is made into cardboard paper and the coarser kinds of wrapping paper, a ton and a half of straw being used in one ton of paper.
8.—In 1830 this was the latest way to travel!

Oven Canning Is Successful

If You Haven't Tried It Before Begin This Season

"WELL! Do you process your cherries in the oven?" was the surprised exclamation of my neighbor who happened into the kitchen at cherry picking time. I assured her that I most certainly did, and with excellent results.

"But don't the jars run over, and mess up the oven floor?" was her next inquiry.

"Oh, no. Directions say to fill only to an inch of the top, but I filled mine to half an inch of the top, and not one ran over. If you're doubtful, slip a pan or cooky sheet on the floor of the oven."

"But, if they're not full, don't they spoil?" "Not when they are cold packed. The old method meant filling full, and air space meant disaster. By the cold pack method, with lid merely resting on the top, the air is exhausted from the jar, producing a partial vacuum. The empty space at the top lowers the pressure inside the can, and makes keeping even more certain. You will have this empty space when using steamer or pressure cooker."

Regulating oven temperature. A turn of the magic red wheel sets the alarm clock. When it rings, out come the jars.

Seldom Break in Dry Heat

"But surely there is more breakage when using the oven," she persisted. "No, glass expands quickly when put into the dry heat of a slow oven, and is less likely to break than when lowered into hot water. There is no trouble putting each group of jars when filled into the pre-heated oven. A strong draught of air striking the jars when the door was opened might crack one, just as it would make a cake fall, but our summer breezes are hot. When taking jars from the oven, use hot dish holders, tightening the seal by lowering wire bale on glass top jars, or tightening screw tops, then invert on cloth, paper or a wooden top table."

My questioner could think of no other objections. She saw how lovely my cherries were in color, and in shape even better than when prepared by other methods.

A slow oven is the rule, and unless you know how hot and how long you can't be sure of results, one ovenful would be overcooked, and the next not processed long enough. I turn the magic red wheel, and set the alarm clock. When it rings, I take out my jars. The regulator automatically turns down the gas, and keeps the temperature even. When the door is opened, cooling the oven, I can heat the gas being turned on for me.

But it was not always so easy. When I oven-can with my kerosene stove, a two-dollar portable oven thermometer on the bottom shelf must be watched constantly, turning down flame accordingly. My coal and wood range had a thermometer of its own, arranged so that it was closer to the inside of the oven door than many of this type, hence closer to the jars.

A temperature of 250 degrees Fahrenheit is right for processing apples, blackberries, grape juice, rhubarb, strawberries; 275 degrees for quartered apples, cherries, peaches, pears, pineapple, plums, strawberry preserves, fruit butters and jams, and pre-cooked tomatoes; 300 degrees for raw tomatoes.

Since government experts have decided it is unsafe to can meats and non-acid vegetables processing in the hot water bath at boiling temperature, oven canning of these foods is no longer recommended, since the temperature in the middle of the can does not go above boiling.

If more than four quart jars are placed in the oven at one time, increase the time in the oven by half an hour. If a number of pint jars filling two oven racks are placed in the oven at one time, also increase the time in the oven by half an hour, being sure that jars are two inches apart and that the grate is placed an inch from floor of the oven, to allow circulation of heat. The jars are placed on this grate, as when doing ordinary baking.—Doris W. McCray.

Editors' Note:—The preparation of fruit, vegetables and jars used in oven canning, together with time and temperature for processing, will appear in an early issue.

Memorial Day

ALTHO Memorial Day seems to be losing some of its deep and patriotic significance, I think there are many of us who desire to hold that day as originally intended. I like the old name of Decoration Day, and I like the idea of remembering the graves of friends on that day. We cannot always visit the graves of many dear to us, but we can remember those who have gone before by doing a kindly act for some one living. A greeting to a shut-in or some troubled soul, a letter to a dear one too long forgotten,—these little deeds can be accomplished by the very busiest of us.

No better day could be chosen for starting an improvement campaign for the village cemetery. Be our corner great or small, there is a real duty for those who hold this day in reverent memory of the brave.—Dora Mon Dore, N. Y.

What Does Day Mean?

"WHAT do young people care about Decoration Day?" I hear parents frequently complain. "It's just a holiday to them. They'd rather go to a ball game in the afternoon and to a dance at night!"

Isn't it natural for youth to prefer action and the present, forgetting the past? Do we set them a good example? Is it reasonable to expect much inspiration from the day when we work until noon, get out the flivver, rush into town to see the parade and hear the music and then hurry home again?

Celebrations Forty Years Ago

Forty years ago Decoration Day was a great day with us eastern people. The martial music, the patriotic speeches, the march to the cemetery and the decoration of the graves were personal matters to many, bringing up actual pictures of the battle and of lost comrades.

But now those ranks have thinned to the merest fragment. Gettysburg, Bull Run and the Wilderness mean nothing to us so far as personal experience goes. Grandfather and his rambling stories of the war will soon be things of the past. What then is going to be our attitude toward the day they once held so dear?

Before the World War I saw several pathetic attempts at a Decoration Day celebration, but when our boys went overseas our hearts turned again to the significance of Memorial Day. Now the American Legion has entered the ranks of veterans and sons of veterans are walking with the two or three old fathers who still linger.

How long will this new interest last? Must we have calamity to open our hearts?—Alice Margaret Ashton.

Final Prize Sewing Hints

THESE are my sewing short cuts: Pockets and all trimming pieces go on easier before front and back pieces are attached.

Before sewing up seams on heavy materials, turn over edges one-eighth inch toward the wrong side and stitch.

Finish long tight sleeves quickly by facing the bottom the depth of the opening, before sewing up the sleeve seam.

Steam basted woolen pieces very lightly and remove basting before final pressing.

Chalked coarse thread marks dark materials better and more quickly than tailor's tacks.

To turn bias cords, sew firmly with double thread in the end of the cord, opposite the seam; then run the needle head first back thru the cord.

To make a false binding, take a fourth-inch tuck on the wrong side of material, three-fourths inch from the edge. Turn raw edge up over tuck to wrong side and finish by hand.—Edith R. Dills, N. J.

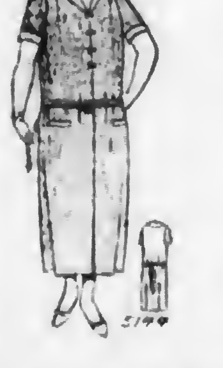
Old Dustless Duster

WHEN I purchase a new dustless duster the old one is not discarded but becomes an ideal stove-duster; one which keeps the stove spotless and does not scatter dust or ashes during dusting. Try it if you never have done so.—A. M. A.

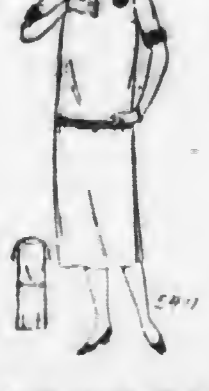
Quickly and Simply Made

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5144.—A Comfortable Dress.—Striped tub silk was here used with trimming of white broadcloth. This is also good for gingham or percale. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure.



5144

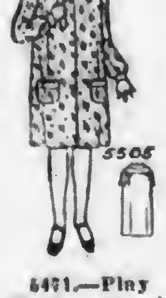


5411

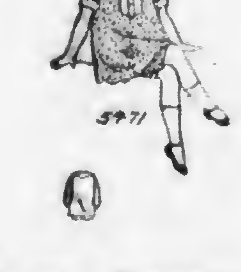
A 38-inch size requires 4⅜ yards of 36-inch material with ½ yard of 27-inch material for collar, cuffs and pocket facings. Pattern, 10 cents.

5411.—A Simple Frock.—This is a good model for gingham, linen, seersucker or tub silk. Six sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4 yards of 36-inch material with ⅝ yard of contrasting material to face collar, cuffs and a 2-inch belt. Pattern, 10 cents.

5505.—Popular Style.—This little garment may be made of cretonne, chintz, gingham or chambray. Five sizes: 6, 8, 10, 12 and 14 years. A 12-year size will require 3¼ yards of figured material and ¼ yard of plain material 36 inches wide. If made with short sleeves 3 yards of figured material will be required. Pattern, 10 cents.



5505



5471

5471.—Play Frock with Bloomers.—Challis was here used and collar, cuffs and plastron made of white washable crepe. Four sizes: 2, 4, 6 and 8 years. A 6-year size will require 2⅞ yards of figured material and ⅜ yard of plain material 36 inches wide. If made with long sleeves 2⅝ yards of the figured material is required. Pattern, 10 cents.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

A false story of Jim Blake's sent Pelletier on a search which ended abruptly when he found a baby, Little Mystery, in a nearby igloo. After MacVeigh's return, Eskimos—the dangerous Kogmollocks—came for the child and to save her the men fled. In flight they met Scottie Deane, father of the child. Next day, after the death of Deane, MacVeigh struck south taking Little Mystery to Pierre Croisset's cabin where Isobel Deane awaited her husband. Sick with fever she blames Billy with her husband's death.

(Continued from last week)

BILLY cut a few balsam boughs and spread out his blankets, but did not build a fire. When the half-breed returned to say that supper was waiting he told him that he was not hungry, and that he was going to sleep. He doubled himself up under his blanket, silent and staring, even neglecting to feed the dogs. He was awake when the stars appeared. He was awake when the moon rose. He was still awake when the light went out in Pierre's cabin. The snowman was gone from his vision; home—and hope. He had never been hurt as he was hurt now. He was yet awake when the moon passed far over his head, sank behind the wilderness to the west, and blackness came. Toward dawn he fell into an uneasy slumber, and from that sleep he was awakened by Pierre's voice.

When he opened his eyes it was day, and the half-breed stood at the opening of the tent. His face was filled with horror. His voice was almost a scream when he saw that MacVeigh was awake and sitting up.

"The great God in Heaven!" he cried. "It is the plague, m'sieur—le mort rouge—the smallpox! She is dying—"

MacVeigh was on his feet, gripping him by the arms.

He turned and ran towards the cabin, and Billy saw that the half-breed's team was harnessed, and that Pierre's wife was bringing forth blankets and bundles. He did not wait to question them, but hurried into the plague-stricken cabin. From the woman's room came a low moaning, and he rushed in and fell upon his knees at her side. Her face was flushed with the fever, half hidden in the disheveled masses of her hair. She recognized him, and her dark eyes burned madly.

"Take—the baby!" she panted. "My God—go—go with her!"

Infinitely tender, he put out a hand and stroked back her hair from her face.

"You are sick—sick with the bad fever," he said gently.

"Yes—yes, it is that. I did not think—until last night—what it might be. You—you love me! Then take her—take the baby and go—go—go!"

All his old strength came back to him now. He felt no fear. He smiled down into her face.

"I will take her out there," he said. "She will be all right—Isobel!" He spoke her name almost pleadingly. "She will be safe. She will not take the fever."

He picked up the child and carried her out into the larger room. Pierre and his wife were at the door. They were dressed for travel, as he had seen them come in off the trapline the evening before. He dropped Isobel and sprang in front of them.

"What do you mean?" he demanded. "You are not going away! You cannot go!" He turned almost fiercely upon the woman. "She will die—if you do not stay and care for her. You shall not run away!"

"It is the plague!" said Pierre doggedly. "It is death to remain!"

"You shall stay!" repeated Billy, still speaking to Pierre's wife. "You are the one woman—the only woman—within a hundred miles. She will die without you. You shall stay, if I have to tie you!"

WITH the quickness of a cat, Pierre raised the butt of the dog-whip which he held in his hand, and it came down with a sickening thud on Billy's head. As he staggered into the middle of the cabin floor, groping blindly for a moment before he fell, he heard a strange, terrified cry, and in the open inner door he saw the white-robed figure of Isobel Deane. Then he sank down into a pit of blackness.

It was Isobel's face that he first saw when he came from out of that black pit. He knew that it was her voice calling to him before he had opened his eyes. His head was bolstered up, and so he could look straight into her face. It frightened him.

He knew now what she had been saying to him as he lay there upon the floor.

"You must get up—you must go!" he heard her moaning. "You must take my baby away. And you—you—must go!"

He pulled himself half erect, then rose to his feet, swaying a little. He came to her then with the look in his face she had first seen out on the barren, when he had told her that he was going with her thru the forest.

"No, I am not going away," he said firmly, and yet with the same old gentleness in his voice. "If I go you will die. So I am going to stay."

She stared at him, speechless.

"You—you can't!" she gasped at last. "Don't you see—don't you understand? I am a woman—and you can't! You must take her—my baby—and go for help."

"There is no help," said MacVeigh quietly. "Within a few hours you will be helpless. I am going to stay, and—and—I swear to God I will care for you—as he—would have done. He made me promise that—to care for you—to stick by you—".

She looked straight into his eyes. He saw the twitching of her throat, the quiver of her lips. In another moment she would have fallen if he had not put a supporting arm about her.

"If anything happens," she gasped brokenly, "you will—take care of her—my baby—"

"Yes—always."

"And if I get—get well—"

Her head swayed dizzily, and dropped to his breast.

"If I get—well—"

"Yes," he urged. "Yes—"

"If I—"

He saw her struggle and fall.

"Yes, I know—I understand!" he cried quickly as she grew heavier in his arms. "If you get well I will go away. No one will ever know—no one—in the whole world. And I will be good to you—and care for you—"

He stopped, brushed back her hair, and looked into her face. Then he carried her into the inner room, and when he came out little Isobel was crying.

"You poor little kid!" he cried, and caught her up in his arms. "You poor little—"

The child smiled at him thru her tears, and Billy suddenly sat down on the edge of the table.

"You've been a little brick from the beginning, and you're going to keep it up, little one," he said, taking her pretty face between his two big hands. "You've got to be good, for we're going to have a—a—"

He turned away, and finished under his breath: "We're going to have a devil of a time!"

Seated on the table, little Isobel looked up into Billy's face and laughed, and when the laugh ended in a half-wail, Billy found that his fingers had tightened on her little shoulder until they hurt. He tousled her hair to bring back her good humor, and put her on the floor. Then he went back to the partly open door. It was quiet in the darkened room. He listened for a breath, or a sob, and could hear neither.

A CURTAIN was drawn over the one window and he could indistinctly make out the darker shadow where Isobel lay on the bed. His heart beat faster as he softly called Isobel's name. There was no answer. He looked back. Little Isobel had found something on the floor, and was amusing herself with it. Again he called the mother, and still there was no answer. He was filled with a sort of horror. He wanted to go over to the dark shadow and assure himself that she was breathing, but a hand seemed to thrust him back. And then piercing him like a knife, there came again those low, moaning words of accusation:

"It was you—it was you—it was you—"

(To be continued next week)

News and Notes

MANY of America's most famous hymns have been written by Pennsylvania hymnologists, among them the following: "When the Roll Is Called Up Yonder," "The Sweet By and By," "Ninety and Nine," "Will There Be Any Stars in My Crown."

* * *

Roald Amundsen now has four poles to his credit. In 1911 he reached the South Pole. In 1905 and 1906 he spent several months locating and studying the Magnetic North Pole, the one toward which the compass points; it is 1900 miles from the North Pole. Now he has flown over the North Pole in a dirigible, and also over his fourth pole, the Ice Pole. The Ice Pole, in the center of the polar ice-pack, is considered the most difficult place on earth for man to reach.

* * *

There are nineteen submarine telegraph cables lying on the floor of the Atlantic Ocean and reaching from America to Europe. The twentieth cable, capable of handling messages many times faster than any of the others, will be laid this summer.

* * *

Cass Gilbert, the architect who designed the famous Woolworth Building in New York also designed the state capitols of Minnesota, Arkansas and West Virginia, and numerous other public buildings.

* * *

An English automobile driver recently traveled faster than anyone ever traveled on land before. He drove one mile at the rate of 172 miles an hour.

* * *

New York City alone uses more electric power than twelve of the leading European countries combined.

* * *

There are ten thousand named lakes in the State of Minnesota. The state is surpassed only by Florida and California as a mecca for tourists.

Hogs—Steady; light to mediumweights, $14.25@14.75; pigs, $15.25@15.50; heavy hogs, $13.50@14; roughs, $11.50@11.75.

HAY AND GRAIN

Feeds—Quotations were as follows, all prompt shipment: City bran, $33; middlings, $31, in 100-lb sacks; red dog, $39, nominal, in 100-lb sacks; western spring bran, prompt shipment, $31.50; standard middlings, prompt shipment, $29.50; flour middlings, prompt shipment, $36; red dog, prompt shipment, $37, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.10, in 100-lb sacks; cottonseed meal, 36 per cent protein, $39.25; prompt shipment linseed oil meal, $51.80, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 2, $27@29; No 3, $25@26; sample, $10@20. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.89¾; No 1 dark spring, c i f, dom, $1.83¾; No 2 hard winter, f o b, export, $1.83¾; No 1 North Manitoba, in bond, f o b, export, $1.70⅞; No 2 mixed durum, f o b, export, $1.52⅞. CORN, No 2 yellow, 86⅝c; No 3 yellow, 84⅝c. OATS, No 2 white, 50½c; No 3 white, 49½c; No 4 white, 48c; ordinary white, clipped, 49½@51½c; fancy white, clipped, 53@54½c. RYE, c i f, export, 97c. BARLEY, malting, c i f, dom, 82@85c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Better grades of weighty fed steers weak to 15c lower; mostly 10@15c off; all grades of yearlings 25c higher, with yearlings and general run of butcher heifers, 25@50c; mostly 50c up; yearlings active all week; heavies draggy. Extreme top of heavies, $10.25; few above $10; liberal supply of 1375@1500-lb bullocks offered; best yearling steers, $10.15; yearling heifers numerous at $9.25@9.90; fat cows steady to 25c higher; canners and cutters uneven; about steady; bulls nervous; slightly higher; vealers very active, $1@1.50 higher; no change in stockers and feeders.

Hogs—Mostly steady; spots strong, quality considered; 240@375-lb butchers, $13.40@14.20; desirable 200@225-lb averages, $14.20@14.45; few good 150@180-lb weights, $14.50@14.65; latter price top; rough packing sows, $12.25@12.50; shippers, 700 head; estimated holdover, 1000 head; heavyweight hogs, $13.35@14.15; medium, $13.85@14.50; lights, $13.70@14.75; light lights, $13.80@14.75; packing sows, $12.25@12.80; slaughter pigs, $14.25 @14.85.

Sheep—Compared with week ago: Fat lambs, 50@75c higher; aged sheep around 25c higher. Week's top prices: Fat clipped lambs, $15.75; Calif springers, $17.25; do, feeders, $14; fat clipped ewes, $8.25; Calif mixed lambs and yearlings without fleece, $11.75.

WOOL MARKET

Boston, May 22, 1926.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 41c; ½-blood combing, 43c; ⅜-blood combing, 42@43c; fine unwashed, 38@40c. Mich and N Y fleeces—Delaine unwashed, 43c; ½-blood combing, 42c; ⅜-blood combing, 42@43c; ¼-blood combing, 41@42c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@42c; ⅜-blood, 40@41c; ¼-blood, 39@40c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 22, 1926.

Cloverseed, cash, domestic, $21; imported, $15.75; October, $17.75 bid. Timothyseed, cash, $3.45; September, $3.65 asked.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, May 24th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$31.50@32.00
Spring bran	30.75@31.00
Soft winter wheat bran	33.00@33.50
Hard winter wheat bran	31.75@32.50
Standard middlings	29.50
Soft winter wheat middlings	32.20@33.00
Flour middlings	33.60
Red dog flour	38.00@38.50
White hominy	30.70@31.20
Yellow hominy	30.70@31.20
Gluten feed	39.35
36 per cent cottonseed meal	37.75@38.50
41 per cent cottonseed meal	40.25@40.50
43 per cent cottonseed meal	41.70@42.60
34 per cent linseed meal	51.20@51.75

Millfeed easy under increased production and light demand.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Feed Market Situation

FEED prices again averaged lower during the week ending May 20th. Demand for spot feeds continued to decline. Production of wheat feeds and linseed meal continued light but the output of gluten feed was again of good volume, according to trade reports. Hay prices ruled steady to firm but feed grains made slight declines.

Wheat feeds averaged lower with shorts and middlings less firm than bran. Hard winter wheat bran from the Southwest was offered at considerably lower prices. Sellers there were offering bran for June shipment at 50c@$1 less than their spot quotations of $22. Demand for shorts and middlings continued very light in Philadelphia territory.

Linseed Meal Draggy

Linseed meal was draggy with lower prices. Restricted output held the market practically steady in the West but mills and resellers were pressing sales at Buffalo. Production of linseed meal for the three months ending March 31 this year was much smaller than for both the preceding quarter and the corresponding period of 1925.

Cottonseed meal was barely steady. Domestic inquiry was light in the eastern markets and export bids were limited, while the stocks of cottonseed meal and cake in mill hands at the last of April were over twice as large as last year. Dealers, however, were not pressing sales and quotations were practically unchanged.

Corn feeds were barely steady. Production of gluten feed continued large in the West and inquiries were slackening. Demand was quiet at eastern points. Offerings of hominy feed were held above buyers' prices at Chicago, altho no yellow hominy feed was to be had at that market. Quotations were steady at Philadelphia but demand slack.—United States Bureau of Agricultural Economics.

County News and Comment

Adams County, Pa.—Weather has been cold and very dry this past month. Had a nice rain Sunday and showers last evening. Corn planting and spraying are the main things now. The prospects are for a very heavy crop of fruit, cherries and peaches are well set and the dry weather is favorable for apples. About 30,000 sour cherry trees were planted this spring in the apple section of our county. Some stubble fields have been plowed for corn and old sods held over for hay because so little clover caught last year. More soy beans are being used this spring than before. Prices: wheat, $1.65; corn, 75c; oats, 50c; milk, four per cent, $2.30; eggs, 27c.—A. R., May 18.

Carroll County, Md.—At present a much needed rain is falling. Agricultural operations have been delayed this spring. Growing crops are not up to normal, grass being affected the most. Meadows have a poor start. Prospects of hay crop are not good, the stand of grass being poor and not making any growth. Some fields are being plowed down and put in corn. Barley is heading but stand not very good. Wheat has a good color and making fair growth considering weather conditions. Early sown wheat is a good stand but late sown wheat mostly thin. Oats and peas are up and looking good; early potatoes are coming thru soil. Most corn is planted. Acreage of corn and oats will be about same as last year with probably a slight increase in oats. The contract price reported for sweet corn is $3@4 ton less than last year and in view of fact that cost of raising is same the acreage will probably be decreased. Due to high price of seed potatoes fewer were planted. Locally, fewer tomatoes and string beans have been contracted for by cannery as farmers are refusing to sign up, claiming they can't secure extra labor when necessary. There is prospect of a good crop of all kinds of fruit. Young chickens are growing well. Eggs are not hatching well this spring. Pigs are scarce and high from $5@7 apiece.—H. I. R., May 15.

Crawford County, Pa.—Spring work about three weeks late. Weather has been exceptionally good, but rather cool. Most farmers have oats sown and many have potatoes planted. Some corn ground being planted. Due to cool weather pastures are short and fruit blossoms and leaves are slow in coming out. Many baby chicks are being hatched by poultrymen. Spring pigs are scarce and bringing $12 per pair. Farm produce: butter, 40c; eggs, 25c; potatoes, $2.75 bu.—O. W. G., May 18.

Jefferson County, Pa.—Are having a much needed little shower this evening. Most oats has been seeded since the first of May because of backward condition of April. Many potatoes were planted before this week and a little corn. Apparently the usual potato crop is being planted regardless of high priced seed. Winter grain fields are looking badly on account of no rain. Last year's seeding in many places is almost a failure, some of it being plowed up. Many fields show but very little clover. Pasture is very poor and a shortage of rough feed has caused many farmers to turn stock onto it. Others buying hay and have stock on full feed as in winter. Some silos being bought. Hundreds of acres of forest have been burned over. All kinds of fruit blossoms in abundance and prospects are good for a bumper crop this year. Peach blossoms are not killed. Roads in fine condition. Quite a lot of improved roads being built in this county this year. Some local prices: butter, 35@50c; eggs, 25@30c; potatoes, $3@3.50; hay, $18@20; corn for seed, $3.30 bu.; for feed, $1.25 bu.; bran, $1.90 cwt.; flaxseed meal, $3.30@3.50.—F. A. M., May 18.

Lancaster County, Pa.—Owing to late spring and continued cold, many farmers are just sowing oats and planting corn. Some corn planted the first week of May but ground was so dry it has been very slow in coming up. Fruit trees laden with blossoms. Roads are in very good shape. Tobacco has been a slow seller and the price so low that it has not paid the growers to produce it. The acreage will be greatly reduced. Eggs are plentiful and are 28c; butter, 45c; lard, 21c.—R. C. R., May 15.

Lehigh County (Upper), Pa.—Rain came yesterday. Everything looking green this morning. Apple and most fruit trees are in full bloom. Crops all delayed. There was frost two mornings last week. Grass fields are hardly more than starting to grow. In many places rye and wheat were frozen and the stand is poor. Some plowing still to be done. Potatoes are planted and most farmers planted the usual acreage in spite of high prices of seed. Corn planting also about finished. There was a decided slump in the price of old potatoes during last week. Growers that have yet large stocks on hand are anxious to sell. Hard to quote any price on old potatoes. Wheat, $1.60; rye, $1.15; corn, 80c; oats, 60c; eggs, 30c; butter, 40c.—G. J. R., May 17.

Mifflin County, Pa.—Very little rain the last month. Plowing and working ground is very unpleasant on account of dust. Nearly all spring plowing is done. Most of corn planted while a good acreage of potatoes is planted. Home raised potatoes, $2.50@3. Grass and wheat coming on very slow. Some spots of wheat died out. All kinds of fruit promising large yields. With many hay is scarce and very little pasture yet. Market: wheat, $1.60; corn, 70c; oats, 40c; butter, 50c; eggs, 24c.—J. H. B., May 15.

Somerset County, Pa.—We need rain badly. Small streams drying up and pasture lands and grass fields turning brown. Trees in full bloom except apples. Many forest fires keeping farmers from their spring work. Some corn and potatoes planted. Oats about all sown. Cattle being put in pasture. A lot of farmers not having silos are building this summer. Little chicks doing pretty well. Prices: eggs, 22c; butter, 40c; oats, 50c; hay, $18.50.—H. W. B., May 14.

Prices and Prospects

THE excellent quality of some of the Pennsylvania asparagus is shown by the fact that it is bringing the top price both in Philadelphia and New York. On May 19 this stock brought $5.00 per dozen bunches in New York and $5.50 to $6.00 in Philadelphia. This contrasts with $3.25, the highest price paid for white grass, on the same day in either market. The market in Philadelphia during the week was featured by more liberal receipts. White grass declined and green was rather dull. Recently canners have been buying prime white grass in considerable quantities but despite this it has been generally dull and slow.

Egg Market Held Firm

Receipts of eggs in New York during the week ending May 19 were liberal but the market was firm, especially on the best eggs. The government storage report of May 1 showing a shortage of 1,155,000 cases stimulated the demand. Eggs from New York State, New Jersey and Pennsylvania were plentiful and the quality was poorer. This was responsible for the weaker condition of the market toward the close of the week. Strictly fancy eggs were scarce and prices held firm.

The Philadelphia egg market held steady during the major part of the week but slight price advances were recorded at the close. Receipts for the week totaled 48,711 cases, of which number Pennsylvania supplied 4,022.

The live poultry market was irregular during the week. The early part was marked by a firm feeling and active trading. The Hebrew holiday helped stimulate the market and prices advanced. Toward the close of the week the market slumped under a lack of buying demand and many of the dealers expected further reductions.

Quality of Potatoes Irregular

The irregular quality of most of the offerings of old potatoes and the warm weather had a depressing effect on the markets during the week ending May 19th. In addition to these factors the increasing supplies of new potatoes and the heavy supplies of old stock at most large cities retarded the demand and resulted in a dull condition. Toward the close of the week the Philadelphia and New York markets showed a stronger tone. Prices on the best stock advanced and on May 19, Maine stock brought $5.50 to $6.00 per 150-pound sack in Philadelphia and $6.25 to $6.50 in New York.

A rather pessimistic attitude seems to be prevalent among the dealers and altho some advances are expected most of the trade does not believe old stock will reach the previous high levels. Pennsylvania growers have about cleaned up their stock, except in a few cases, and very little of this stock is appearing on any of the large markets.—W. R. Whitacre.

up the ladder

of UNADILLA satisfaction and safety

The Unadilla door fasteners make an ever-ready permanent and safe ladder from base to roof. The rounds, 15½ inches apart, stand out 5 inches from the doors and are 13 inches wide—as easy to climb, up or down, as your front stairs.

The Unadilla goes together easily—any handy man with a little help can erect it. It is exceptionally strong, lasting, and well constructed. It is air and water tight—frost-repelling and storm-defying. It is the most convenient, safe and workable silo we know how to build and we've spent a good many years on just this job.

Write today for our handsome, illustrated catalog showing why a Unadilla is the silo you need. It also shows Unadilla water tubs, storage tanks and vats.

If you want to take advantage of a special discount that is worth having—order early. Or, you can, if you wish, pay for your Unadilla on easy terms.

DAIRY
A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry Pennsylvania State College

Penn State Dairy Students Inspect Outstanding Herds of Southeastern Pennsylvania

A COMPANY of upper classmen in the dairy course at Penn State, accompanied by Professor A. L. Beam and Professor A. A. Borland, visited a number of outstanding dairy farms in southeastern Pennsylvania the past week.

The first stop was at the Masonic Homes at Elizabethtown where Mr. George Schuchman is in charge of the herd of 110 outstanding Ayrshires. This herd of forty-five milking cows averages over 8300 pounds of milk and 310 pounds of fat per cow annually. The senior herd sire, Penshurst Sir Robert, was one of the outstanding bulls of the breed from the type standpoint. A feature in herd sire management which attracted especial attention was the arrangement of the special stable provided for the herd sires. The unique arrangement of the doors from the box stalls into the alley permitted the sire to be used for breeding purposes without having to be handled by the attendant. Anyone contemplating the erection of a bull pen would do well to write to the Masonic Homes and get a copy of the plan which is being used so successfully there.

From a Few Foundation Cows

S. N. Root's Guernsey herd at Landisville was visited next. The outstanding feature of this visit was the demonstration of how a splendid herd of Guernseys may be built up from two or three foundation cows. Glen Gable Genevieve, a sixteen-year-old cow, still hale and hearty, was shown with twelve of her descendants—there being ten more living descendants not now at the farm. The old cow herself has a record of 567 pounds of butterfat, and several of her daughters and granddaughters have records of from seven to eight hundred pounds of butterfat.

Another fine old cow was Hazel Clementine, twenty-one years of age, with a large number of descendants. This cow produced 12,987 pounds of milk and 612 pounds of butterfat at fourteen years of age, and carried a calf 255 days during the year.

The next visit was to the Jersey herd of Mrs. Edgar V. Seeler at Newtown Square. Here a herd of eighty-three beautiful Jerseys was seen. Many of them are imported animals.

The party reached Brentwood Farms at Abington in time for the Fifth Brentwood National Holstein sale. Bell Farm Matron, a senior two-year-old cow, was grand champion female in the show. She had produced over twenty-three pounds of butter in seven days and over ninety-three pounds in thirty days. She was purchased by the Detroit Creamery Company for $2500. Matador Segis Walker, 14th, 431617, a typy son of Matador Segis Walker, consigned by the Carnation Milk Farms, Seattle, Washington, was the grand champion bull at Brentwood. He brought $1500 in the sale.

Farming in the Suburbs

Erdenheim Farms at Chestnut Hill, Philadelphia, was visited after a stop at the headquarters of the Inter-State Milk Producers' Association of Philadelphia. Farming in the suburbs of Philadelphia has to bring in large returns in order to bring interest on the investment. Mr. Widener recently received an offer of $2500 per acre for the 600 acres in the farm. This means the farm alone is worth a million and a half, and would have to bring in $90,000 returns annually simply to pay the interest on the investment.

These wealthy farmers, however, play a real part in the improvement of the breeds, since they can afford to purchase outstanding sires and mate them with the best of females. Wealthy farmers in this class are doing more than most people realize in constructive breeding operations.

Glen Foerd Farms at Torresdale was an interesting Ayrshire farm. One hundred and ten out of the 130 animals in the herd are descendants of Penshurst Rising Star. A number of Ayrshire records are likely to be broken when more of this bull's daughters come into milk.

Manure for Nursery Fertilization

At the Moon Nurseries, Morrisville, the herd is kept primarily for manure for nursery fertilization, but it is also kept on a paying proposition from a strictly dairy standpoint. The excellent herd includes 125 Guernseys of which seventy-five are cows in milk. One feature of the bull pens at this farm is worthy of particular note. The pipes which form the partition between the bull pen and feed alley are set in concrete and sufficient space is left between to permit a man to pass thru readily. Should the attendant be attacked by a bull he can easily slip thru the partition and get out of range of the animal.

The last place visted was Sinking Springs Farm at Reading. The senior sire, King Tweed Spring Farm, is an excellent example of a proven bull. Twenty-nine of his daughters at the average age of three years, three months, and three days have produced 494.1 pounds of milk testing 3.92 per cent in seven days; the average butter production is 24.248 pounds. The whole herd a year ago averaged considerably over 14,000 pounds of milk per cow per year. This is doubtless one of the highest producing herds in the whole country, and is a striking illustration of the value of a proven sire.—A. A. Borland.

Father—Your conversation is exactly like the musical scale.

Debutante Daughter — Musical scale, father?

Father — Yes. You start with dough and you finish with dough.

"I hear you've got a new maid at last. Is she a good cook?"

"Oh, yes; she goes to church twice on Sundays—but she can't cook."

The Voice of the People

The T. B. Question

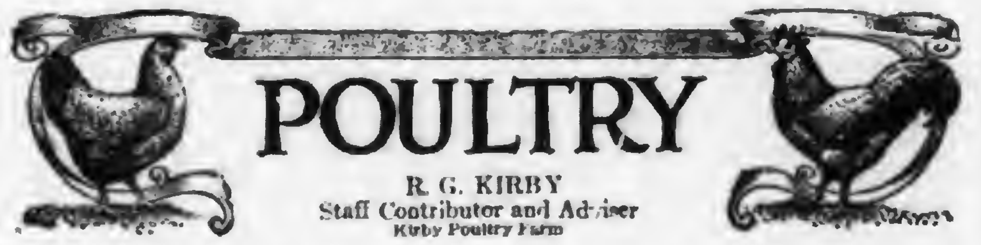
I READ an article in your paper of February 20, under heading, "The T. B. Question."

I, for one, think for every one you lose as subscribers like the one from Chester County you will gain a dozen good thinking farmers. He said, "Get your cows tested and if they never had T. B. they will always have it afterward."

Some of our adjoining districts have had their cattle tested, many of the farmers not losing one. I believe the farmers of our township will want their cattle tested inside of three months. I believe it is a good thing. I am no politician, neither have I any one who is hunting a job.

I would not be surprised if we could see the cattle of the writer from Chester County we would find a very small herd.

Go ahead and publish what you think is for the good of most concerned and you will always come out on top. — A Cumberland County Farmer.



Keeping Up Summer Egg Production

HERE are some of the ways we have used to keep up summer egg production. The same laying mash is used as the birds receive in winter. With the exception of green feed on the range there is no change of any importance in our summer ration. I feed grain quite heavily in spring and summer. It helps the hens to keep up their weight even when laying heavily. All that are sold for meat in the early summer culling are in better condition for market. All that remain are better able to keep up production during warm weather. There is less danger of early molting.

A cool hen house retards the molting period. A closed hen house on sunny summer days is bad for the health of the hens and the keeping quality of the eggs. Open the doors and windows to give the houses as much ventilation as possible.

A little shade on the range helps to keep the hens in good physical condition. Fruit trees, corn or sunflowers are fine for that purpose. Our hens prefer to dust in the cool moist loam in the shade of the rows of corn.

As soon as baby chicks hatch there is a tendency on many farms to neglect the old stock. Mites accumulate beneath the roosts and the dropping boards are not cleaned regularly. Hen roosts should be sprayed regularly.

If the male birds are sold or isolated after the breeding season bills are less and infertile eggs are produced.

After They Leave the Farm

Even tho the farmer may give fertile eggs the best of care and sell them to private customers in good condition, that does not guarantee how the customers will keep the eggs before they are used. If they are allowed to remain in a warm room or near a gas stove for a week or more, they may be in poor condition when used and the producer receive the blame.

When customers buy summer eggs for preserving in water glass they are more sure of success if they use infertile eggs. Every bad egg that goes to market in the summer helps to cut down the demand for eggs and reduces the price for eggs at all seasons.—R. G. Kirby.

FOXES

QUALITY DARK BLUE FOXES—That produce large litters and wonderful pelts. Buy direct from one of the world's largest Blue Fox Farms. Low prices. Breeder Agents wanted. Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW POX OR FALSE COW POX.—Sometime ago we bought a cow that had something the matter with lower part of udder and teats. We did not know it until it had spread over our herd. The parts are a rosy red for a time, swell, then at other times turn a gray color. The skin next udder is full of pimples at times and hair comes off and at intervals larger sores break out, scabs form that are hard to heal. Makes them so hard to milk. Gets on our hands too. They look red and show white in the little seams. We have fine cows. I have tried a good many things. I do hope you can tell me something to cure them.—Mrs. G. H. W., Dallas, Pa. This is either a case of true cow pox or a condition rather commonly called false cow pox. When the pimples first appear, bathe the udder with a boric acid solution. This is prepared by dissolving in hot water as much boric acid as will go into solution. Procure from your druggist a small amount of potassium permanganate crystals and put enough crystals into sterile water to make a deep wine colored solution. Bathe the sores with this solution after the udder has been dried with a clean cloth following the bathing with the boric acid. If any of the sores appear difficult to heal, paint these with tincture of iodine and glycerin in equal parts.

COW CANNOT STAND.—I have a cow ten years old that can't get up. I have a set of tackles to lift her a little so we can turn her over. She eats fairly well. Have been feeding her hominy. She is due to freshen the last of this month. Am feeding meal now. What is best thing to do for her?—S. M. A., Harrison Valley, Pa. This condition occurs with too much frequency in cattle which are fed on a ration which is not properly balanced or where there is an abnormal body structure. The diet should be watched, being careful to give plenty of clean fresh water, bran and oil meal to aid in bowel evacuation, and sufficient grain and roughage for nourishment. A mixture of four parts steamed bone meal and one part common salt should be in reach of the animal at all times. The cow should be turned every six to eight hours and kept well bedded.

HEIFER GIVES MILK.—I have a heifer two years old that will be fresh in two months' time. She has milk. Should she be milked before she gets fresh or not? I feed her only hay and cut out all grain about two months ago. She started to bag so fast she has the appearance of a cow.—C. M., Summit Station, Pa. The milk flow of a heifer should not be stimulated by a heavy diet or by milking. It is sometimes necessary to relieve the pressure on the udder by milking but it is not desirable unless the pressure becomes marked. The gland will not function to any extent unless milk is removed.

PROBABLY LUMPY JAW.—I have a cow that has a lump on the jaw bone about the size of a hen's egg. It started about two months ago. It seems hard and nothing comes from it. Can anything be done for it? Is the milk fit for use or would the meat be fit for beef?—R. H. G., Echo, Pa. This is probably lumpy jaw or actinomycosis. The infection evidently involves the bone and accounts for the hard lump. It may be necessary to have this operated on. This is a disease transferable to other animals and to man.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

MILLIONS, cabbage, tomato and onion plants, $1. 1000. Catalogue free. Clark Plant Co., Thomasville, Ga.

WILL GROW POTATOES

An Allegheny County Farmer Asks About Soil and Fertilizer

I am located about twenty miles west of Pittsburgh in Allegheny County. Potato growing has never been gone into very extensively here. Last year I grew a fairly good crop but I want to increase the yield this season. The ground I expect to use is good heavy loam with plenty of organic matter. It has been heavily manured. We have an unlimited amount of sheep manure and a supply of sixteen per cent acid phosphate and can get tobacco stems from factory. —F. C., Allegheny County, Pa.

I see no reason why you should not be able to grow good potatoes on the land which you have described.

You have used a large amount of manure, and therefore it should not be necessary to use any other nitrogenous- fertilizer. With too great an excess of nitrogen, there would be a tendency toward excessive vine growth with a corresponding reduction in yield of potatoes.

Use the acid phosphate at the rate of 800 to 1000 pounds per acre, and muriate of potash at the rate of 100 to 150 pounds per acre.

Using Tobacco Stems

Tobacco stems make a good fertilizer but they do not quite take the place of potash salt. You could, however, use the tobacco stems at the rate of about 300 pounds per acre, mixed with the acid phosphate and the muriate of potash, if you care to do so.

If potatoes have shown any tendency to scab on your land, it would be well to treat the seed before planting.

Formaldehyde treatment:—

1 pint of formaldehyde (40 per cent commercial solution).
30 gallons of water.
Soak uncut seed ½ to 1½ hours.

Corrosive Sublimate treatment:—

4 ounces of corrosive sublimate (mercuric chloride).
30 gallons of water.
Soak uncut seed ½ to 1½ hours.—A. W. Blair.

Seeding Sweet Clover

How can I get a start to grow sweet clover in spring on wheat ground?—F. W. F., Snyder County, Pa.

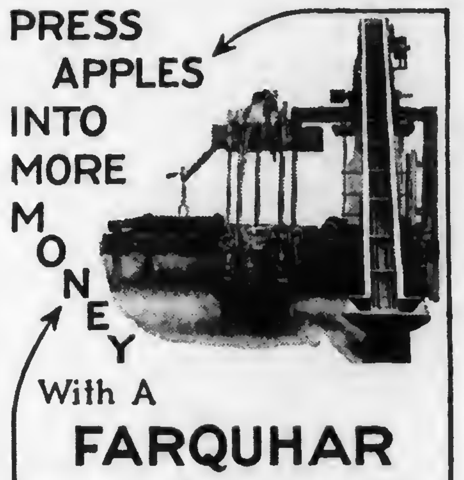
Sweet clover may be seeded in wheat in the late fall or early spring. If seeded early the freezing and thawing of the ground tend to cover the seed so it will germinate. It is rather too late now for such seeding this year.

If neither sweet clover nor alfalfa have been grown on this land, it would be safest to inoculate.—A. W. Blair.

The Use of Land Plaster

TO J. E. S., Chester County, Pa. Land plaster has been successfully used as a preservative for manure because it helps to hold the ammonia, and it has been used also as a corrective for the alkali lands of the West. Its use in eastern agriculture is limited except as a preservative for manure.

I would suggest that you use acid phosphate analyzing either fourteen or sixteen per cent phosphoric acid. For oats you could use 200 to 300 pounds per acre, spread broadcast and harrowed in. For corn it could be used at the rate of 300 to 400 pounds per acre, spread broadcast and harrowed in or applied in the drill. If you find it more convenient to apply it on top of the row, I see no objection if evenly distributed.—A. W. Blair.



PRESS APPLES INTO MORE MONEY With A FARQUHAR CIDER PRESS

Big Money in custom pressing if you install a Farquhar Cider Press. Apple Growers in your community will keep the press busy through the entire season.—and you will have a profitable income each year.

I made money on my Maine Farm

STARTED farming in 1915 with a debt of $1500 on a $2000 farm. My dairy herd now numbers 15 pure-breds, the house has water, lights and furnace and fields are twice as productive. Raised a hundred-barrel an acre crop of potatoes. Just turned down an offer of $5000 for the farm. Profits paid off the debt, made the improvements and I am laying by something each year.

Last year's returns were $4238.83. Any farmer can do as well in Maine if he is willing to work.

This is one man's story. Read what 100 other farmers say in

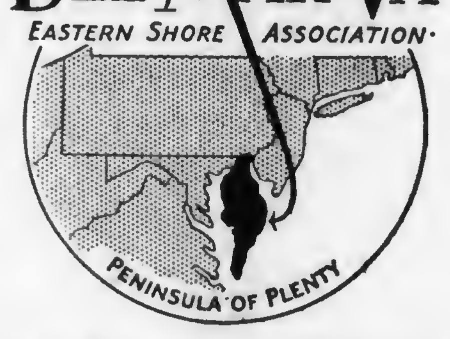
One-Man Farms PAY in

DEL-MAR-VA
EASTERN SHORE ASSOCIATION



185 to 210 growing days a year

300 days of Sunshine Fine Soils

The Historic Eastern Shore
Come over-see it for yourself

The Del-Mar-Va Peninsula lying between Chesapeake Bay and the Atlantic Ocean offers the opportunity for increased profits to practical farmers. Its soil is fertile, land prices and taxes are relatively low.

Productive farms can be had from $50 an acre up. Much of this land is improved. It will never sell so low again. Large holdings are being split up to make way for small farms, and intensive cultivation is multiplying a supply of wealth-bringing produce.

Conditions are ideal for small farms, trucking, gardening, orchards, nurseries, dairying, poultry. Market of 20 million people within a radius of 300 miles. Splendid transportation by rail, boat and truck. Two thousand miles of improved modern highway.

The Peninsula lies at your very door. Take a trip and see it. Convince yourself. 25 to 35% of all tomatoes shipped in the United States come from Del-Mar-Va. Enormous yields from white potatoes, sweet potatoes, melons, peaches, apples and berries. Wheat and corn. Practically every crop that grows in the United States, except citrus fruits, grows in Del-Mar-Va.

Living conditions are attractive. Wonderful beaches and seaside resorts within a short ride of your farm. Enterprising cities and towns. Fine modern schools in farm areas. Del-Mar-Va is a land in which you can prosper and your wife and children can be healthy and happy.

You are invited to come and by your labors share in the soundly built prosperity. We do not invite speculators and we don't want "boom" inflation.

Come and see Del-Mar-Va for yourself. Bring the members of your family and let them see what it offers to you—and to them.

—Leadclad Will Serve the Next Generation, Too!

Like the old grandfather's clock, a Leadclad Fence will serve your family for generations to come. A thick jacket of lead, seven times heavier than the coating of zinc on the ordinary galvanized fence, covers every strand of wire used in making Leadclad Fence.

Bend, twist or even hammer flat, Leadclad wire and this jacket of lead still sticks on the job. Hot, cold, wet or dry—weather doesn't affect it.

That's why a Leadclad Fence will serve you and your children without costing a penny for repairs. Expensive?—not a bit of it!

In the long run Leadclad won't cost you a third of what you are now paying for galvanized.

LEADCLAD WIRE COMPANY, Moundsville, West Virginia

THICK TOUGH

Take your knife and shave a piece of LEADCLAD Wire. Note how thick the pure lead jacket is. Bend, twist and hammer a piece. Note that it can be completely flattened without chipping, cracking or peeling the protecting lead jacket.

5% CLUB OFFER Leadclad Fence is sold to you at a single profit, direct-from-the-factory basis. We pay the freight and allow 5% discount on club orders. Sign the coupon and send it in for samples of Leadclad Wire and full information.

"Best in the Long Run"

Study Farm Profits in

DEL-MAR-VA
EASTERN SHORE ASSOCIATION

The Historic Eastern Shore

Better drive over and see the possibilities for you in Del-Mar-Va—the great Peninsula lying between Chesapeake Bay and the Atlantic Ocean. Many conditions combine to make this the ideal location for farmers seeking bigger earnings and easier living.

Good roads have added to the fertile soils of this great region the finest opportunities for profits. The highest ratio of improved roads to area of country in any part of America. A market of 20 million people within a radius of 300 miles. Trucks drive to New York in 12 hours. Complete co-ordination of shipping facilities by rail, boats and trucks. Successful co-operative marketing associations.

This is the opportunity — fine farms, abandoned when roads were poor, can now be bought from $50 an acre up. Large farms are being split up into smaller farms because truck gardening, poultry raising, etc., bring big returns from a few acres. Soils are easily worked.

These opportunities to buy are scattered through sections highly cultivated, producing fine profits, and near good schools and enterprising, attractive towns.

Because of its soils and climate this Peninsula is pre-eminent not only for its enormous production of tomatoes, potatoes, sweet potatoes, melons, peaches, apples, berries, greens, etc., but also for its early marketing of crops. Big rivers, hundreds of smaller streams and bays make this a wonderful country for wild ducks and a great variety of fine fish.

Del-Mar-Va's winters are what you would expect hundreds of miles further south. Its summers are marked by cooling breezes and low humidity. Its ocean beaches are superb. Good roads have opened up Del-Mar-Va's advantages—the future holds prosperity for its citizens.

Come and see for yourself. Bring your family—let them see what Del-Mar-Va offers to all of you.

Dr. Hess Fly Chaser
makes cows milkable

They relax. They let down. You get the last drop.

It is long lasting.

Dr. Hess Fly Chaser has the odor of the pines. Because of this odor it serves a threefold purpose:

First—It is the most effective fly and mosquito repellent known to science—quick in action, long lasting.

Second—It is an excellent disinfectant. Therefore, while it is keeping the flies away, it is also destroying the disease germs that attack your cow's body—disinfecting your barns, and injecting into the atmosphere a most healthful odor.

Third—No herd sprayed with Dr. Hess Fly Chaser ever suffers from warbles, which cause a great annual loss to dairymen and farmers.

It does not blister—does not stain the hair—does not taint milk. Applied to the hands and face, it keeps the mosquitoes away.

If Dr. Hess Fly Chaser does not prevent the milk slump, make your cows milkable in fly-time, save your horseflesh all summer long, it will not cost you one cent.

Electric Power on Locust Lane Farm

Mr. Brubaker's Lead Pencil Has Brought About Some Remarkable Developments

By C. L. WHITE

"YES, we electrified the farm first and then the house, because by that time we had proved that electricity pays."

That statement by the mistress of Locust Lane Farm was quoted on this page two weeks ago, in Mrs. Harrington's article about the electrical labor savers that have abolished drudgery from Mrs. Levi Brubaker's home.

Mrs. Brubaker's simple declaration summarizes in the briefest possible way the history of one of the best equipped and best managed farms we have encountered in our travels thru the Middle Atlantic States. Both indoors and out, Locust Lane Farm, on the Marietta Pike near Lancaster, Pennsylvania, is better equipped with electrical and mechanical devices for saving time, labor and money than any other real "dirt" farm we have visited.

Some of the buildings on Locust Lane Farm, Lancaster County, Pa.

As Mrs. Brubaker said, electricity was first put to work in the fields and barns. When it had thoroly proven its usefulness and economy outside it was brought into the house, too.

Mr. Brubaker's Problem

The story of the electrification of Locust Lane Farm dates back to a knotty problem in farm management that Mr. Brubaker had to work out several years ago. The term "farm management" may seem high-sounding and vague, but there was nothing vague about the problem Mr. Brubaker faced when he started farming.

Mr. Brubaker and his mules.

The question was this: How could Locust Lane Farm be run at a profit when no help could be gotten for the rush seasons except at outlandish wages? Mr. Brubaker knew he couldn't compete with the big factories of Lancaster for day labor. The only way out was to eliminate the rush seasons, or to find a way to get the rush work done without extra help.

This is the way he worked out the problem: First, he planned to grow enough crops and feed enough livestock to keep a fixed number of men busy the year around. Then he bought machinery and electrical equipment that would enable him to handle the big jobs without additional help.

Hires No Help at Rush Seasons

Mr. Brubaker's solution has proved to be the correct one for his particular problem. When we visited him late last fall we found him with three men whom he employs the year around. There is work for them to do every day, but there are no rush jobs, not even in harvest time, that they cannot handle themselves.

A brief survey of Mr. Brubaker's plan of operation will give us an idea of the big tasks he has for his mechanical helpers.

The farm contains 133 acres; about 120 acres are used in the main rotations. This crop land is divided into two parts which are operated like individual farms. Three twenty-acre fields on the west side of the farm are operated with a rotation of wheat, alfalfa and potatoes. The alfalfa is broadcast on the wheat in March. The next summer one cutting is made for hay, and a little later the hogs are turned in.

On the three fields on the east side of the farm a rotation of wheat, corn and tobacco is followed, with sweet clover broadcast on the wheat in the spring as a cover crop. The clover is plowed under the next spring for corn, which is followed by tobacco and that by wheat again.

Last year Mr. Brubaker put in 37 beef cattle feeders in October, to be fattened on corn silage and cottonseed meal and sold in February. Early in October he sold 65 purebred Hampshire hogs. In the summer, before the corn was ready, they had been turned into the alfalfa. When the corn had matured, about six acres of the year's crop were fenced off and the hogs were allowed to do the harvesting. This is the regular practice on Locust Lane Farm, but one that may have to be abandoned if the European corn borer gets into Lancaster County.

Just Missed the Mark

Tobacco is the crop that keeps the men busy in winter and on rainy days, but due to unfavorable market conditions it may not play as important a part in the rotation hereafter as it has during recent years. The tobacco receives 500 pounds per acre of 5-8-5 fertilizer; also manure.

Mr. Brubaker just missed the 400 Bushel Potato Club last year. His best acre produced 394 bushels, only six less than the number required for membership. As stated above, the potatoes are planted on fall-plowed alfalfa sod. They are given from 800 to 1000 pounds per acre of a 3-12-5 fertilizer. This is applied in the hill with the planter in the case of early potatoes. The late crop receives half the fertilizer in the hill, the other half being applied before planting. The total annual production is usually about 4000 bushels, altho it has gone as high as 7000 bushels a year.

A Little Giant

On any farm which turns out as many big crops in a year as this one there are many heavy belt jobs, and electricity does the belt work on Locust Lane Farm. The power unit for this heavy work is a 30-horsepower electric motor mounted on wheels. While it is rated at 30 horsepower it can produce as much as 45 horsepower in an emergency.

This reserve capacity is one of the things Mr. Brubaker likes about electric motors. Another is the fact that they don't wear out; practically all of the wear is on two bearings which are easily replaced.

The motor was in the barn when we visited Mr. Brubaker and he pushed it across the floor to a place near the door where we could get a picture of it. Can you imagine one man moving a machine that can develop 45 horsepower, as easily as he could push a light empty wagon across the barn floor? Truly the electric motor is a little giant!

This motor is started and stopped by a mechanism that looks like the controller operated by the street car motorman, only it is smaller, of course. It is mounted on the truck with the motor.

No Big Threshing Crew Is Needed

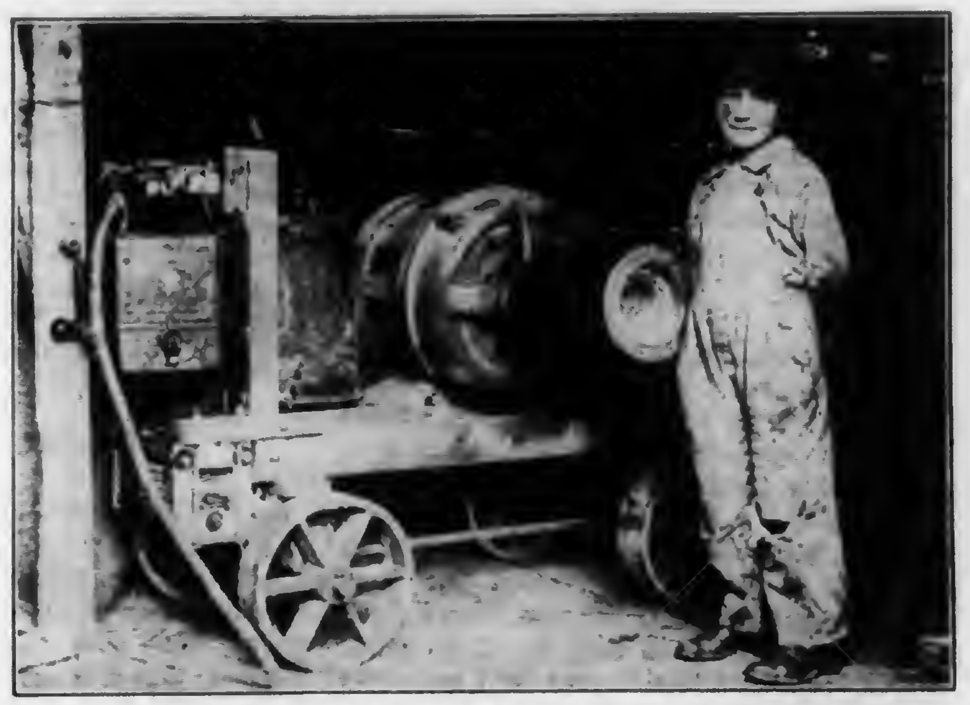
Threshing is done in the field, and it is done early. No extra help is needed, so there is no threshing crew to worry about. The electric motor is wheeled out with the threshing machine (a 30-inch cylinder separator) and is connected with the nearest power line outlet by an insulated cable laid on top of the ground.

Instead of having a big threshing bill to pay every year, Mr. Brubaker adds about $15 to his electric power bill for the month, and is square with the world. The electricity for threshing costs about 1¼ cents per bushel on the average. If the straw is tough it may go up to 1½ cents, but in very good threshing it drops to one cent.

The same motor runs a 17 by 22-inch hay baler, and until last fall it operated a 19-inch ensilage cutter at a power cost of about $20 for filling two silos. Now Mr. Brubaker figures he grows enough ensilage corn to pay him to cut it in the field. A tractor-drawn machine chops up the corn as it goes down the row and delivers the finely cut bits to a big wagonbox drawn alongside. At the barn a blower quickly puts the ensilage into the silo, without its having been touched once by hand labor.

When not needed elsewhere the motor is wheeled into the barn and belted to a line shaft to which are connected the corn sheller and other smaller machines.

(Continued on page 21)



This little motor can develop 45 horsepower in an emergency.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

As a man begins to live more seriously within, he begins to live more simply without.—Ralph Waldo Emerson

The Official Count

THE final returns of the late primary election in Pennsylvania show the results to be not so disheartening to sober-minded people as they at first feared. John S. Fisher, the Republican candidate for Governor, won out over the Combine candidate, E. E. Beidleman. This takes out of the possibilities the formation of a dominant state-wide Vare organization. It is to be hoped that the relief felt over this fact will be justified by the future conduct of the newly created party headquarters located at Pittsburgh.

Under False Colors

A LITTLE car displaying five American flags on the radiator drew up to the curb on a back street in Philadelphia the other day. The five men occupying it called a pedestrian to them and shot him dead. What a travesty upon the things which the flag represents! While it stands for life, liberty and the pursuit of happiness, these men used it simply as a bit of decoration and, with murder in their hearts, brutally trampled upon everything which makes it dear to the hearts of honest, thoughtful people. While this is an extreme case of its misuse, there are all too many instances of failure to respect the traditions and significance of the national emblem.

Giving Attention to Farmers

IT IS a relief to know that the daily papers find an occasional news item about agriculture other than the threadbare discussion of relief bills. A leading city daily carried a first-page story the other day telling how farmers in western Pennsylvania put their radio sets on wheelbarrows and wheel them along the corn rows so that the farm hands can have the very latest news, and erstwhile be consoled to their lot by a bit of jazz. Also, that they set them in the stable doors so their time may be spent profitably while they milk the cows. It was a strong omission, however, for them to fail to mention the beneficial effect on the cows which music is said to have, causing them to give more milk. But then, even the best writers will slip up sometimes.

The Backward Spring

WHILE it is still possible for weather changes to occur which will make it possible to secure normal harvests, the time has arrived when the watchful farmer realizes the possibility of short crops. The absence of sufficient spring rains and the evenly low temperatures have retarded the development of nearly all crops so that the condition is ominous. In spite of the weatherman's declaration that the temperature has been normal, the farmer knows that he is talking by the book and not in terms of plant life. The average temperature for April and May may have been normal and yet so devoid of periods of high temperature that vegetation could not flourish, and that is just what happened this season. When, as has been the case this year, it turns cold after every rain things simply cannot grow.

Electricity

THE two articles we have published about the electrification of Locust Lane Farm indicate what a boon electricity can be where it is put to work to help the farmer and his wife. There are thousands of farmers who would like to have all the electrical conveniences owned by the Brubakers of Lancaster County, but they think they cannot afford them. Or they think they would have them if the electric power company could be persuaded to build transmission lines out thru the country.

The complaint of the power companies is that even when farmers are within reach of a transmission line they don't use enough power. The farmer says the rate is too high. The company says the farmer doesn't use enough current to justify a lower rate. Both are right. There is sure to be a deadlock in many sections until some workable subsidy plan is devised, unless both sides give in, the farmer agreeing to use enough current, at lower rates, to make his electric installation profitable to himself and to the company.

No matter what plan is adopted for solving the problem, we don't want one that will work out like the Ontario plan. The following paragraph shows what we mean. It is taken from a copyrighted report written by E. A. Stewart, of the University of Minnesota, following his investigation of rural electrification in Ontario, Canada:

"Ontario farmers desiring service are required to sign a contract obligating themselves to pay the fixed monthly charge referred to every month for twenty years (from $3.11 to $11.88 per month). This twenty-year contract becomes a lien on the farm and, if there is default in payment, it is collectable as taxes, making evasion impossible. I encountered a number of poorer farmers who signed these contracts but were unable to finance wiring of their homes. These farmers are receiving no electric service but have been paying the fixed charge monthly for a number of years."

Religious Education

A GREAT deal has been said during the last twenty years about the necessity of providing for religious education. During the last six or eight years the more thoughtful people have said that is the crying need of the age; that it is the only way to successfully combat the harmful tendencies in modern civilization. But with all the discussion no one has proposed a plan which meets with the approval of all the people. Differences of opinion make it impossible to make such education a part of the public educational system. Several denominations have cooperated to conduct periods of instruction in religion outside the school hours or in connection with them. But until the advocates of religious education learn to distinguish between sectarianism and religion little real progress will be made. As long as the chief concern is the increase of denominational numbers the successful teaching of real religion will continue to lag.

Editorial Sidelights

WE HOPE soon to have an article from Doctor Lipman about his latest trip to Europe. Every other year he goes to Rome as a delegate to the International Institute of Agriculture. The Institute is a real league of nations. The leading scientists of nearly every civilized nation on earth get together there and pool their new discoveries in agricultural science. Their profound discussions are the forerunners of the new practices that will make farming more efficient in the future.

During Doctor Lipman's absence this spring, questions from readers on soil and fertilizer problems have been answered by Professor A. W. Blair, soil chemist of the New Jersey Agricultural Experiment Station.

Last week our Dairy Editor, Professor Borland, wrote about the trip made by Penn State dairy students to some of the leading dairy farms of Pennsylvania. The boys and their two guides, Professors Borland and Beam, made their tour in one of those large buses that connect State College with the outside world. They covered a lot of territory in an amazingly short space of time.

We wonder why Granges and other groups of farmers don't hire motor buses for more of their trips, instead of going in long strings of automobiles and eating pounds of dust on every mile of dirt road. The new buses are comfortable, and surely it is a lot more sociable for twenty or thirty to ride together than for each little group of four or five to travel by itself. Double-decked buses that seat more than sixty people are now being used on the streets of Philadelphia.

That reminds us of a New Jersey Pomona Grange that chartered a large excursion steamer last summer, and spent a glorious day on the Delaware River. It will not be long until some farm organization will hire the Los Angeles or another of Uncle Sam's dirigibles and go for a regular skylark.

Washington Letter

NO FARM RELIEF LEGISLATION.—The defeat of the Haugen bill by a vote of 167 to 212 in the House May 21 has led to the quite general conclusion of agricultural organization leaders in Washington that there will be no farm relief legislation enacted during this session of Congress.

There is a bare possibility that the Senate will pass the Jardine cooperative marketing bill which has already passed the House, with the Haugen bill attached as a rider. In this case the bill would go to conference where a compromise might be worked out which would be acceptable to the Senate and House. Then the proposition would be up to the President to sign or reject.

ATKESON'S PLAN.—Dr. T. C. Atkeson, Washington representative of the National Grange, says if it were left to him to act, he would pass the Jardine cooperative marketing bill amended in some details, which provides for a division of cooperation in the Bureau of Agricultural Economics. Then he would make a careful study of the intermediate credits act, with a view to enabling the Federal Farm Loan Board to provide loans on more liberal terms to cooperatives, as contemplated in the Tincher bill.

The Department of Agriculture could give the necessary advice, and the intermediate credit banks could supply the needed credits without government control or interference with farm life and the farming business.

FARMERS ASK FOR REGULATION.—The farmers, according to Dr. Atkeson, are the only people who have ever asked to have the government set up a board or commission to control their business. The railroads did not want government regulation thru the Interstate Commerce Commission. Business did not ask for the Federal Trade Commission; it was set up in the face of their opposition, and they have never had any use for it.

OPPOSES EDUCATION DEPARTMENT.—The position of the National Grange on the Department of Education bill was made plain to the joint congressional committee by A. M. Loomis. He stated the Grange's opposition to the creation of another department in the federal government with a secretary in the President's Cabinet for the purpose of education.—E. E. Reynolds.

Harrisburg Letter

STUDYING THE RURAL SIDE.—Members of the committee named some time ago at the State Department of Public Instruction to make a study of rural education in Pennsylvania from all angles have divided their work so that the consideration will run over a period of a year and possibly two. Over fifteen different organizations or elements have been asked to cooperate. There will be meetings of committees during the summer and fall and it is possible some of the proposed legislation may be ready for the next general assembly.

STILL TIED UP.—Judging from what is heard about the State Capitol the situation in regard to rural electric regulation is still up in the air. The Public Service Commission has thus far refused to comply with the request of the Governor for complaints against the companies' rate schedules. It is making an examination of its own into the situation. Meanwhile the Superior Court will consider the proceedings to upset the whole business, while on the companies' side it is said some studies of the problems are in progress.—Hamilton, Harrisburg.

New Jersey Letter

BREEDERS CERTIFYING FLOCKS.—The forward trend of the poultry business in New Jersey is indicated by the number of poultrymen who are applying for certification of their flocks this year. Approximately 50,000 birds were certified this last year and for the coming season applications indicate 75,000 birds to be certified with performance record kept thru the season on 10,000. The work is conducted by the State Bureau of Markets.

POTATO EXPERIMENTS UNDER WAY.—Variety tests on potatoes in southern New Jersey are apparently showing that the average yield on New Jersey grown seed is slightly in excess of the same strains of potatoes grown in the North. On the J. Harry Kandle farm in Salem County one fertilizer experiment is now being continued in its tenth year on the same plots. The fertilizer experiments are under the general direction of the New Jersey Experiment Station, the various growers cooperating. Potato spraying and dusting tests on the same farm are now in the thirteenth year.

LOCAL GRANGES ACTIVE.—The New Jersey State Grange this last season has been making special effort to build up and improve the programs of local meetings. Under direction of Dr. W. H. Whiton, lecturer of the State Grange, the various subordinate Granges have been working for honors on a contest basis. The various phases of the monthly programs are valued at a certain number of points and the programs are scored and honors given accordingly. Last month, Mickleton, Pascack and Raritan Valley Granges received the highest scores, showing the widespread interest in various parts of the state for program performance in Grange work. Flag Day on June 14th and Primary Day on June 15th will be important occasions in the Granges of the state.

NEW AGENT IN SALEM.—Boys and girls club work in Salem County is now in charge of William G. Frisbie, succeeding Fred J. Goggin, who recently resigned. Mr. Frisbie is a graduate of Cornell and for the past eight years has been teaching vocational agriculture in Atlantic County. He has also been in rural school work in New York state and at one time was principal of a large rural school.—B.

New York Letter

DAIRYMEN TAKE A NEW START.—Dissatisfied with the failure of the state-wide dairy committee to effect a plan of uniting all producers of the state, the leaders of the northern counties, with whom originated the last movement, have held another meeting and have recommended another state-wide meeting to be held in Utica on June 22nd.

HAUGEN BILL PROTESTED.—Hamilton Fish, and other leaders of the state, especially milk producers, protest the passage of the Haugen bill. They believe that cooperative marketing should be depended upon to aid corn farmers, and other farmers. They believe this bill would hit the dairymen of this state in two ways, as they would have to help furnish financial relief for corn growers, and it would also raise the price of corn for feed.—M. G. F.

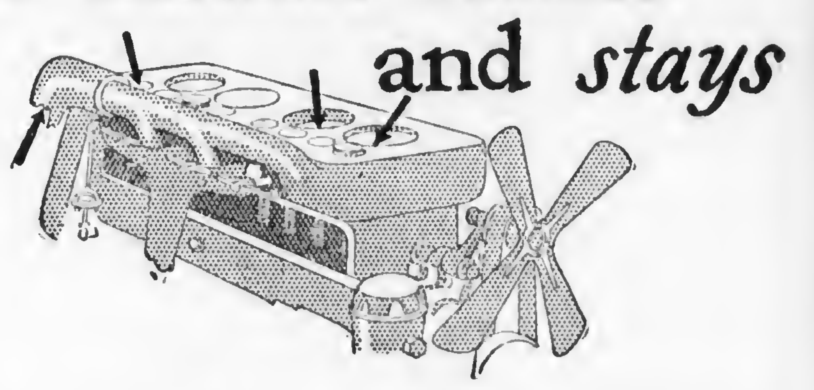
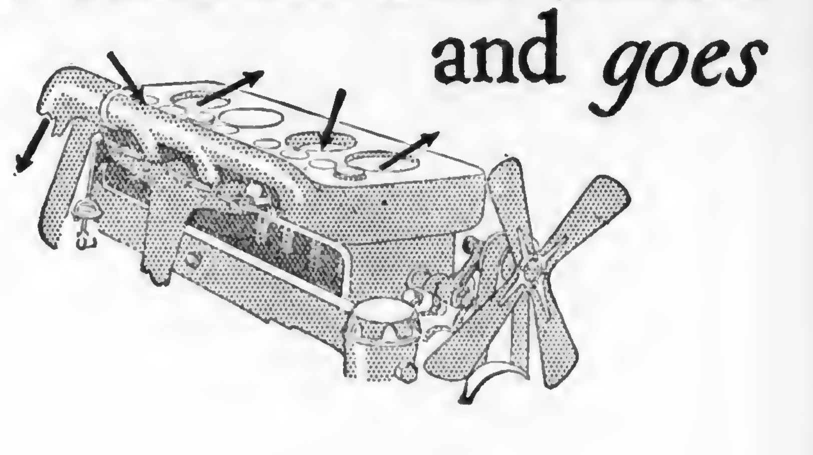
Ford Owners:
Most carbon comes and *stays*



Here's carbon that comes and *goes*



YOU can't stop carbon from forming in your Ford engine. It forms in *every* motor. But there are different types of carbon. Some oils leave sticky carbon. Some oils leave hard-as-flint carbon.

Mobiloil "E" is unique in leaving light, fluffy carbon that is readily expelled through the exhaust. First-time users of Mobiloil "E" say over and over that they have carbon cleaned out far less often than with other oils—running two to three times their usual previous mileage before the need is felt.

When you cut down carbon you cut down expenses in *many* directions. The engine needs opening less often. The gasoline consumption is lower. The power is greater. The engine runs smoother and more quietly. New spark plugs are needed less often.

Cheap too, to prove it

Next time you drain and refill be sure to have 4 quarts of Mobiloil "E" put in your Ford crankcase. It will be the beginning of a real economy administration in the affairs of your Ford.

And you can carry this economy over to your Fordson by using Mobiloil "BB" in summer and Mobiloil "A" in winter.

Vacuum Oil Company, Headquarters: 61 Broadway, New York. Division Offices: Chicago, Kansas City, Minneapolis.

BOGGS POTATO GRADER
The Standard Grader

Grades Accurately WITHOUT BRUISING

If a grader bruises or otherwise injures potatoes, it is bound to lose money for you. The Boggs Grader positively cannot bruise or injure even the greenest potatoes, as they are carried up over an endless patented belt.

Due to the Boggs belt-within-a-belt, you can sort and grade No. 1 and No. 2 sizes of all shapes with less than 3% variation in size from Government grades, and at the same time eliminate culls and dirt. Such accuracy is impossible with square or diamond shaped mesh belts.

And for speed the Boggs stands alone. It will grade from 75 to 700 bushels per hour, depending on the size of machine. The power graders cannot be overloaded even if you dump in potatoes by the bag or barrel.

Deflector makes it unnecessary to stop machine when a bag is filled. Simply push the deflector to the other side of chute and fill the empty sack while the full one is removed.

Is compact and portable. Lasts a lifetime. Made in six models, to operate by hand, motor or engine, at $40 and up.

Write today for free illustrated booklet.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

I KNOW of no more interesting branch of market gardening than raising melons. First, there is the anticipation of enjoying their fragrant lusciousness later. Then, the growing vines present an attractive picture as they develop and blossom. Added to these esthetic features is the battle of wits against lice, bugs and disease. I know of nothing that requires greater vigilance on the part of the grower than the keeping of melon vines in healthy, growing condition. From the time they poke their first leaves thru the ground until you pull the partially loosened melons from their stems, you are subject to surprise attacks from many quarters.

✤ ✤ ✤

BUT it is worth the cost when you succeed. Our previous experience has encouraged us to increase our planting this year. On May 22 we planted two and one-half acres which makes, at the spacing we give them, about 2000 hills. Last year we put the seed in the ground on May 15, but the soil was warmer than it is now. Melons, to grow rapidly, require high temperatures and sufficient moisture. Several people, after reading my comments on last year's crop, wrote in for seed and for information, stating that they never had been able to grow cantaloupes, and felt that it was due to not having the right varieties. We buy our seed from careful seedsmen because we can do so more cheaply than we could save it from good melons. The varieties planted this year were Fordhook, Hearts of Gold, Emerald Gem, Miller's Cream, Market Surprise and Spicy. We dropped the Honey Dew because they are more trouble and less certain.

✤ ✤ ✤

LAST year we used Bordeaux mixture to control blight and mildew on melons. This year we are planning to use dust. I have been interested in dust because it is more easily applied. It seems to be highly recommended by its promoters, but woe be to those who recommend it if it fails to do the work!

✤ ✤ ✤

HERE is a bit of wisdom (?) quoted from a western college professor:

"The surplus of corn and oats, which has been keeping down the price of these two products, would disappear if a third of the six million farmers in the United States would keep and work one more horse during the present crop season."

The expression, "robbing Peter to pay Paul," is as old as the hills; at least as old as the Christian era, but it describes a lot of the "panaceas" doled out for relieving agricultural ills. The above statement is good advice from the horse breeder's standpoint, but how about the grain farmer? Suppose we reverse it and say: If a third of the six million farmers had kept one horse less last year they could not have produced the surplus which drags down the price.

✤ ✤ ✤

I HAVE a letter from a man in Pennsylvania who is willing to move off his farm to his house in town, rent his stocked and equipped farm to a good man who will keep it in good repair and condition, pay the taxes and give him half the crops and products. He is not sure whether this is a fair proposition or not and wants the opinion of others. What do experienced farmers think of it? Would you rent your farm on those terms, or would you take a farm on those terms? Write your opinion for publication, not to be forwarded. No free advertising is conducted in this column. Let this man get his proposition before the public in the regular way.

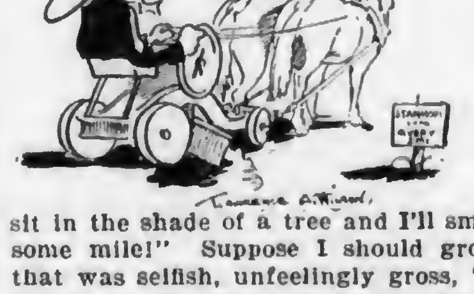
✤ ✤ ✤

IT HAS appeared to me from casual observation in our neighborhood that peaches, apples and cherries are not setting fruit in proportion to the profuse amount of blossoming which appeared. While there is probably enough, few trees seem to be fruiting more than normally, if that.

Nurse in a car going like blazes,
Tickled all over at the dust she raises.
Lets go of wheel, to fumble in her purse,
To take out her powder puff. Good night, nurse!—Laughing Gas.

THE CHEERFUL PLOWMAN

Dragging the Road



A SWIPE with this slicer right after a rain heads off for the public a volume of pain; it smooths down the way for the stranger or friend and makes the road easy for folks without end. Suppose I should say, "To the deuce with the throng, and fie on the crowd that is passing along, the ruts they encounter are nothing to me, their problems are theirs, as the world must agree; I'll sit in the shade of a tree and I'll smile to see them go tugging this wearisome mile!" Suppose I should growl in a spirit morose, from a heart that was selfish, unfeelingly gross, "There's not a man passing the shade of my tree who would get out his drag and smooth highways for me! They'd all be delighted to see me in mud and toiling thru ruts from a yesterday's flood! They'd all find a pleasure in seeing me fret from the shade of their trees by their roadsides, you bet! And since they would gladden at seeing my plight, I'll leave this road rutted, and smile,—am I right?"

Suppose I should say—but, oh, say it I'll not, that was not the way that this fellow was taught,—this fellow was taught by a father who read of a throng that on loaves and on fishes was fed; this fellow was taught by a mother who spoke how the theft of a coat meant the gift of a cloak; this fellow was taught to take into account the precepts put forth in the Speech on the Mount! That's why I am smoothing the ruts from the way for the throng that is passing my shade tree today.—J. Edw. Tufft.

The Voice of the People

I Wanted My Son to Farm

"DO YOU want your son to be a farmer?" Yes, I wanted my son to be a farmer. I wanted him to be a farmer because all of his ancestors were farmers and made a success of it. My father taught me to be a farmer. I hired myself out to a big stock farmer with a section of land in Illinois. I learned every detail of farm work, and from the very first succeeded and made enough money to put myself thru college tho I did not accomplish this until I was thirty years of age. Then I became a minister. The first thing my son saw were the crops I grew in the parsonage garden, and we owned the finest flower garden in the city.

I saw this son attain a fine education, at last graduate from a university. He possessed a fine body, height about six two, weight 175, and was engaged in every athletic game. I gave $1500 to help build a Y. M. C. A. near our home in order to give him advantages. At seventeen he went to the war and remained for two and a half years. When he came back I purchased for him a fine farm in one of the best counties in New York state. It was well stocked, horses and cows, and all the necessary implements. The house was splendidly furnished.

Within a Year He Married

Within a year he wanted to marry, and I performed the ceremony. He was saved all expenses. My chief desire was to be away with my wife engaged in evangelistic work. The boy was self-opinionated, and had high conceptions of farm work and in addition to the tools he had wanted potato diggers, twine binders, and debt did not deter him. Six months ago he left the farm and took a position at $6.00 per day. He hired boys to look after the farm.

Just when I secured a fine position in a city as superintendent of an orphanage at a good salary and support, I received a letter from home to come back, that things were being neglected. I gave up my work, came home, and have had my sleeves rolled up feeding and caring for eighteen blooded hogs, feeding and milking the cows, attending to the Leghorn chickens. The boy is away. He has gone to another state to take a "job" at $7.00 per day. He has a fine six-cylinder sedan car, and the sport propensity leads him to attend all games. He had to go to Pittsburgh to the ball game, driving all night to be the first to buy a ticket.

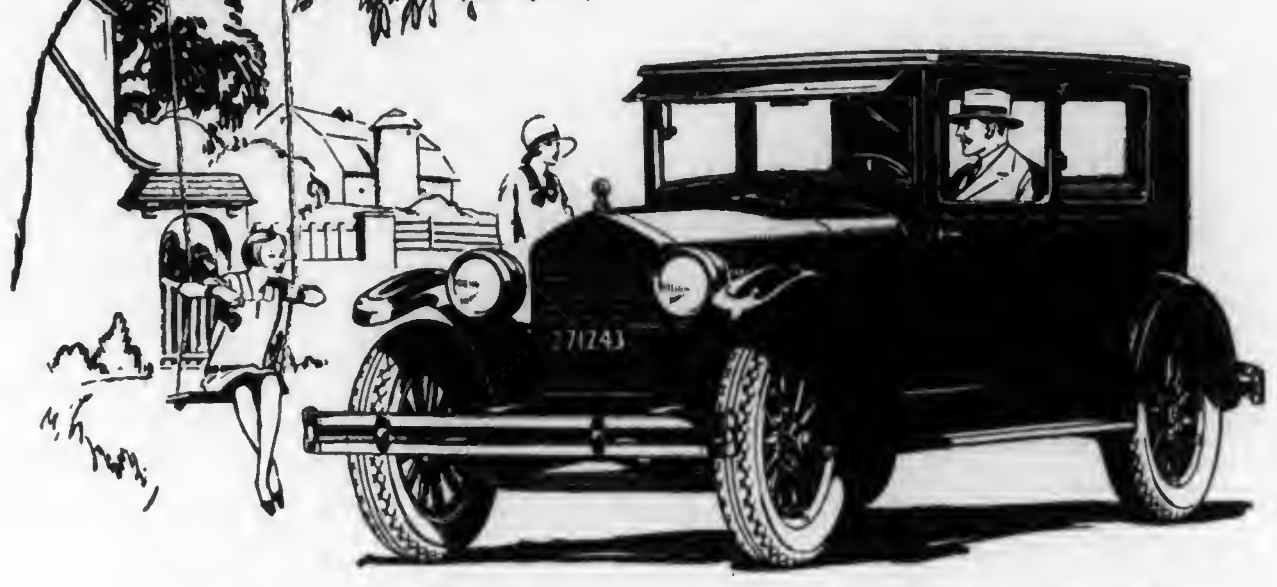
So I am a gentleman farmer now. I wanted my son to be a farmer so desperately that I did for him all that a father could do. I will have to sell the farm, tho, I made one mistake. I deeded it to him. In my desperation to help him I went over the border.—A. B. R.

A Smart Gander

THE most intelligent farm animal that I ever knew was a pet gander I owned. Here are some of the things he would do: He would go with me to the mail box which is about one-fourth of a mile each way.

When we fed a certain drove of little chickens he would be right there to chase the chickens away that came too near. He would get after mother when she fed and watered them.

Instead of staying with the other geese at night, he stayed near the coop. His name was Goofy, and when I called him he would answer in his own language. He liked me so well that if I would touch or talk to any of the other geese, he would fight them. He followed me around wanting me to make a fuss over him.—Sally Ann, Armstrong County, Pa.



ESSEX COACH
A "Six"

More Than
350,000 Essex Cars
in Service

And Today the Greatest Sales in Our History

More than 350,000 Essex cars in service and the greatest sales in our history is simply the result of giving greater value than was ever provided at this price. And thousands of new buyers who know the facts are turning to Essex for these proved and satisfying qualities, which no other car at its price ever approached.

Only among far higher priced cars will you find comparison for Essex performance, reliability and riding ease. Combined with the supreme advantage of the Super-Six principle the largest production of 6-cylinder cars in the world make this quality, price and value exclusive to Essex.

That means not only a motor design that has long held foremost place among "Sixes" but the same precision standards in every chassis detail that time and use have tested in the service of the largest six-cylinder buying public in the world.

Lowest Price in History

Important to Employers!

The Workmen's Compensation Act became effective Jan. 1, 1926, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation Schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Nearly a Hundred Years of Experience Back of this Hay-Making Team!

Side Rake and Tedder

The McCormick-Deering forms a quick-curing windrow in which the leaves are turned inward to prevent their being torn off the stems, while the stems are turned outward to get the quickest action from sun and air. The straight teeth of the McCormick-Deering side rake and tedder do this as well as any rake can possibly do it, and give perfect results in tedding as well.

In following the mower, the hay is placed upon the clean stubble, not upon the unraked swath. The teeth work against the heads of the hay, catching in the crotches between the leaves and stems and raking clean.

Roller bearings make the rake exceptionally light draft. Note the angle steel frame, the rigid bracing, including large truss beam running over the reel, the extra heavy gears, heavy piping for reel shaft and tooth bars. The main axle is solid steel.

Adjustable-Section Loader

The adjustable carrier section, shown below, allows the delivery end of the loader to be dropped so that the hay is delivered about three feet lower when starting the load. This is a great convenience as it prevents the hay blowing about as much as it does when dropped from the top of an ordinary loader. As the load is built up, the section is raised by turning the crank at the top. This crank is within easy reach of the man on the load. When the section is raised to the desired height, it is held at that position by a ratchet and pawl.

With the carrier section raised, the hay is elevated vertically ten feet and three inches, and seven feet six inches with the carrier lowered.

There are three roller bearings on the upper carrier shaft and two on the main axle. The loader is constructed almost entirely of steel with a two-inch, cold-drawn solid steel axle. The carrier slats are extra heavy and securely bolted to steel drive chains. The side boards are wide and long.

Planting Late Cabbage

I want to have cabbage and late cauliflower for winter storage. When and how should I plant seed?—C. M. C., Chester County, Pa.

Remember that it takes about 130 days to grow a mature head of late cabbage and about the same time to have late cauliflower ready to cut. Cauliflower and cabbage will both stand considerable cold weather; they thrive and grow best after the cool weather and rains begin in September.

I believe that I would plant my late cabbage seed from June 15 to July 1, and my cauliflower seed about two weeks earlier, or from June 1 to 15th. Seed may be planted in rows about one foot apart or sown broadcast in an especially prepared seed bed. One ounce of seed should grow 8000 plants. Seed should be planted where the plants can be watered and weeded. Good strong healthy plants grown on a rich soil with plenty of moisture will give the right start.—W. T. Tapley.

Advertise the Flavor

ROADSIDE marketers must appreciate their greatest asset, the surpassing flavor of a well-grown, quickly-handled, and finely-prepared vegetable. Flavor has been largely lost sight of by the commercial grower and is almost unknown to the public, except that fortunate part of it which has been able to maintain home gardens. In the future more attention must be given to the matter of freshness. The shortest route is thru direct contact with the consumer. Keep the business of your friends from town. Capitalize on flavor, grow only those varieties known for their superior tastiness. See that the town-dweller can always buy the highest quality, the cleanest, the freshest vegetables from your roadside market.—W. T. Tapley.

A Meal for the Cutworms

THIS is a recipe for a poison bait used by market gardeners to kill cutworms: 1 pound Paris green, 25 pounds wheat bran, 4 gallons of water in which 2 quarts of cheap molasses have been mixed, the juice of 3 or 4 lemons. Stir together and distribute over the field before planting, or around the plants after they are set out.

Tomato, cabbage, eggplant, corn and melon plants are most likely to be attacked by the cutworm. Small gardeners who don't want to use the bait can protect their plants by placing around each one a tin can with the top and bottom removed. Or collars of about the same size and shape may be made of heavy paper. The New Jersey State College of Agriculture advises that these paper collars be pushed into the ground about an inch, and be allowed to extend about three inches above.

Arsenic Kills Honey Bees

YOU can kill a honey bee by giving it 0.0005 (five ten-thousandths) of a milligram of arsenic. That is one of the conclusions of the United States Department of Agriculture, which has been studying the effects of poisonous fruit tree sprays upon bees.

Great numbers of bees are killed when an orchard is sprayed while in full bloom. The codling moth can be controlled just as well if the arsenical spray is not applied until 90 per cent of the petals have fallen, so the Department advises orchardists not to spray while the blossoms are out in full.

Results of these bee-poisoning experiments may be obtained by writing to the Department at Washington and asking for Department Bulletin No. 1364-D.

To a Radio Owner

TO H. I. R., Carroll County, Md.:—Yes, the five-ampere bulb-type charger requires a little more current than a five-ampere vibrator type, but not enough more to make any real difference. The extra current is only that required to light the bulb.

There is no value in using insulated lead-in wire nor in using heavy gauge. Use the same size as the aerial wire, preferably making the lead-in and aerial all one and the same piece of wire by purchasing a long enough roll to include both.

Remember that the lead-in is nothing but a portion of the aerial and treat it as such. Keep it five to ten feet away from the building wall and drape it in towards the house only near the window where the lead-in insulator tubing is situated. If it is closer than five feet to the wall, try to increase that distance by attaching a stick at the roof with an insulator at its end to hold the lead-in wire away.

Locating the Arrestor

The best location for the arrestor is outside the house so long as it is grounded outside. The best plan is to run the arrestor ground of heavy wire, not necessarily insulated, to the cellar window and thence to the water main where it enters from the street. If you have no water system, bury a large copper screening, six by two feet and about two or three feet deep in a moist place, such as near the pump or in the cellar. Use the arrestor ground as the set ground also, grounding the radio set in addition to a radiator or water pipe upstairs. There will, therefore, be two wires from the arrestor thru the window to the set. Use separate insulating tubings at least twelve inches apart for them.—B. F.

The Norge Outfit

THE big dirigible Norge which recently crossed the North Pole on its history-making journey was equipped with radio transmitting apparatus designed to operate from 300 to 900 meters. While in the dead area between Alaska and the Pole the operator on the Norge, tho he heard many of the calls Alaskan stations sent out for him and answered them continually, failed to effect a connection.

Many have wondered why the Norge was not fitted out with a short-wave outfit. The remarkably good results obtained by the MacMillan expedition in northern Greenland with waves as low as 20 and 40 meters showed the superiority of these short waves for long distance work on low-power sets, such as any set on board a lighter-than-air carrier must be.

The longer waves are better suited to short-distance work but it is fairly certain that amateurs in the states and probably in many other countries would have picked up the Norge's signals had they been sent out on a wave between 35 and 80 meters.—B. F.

To Attach Aerial

FOR country, suburban or portable set aerials one often wishes to fasten the end of the wire to a high tree limb. A good way to effect this is to obtain a lead weight—this is much better than a stone—and fasten a light line to it such as a fish-line. Get the man with the best "pitching arm" to throw the weight over the chosen branch. Next tie the rope or wire to the line and pull it carefully over the branch.

If the aerial insulator is to be suspended near the top of the tree by a wire instead of a rope, be sure to bend back the end of this wire as it is drawn over the branches by the light line to avoid its catching in the leaves or crotches of branches.—B. F.

WHEN the huge Atlantic liner is ordered into dry dock; when a steel mass as heavy as a skyscraper must be cradled snugly; when workmen swarm in the concrete basin to hammer and rivet and paint the sea-battered hull . . . what could be a more appropriate pledge of security than the dry dock's rugged concrete construction!

Engineers know that Pennsylvania Portland Cement will stand powerful stresses. Whether cement is used for a heavily travelled state highway or a small fence-post, each bag must be perfect. The famous Pennsylvania Pre-Test insures the reliability of every bag before it leaves our plant.

There is a building supply dealer near you who will deliver Pennsylvania Cement whenever and wherever you need it.

Pennsylvania Portland Cement is made only by the Pennsylvania Cement Company, which has offices at New York, Boston, Philadelphia and Buffalo.

For your light truck, use Kelly Cushion Tires

KELLY Demountable Cushion tires are intended to replace pneumatic tires on Ford and other light trucks in service where the wear on pneumatic tires is excessive.

Kelly Cushions are practically as easy-riding as pneumatics and while they cost a little more they are far cheaper in the end because they will stand up under heavier loads, are not subject to puncture and will last two or three times as long. Since they are built on the rim, you mount them on the wheel just as you would a pneumatic rim. All the tools you need are a wrench and a jack.

They come in sizes to replace 30x3 1-2, 30x5 and 33x5 pneumatics.

Little Guinea Chicks

LITTLE guineas are like wild birds and when brooded with the mother guinea many may be lost from irregular hovering and too much traveling on the range. Chicken hens are better mothers so it is best to give guinea eggs to a good clucky Plymouth Rock or Rhode Island Red hen.

The chicks should be confined in a brood coop with the hen for three or four days until they become thoroly acquainted, then give the hen her freedom in a fenced yard so she can range over a limited area with the chicks. If the hen is confined and the chicks are free, they may travel too far in the wet grass and not return to the hen. If the hen can follow the brood and scratch and keep them interested they are more apt to survive.

Common Practice of One Man

One of the most successful raisers of White African guineas that I have visited always hatched and brooded the guineas with White Plymouth Rock hens. They were brooded in a pear and plum orchard of about two acres entirely surrounded by chick tight fence.

The hens had their freedom during the day but could return to the brood coops at night. The coops were closed at sundown to keep out rats and weasels and the guineas were not freed in the morning when the grass was heavy with dew. This method required work but resulted in a fine flock of guineas that lived until they could take care of themselves.—R. G. Kirby.

Cost of Dozen Eggs

IT COST slightly more than thirty-four cents per dozen to produce eggs in Pennsylvania last year, even on farms where better-than-average methods were used. At least that was the average cost figure obtained by forty-three farmers in Bradford, Bucks, Huntingdon, Lancaster, Lawrence and Wayne Counties who kept careful records on their flocks during the 1924-25 season, as members of adult poultry associations.

The figures obtained by averaging the records of these farms, as reported by State College, are as follows:

Number of farms	43
Number of hens per farm	412
Avge. number eggs per hen	128
" net cost per hen	$3.66
" cost per dozen eggs	.342
" income from labor per hen	1.35
" net profit per hen	.66
" feed cost per hen	2.17
" feed consumed per hen (pounds):	
Scratch grains	39.8
Mash	33.4

Labor was charged at thirty cents per hour, and feed at actual cost when purchased, or at the farm price when home grown.

Million Egg Counties

LANCASTER and York Counties, Pennsylvania, each produced over five million dozens of eggs in 1925. Berks, Chester, Montgomery, Bucks, Adams and Bradford produced over two million dozens each. Twenty-two other Pennsylvania counties had an egg yield of more than a million dozens for the year.

The state's 17,465,000 chickens laid 79,000,000 eggs during 1925. These were worth about $30,000,000, which is approximately the cost of the new Delaware River Bridge between Philadelphia and Camden, New Jersey.

Those 79,000,000 eggs were only about half the number used in Pennsylvania during the year.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Dear Sir: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the the **Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea (Coccidiosis) is caused by a protozoal organism of microscopic size which multiplies with great rapidity in the intestines of diseased birds and enormous numbers are discharged with the droppings. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept., 518, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 518, Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

SHIPPING COOPS

The Kind That Last Longer and Are Easy to Disinfect

THE poultry shipping coops which consist of heavy wire on the sides and top stand a large number of trips and are easier to disinfect than coops made entirely of slats. When shipping coops are sent to large buying centers or loaned to neighbors it is best to place them in the sunshine for several days before they are stored near the home poultry flocks. This may help prevent the introduction of disease.

When the crates are sprayed with commercial coal tar disinfectant, the spraying should be done at least three or four days before the crates are used for further shipments. This gives the disinfectant a chance to dry. If the solution sticks to the feathers of the poultry the strong odor may be retained on the skin of the birds and cause trouble in marketing them.

If you live near a poultry shipping center where many old crates are stacked up each week at the express office, it saves time to paint a couple of stripes or private marks on some of the slats. Then you can locate your own crates quickly.

Good Appearance—Better Price

The use of heavy home made crates is seldom practical. They take higher express charges and do not improve the appearance of the consignment. Strong light crates containing birds of one breed and size make a much better appearance and help bring good prices for the stock.

For local delivery the double-deck crates which ride on the running board of a touring car are very useful. I have two of these crates made of heavy wire. The upper and lower deck will each hold ten or twelve heavy hens. This gives the car a running board capacity of forty or fifty hens.

The crates are held to the sides of the car with baling wire. They are easy to lift on and off and make it possible to deliver poultry to local dealers when the touring car is used for a combination of errands. No dirt reaches the inside of the car as is the case when slatted crates are heaped in the back seat.—R. G. Kirby.

The Breeding Turkeys

I HAVE always found that breeders of turkeys seemed to have the best luck when the range was large.

Turkey breeding stock should not live on a corn diet. It often makes them too fat, and they produce a small per cent of fertile eggs and vigorous poults. One part corn mixed with three parts oats makes a good grain ration. A hopper of bran containing a sprinkling of charcoal can be placed on the range and it will help prevent digestive disorders. Try feeding a hopper of the same laying mash which the chickens are eating. Turkeys do not like mash very well but if they will eat some of the mixture, it will help increase egg production.

Must Have Green Feed

The confined turkey breeding stock must have green feed. Supply them with a little clover, alfalfa or vegetables to supplement the green feed they can obtain on their limited range. It pays to feed the turkey breeders oyster shells to encourage the formation of strong shells on all eggs. Broken eggs in the nest may do considerable damage to good eggs.

If the range is not sandy or gravelly supply grit as the turkeys are heavy eaters and need plenty of grinding material. Everything that helps to increase their natural vigor will also aid in preventing bowel trouble and blackhead.—R. G. Kirby.

Sky High or Cottage Low

lead paint withstands all weather

The Dutch Boy trademark on a pail or keg of white-lead paint is your assurance of an all-lead product, made from the metal lead. Other products made under this trademark are—flatting oil (for use with white-lead in decorating interiors), red-lead, solder, and babbitt metals.

LEAD paint protects and beautifies the city skyscraper. And out where the grass begins, lead paint brightens and preserves the smallest country cottage.

The trained industrial builder, the careful small house owner—both use paint made with Dutch Boy pure white-lead. The reason? If you ask your painter he will tell you several.

It costs little. Even though Dutch Boy white-lead is made from the metal lead, its cost is low enough to satisfy those who scan appropriations, those whose household budgets are limited.

It goes far. One hundred pounds of all-lead Dutch Boy white-lead makes seven gallons of paint. These seven gallons will cover, one coat, from 3900 to 4500 sq. ft. of surface. And to "cover" means to hide, to protect against the elements, and to beautify. Here are added economies.

Any quantity can be mixed. There's no waste in a keg of Dutch Boy white-lead. Mix just the quantity of paint needed for a job—a half-pint or twenty gallons. It can be bought, too, in small 1 lb. tins up to 100 lb. kegs.

Have the colors you like. A greenish blue, a shadowy gray—all the tints and tones of the rainbow are possible with Dutch Boy white-lead. It's easy to tint, saves money, gives you what you want.

For porch chairs or the house itself. Dutch Boy white-lead can be used inside or outside. Odd jobs or big jobs; rich interior finishes; weather-resisting exterior work—this paint accomplishes all quickly and economically.

Home-owners' paint guide free

"Decorating the Home" is a new booklet, illustrated in color, which suggests decorative treatments for exteriors and interiors. It will be sent you, along with a booklet that gives complete directions for painting wood, plaster, metal and masonry about the farm, if you will write our nearest branch for Booklets F.

20TH CENTURY HATCHERY, Box Y, NEW WASHINGTON, OHIO

Good Reasons For Feeding Corn Gluten Feed

Millions of cows are now on pasture. They like it and it is good for them, but it does not supply enough feed to make their capacity flow of milk.

Prof. E. S. Savage, the famous dairy expert of New York, says: "The feeding of grain on pasture is so important that a mixed grain feed containing 17.5% to 20% protein should be fed on pasture."

Why Grass Is Not Enough

Prof. A. R. Merrill, of the Connecticut Experimnet Station, says: "Average pasture grass—per 100 pounds—contains 3.7 lbs. of digestible crude protein, but only 15.9 lbs. total digestible nutrients. There is enough protein if the cow actually could eat 100 pounds of grass, but this does not supply enough total digestible nutrients."

It takes four large gunny sacks to hold 100 lbs. of grass. A cow's stomach will hold only 60 quarts. The stomach of a cow would have to be four times as large as it is to hold as much grass as she needs.

These are reasons enough for feeding Corn Gluten Feed on pasture. The most successful dairymen throughout the U. S. are doing it. Their cows stay fresh longer and keep in better condition.

Corn Gluten Feed is the best feeding part of corn. A single ton contains the protein, mineral matter, and vitamines of nearly four tons of whole grain.

Write today for a free copy of "The Gospel of Good Feeding," our new 64-page book. It tells you how to make more milk or meat on less feed.

Run your skimmilk through a new De Laval

Guaranteed to skim cleaner

The new De Laval has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is guaranteed to skim cleaner. It also runs easier with milk going through the bowl, and lasts longer.

YOUR old separator may be running all right and you may think it is doing good work, but is it? Here is an easy way to satisfy yourself. Ask your De Laval Agent to bring out a new De Laval and try this simple test:

After separating with your old separator, wash its bowl and tinware in the skim-milk. Hold the skim-milk at normal room temperature and run it through a new De Laval. Have the cream thus recovered weighed and tested. Then you can tell exactly if your old machine is wasting cream, and what a new De Laval will save.

Thousands have tried this plan and many have found a new De Laval would increase their cream money from $25 to $200 a year.

Trade allowance made on old separators of any make as partial payment on a new De Laval. See your De Laval Agent or write nearest office below.

Figures for March Indicate Progress in Most States

THE United States Department of Agriculture reports monthly thru the Bureau of Animal Industry the progress made in tuberculosis eradication in the different states.

During March tests were conducted in 66,293 herds comprising a total of 815,053 head of cattle, or an average of approximately 12 head per herd. The five leading states in number of herds tested ranked as follows:

State	Herds tested	Head tested	Re-actors	Percent-age
Iowa	8,104	127,909	3,381	2½%
Michigan	6,617	46,955	1,239	2½%
Illinois	5,847	72,566	15,390	21%
Pennsylvania	5,225	48,504	4,527	9%
Wisconsin	4,367	80,043	9,138	11%

The total number of herds once-tested free is 1,202,505, representing 10,114,286 cattle. North Carolina leads with 187,946 herds on this list but Wisconsin leads with 984,420 head of cattle. The total number of herds under supervision at the time of the March report was 1,447,529 and 14,288,984 head of cattle, or an average of .10 head to a herd.

On the Waiting List

The number of herds on the waiting list is 432,449, covering 4,223,986 head. Ohio leads in this division with 151,249 herds, or more than one-third of all the herds in the United States on the waiting list. New York leads in the number of herds and cattle on the accredited list with 19,928 herds. Indiana is second with 15,653 herds and Pennsylvania has 4,074.

This report indicates that substantial progress has been made in eradicating tuberculosis from the herds in practically all the states. The high percentage of reactors in Illinois is due to the large amount of testing that has been done in the dairy districts near Chicago where a new milk regulation has recently been put in force.—W. H. Tomhave.

Calf Club Records

MILK checks totaling $207.69 have been received by Homer Bieler, a member of the Upper Hanover Holstein Calf Club, Montgomery County, for the milk produced by his three-year-old heifer in nine and one-half months. Her record in this time was 8775 pounds of milk. Another heifer owned by Oren Woodward, also a member of this club, has produced 8530 pounds of milk and 332.7 pounds of butterfat in eight and one-half months.

The club includes ten boys whose heifers have all freshened, dropping five bull and five heifer calves. All the members of the club are keeping feed and milk records on their heifers.—A. L. B.

League's Best Year

THE Dairymen's League has announced a net pool price of $2.115 per 100 pounds for April milk of members. This is the highest April price in the history of the League, with the exception of April a year ago, when the price was two cents higher.

The League sold nearly six million dollars worth of milk during March,—$5,823,322.63, to be exact. The average net pool price for the fiscal year ending March 31, 1926, was $2.125, the highest of any year in League history.

Dustless Air for Hogs

HERE is another use for waste oil from the crank case of the automobile or tractor. Sprinkle some of it over the ground in those shady places in the hog lot, where the porkers spend their time on hot days. It will keep down the dust. Avoid using too much, however, advises W. C. Kelley, of the New Jersey State College of Agriculture.

Briarcliff Entertains Beef Cattle Producers

ON MAY 1 the breeders of Aberdeen-Angus cattle in the eastern states met at Briarcliff Farm, Pine Plain, N. Y. The farm is located in one of the beautiful valleys of Dutchess County which, half a century ago, was famous for its fine herds of beef cattle.

The morning was spent in inspecting the herd on this farm which now numbers nearly 1000 head of purebred cattle. The breeding operations are conducted on an extensive scale. The equipment is very practical and has been developed with the idea of demonstrating that beef cattle production is a means of rebuilding the fertility of the soil in these eastern valleys.

A uniform lot of cows has been assembled at Briarcliff Farm for the production of better beef for the eastern market. The herd bulls have been selected from some of the best herds in this country. With the exception of the best breed cattle and the choicest individuals, practically all the surplus cattle will be fed on the farm and sold on the eastern market.

Prime Beef at Luncheon

After inspecting this herd of purebreds, luncheon was served in the town hall. In order that prime beef might be served a yearling Aberdeen-Angus steer had been slaughtered for the occasion.

At the meeting following the luncheon Mr. L. R. Park, Jefferson Mc., president of the Eastern Aberdeen-Angus Association, presided. He briefly reviewed the development of Aberdeen-Angus cattle thruout the East and called attention to the number of herds established in this section during the past ten years. Secretary Tomhave touched on the same topics and then pointed out the advantages which eastern producers have over those in the Middle West.

H. O. Harrison, of San Francisco, Cal., the owner of one of the larger herds of Aberdeen-Angus cattle in America, told why he selected this breed. He called attention to the excellent record that has been made by the breed at the national shows during the past twenty-five years. Any breed capable of winning honors received by the Aberdeen-Angus must be recognized as the leading strictly beef breed.

Use Best Herd Bulls

Mr. J. D. McGregor, of Brandon, Manitoba, who has been breeding Aberdeen-Angus cattle for nearly half a century, urged eastern breeders to secure the best herd bulls, for progress in breeding depends very largely upon the kind of sire that is used in the herd.

Mr. Anderson of the editorial staff of the New York Sun spoke of the interest which the meat consumers in the large eastern cities would take in the proposed better beef campaign which is to be undertaken by the beef cattle producers. Plans were also discussed for the promotion of the beef business in the East.—W. H. Tomhave.

Wool Samples Tested

WOOL growers may have samples of their wool graded and scoured, free of charge, by filing an application with the Bureau of Agricultural Economics, United States Department of Agriculture, Washington, D. C., where a wool scouring laboratory is now available for conducting such tests as facilities will permit. Applications should be mailed to G. T. Willingmyre, in charge of wool standardization. The applicant will be sent a parcel post mailing sack and instructions as to the proper method of drawing a sample so that it will be representative of any large lot of raw wool in the grease.

OUR YOUNG PEOPLE'S FORUM.

Letters from Forum Friends and Members

Dear Cousin Ruth:—I received the birthday card and thank you very much. Cousin Ruth, when is your birthday?

My sister and I are going to a store today. My mother is making me a dress. My little adopted brother is very mischievous. He is two years old. My sister and I will soon start taking music lessons. My sister and I want to get a piano. My father is going to get it. Well, I must close, I have to mow the lawn.—Belva Pealer, ten (X), Columbia County, Pa.

Oh, it will be quite a while before my birthday comes 'round again. It's the seventh of February. Now the rest of you will have to let me know when yours come.

COUSIN RUTH.

Dear Cousin Ruth:—We have a lot of little chicks. The big chickens lay well these days. I like to feed them. In the summer I go swimming and fishing. In winter I go to school. My father has a car and a truck. I go along in the spring for lime. I like to ride with my father. —Paul McQuade, nine, Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—Spring is here! I am going to tell you what a nice time I had one of these nice spring days. Five girls out of our school went for a picnic or a walk in the woods. We went in the afternoon and took our supper with us. It was very beautiful along the water, the grass was so nice and green. There was an island in the center of the creek. It was great fun going and coming from the island because you had to walk on rocks which were very shaky.

WITH MY LITTLE NIECE
Pauline Landis (X), Lancaster Co., Pa.

We ate our supper on the island and picked flowers after supper. We had lots of fun making believe we were "Robinson Crusoe" on the lonely island.

Almost every one of us had a misfortune. One of the girls stuck in the mud and it went over her shoe. While I was crossing over the rocks my foot slipped in and I got all wet. It was very uncomfortable to walk home with a wet foot but I arrived safely and expect to get a cold.

I am sending a picture of my niece and myself.—Pauline Landis, fourteen (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I haven't missed washing my teeth all year. I got a box of paints for not missing. School was out May 6.

We played eleven games of baseball this spring. One side was called the Giants, the other the Indians. The Giants won nine games. I am on the Giants side. The Indians won just two games. We played a game of baseball the last day.

We also had races the last day in the morning. My sister won one. She got candy.

At noon we had our picnic dinner. We also had five gallons of ice cream. In the afternoon we had our program. Cousin Ruth, I wish you could have been there.

I live on a lot of about two or three acres. We have three horses and a pet dog. I have five sisters and two brothers. Dannie was a year old May 2nd. He was sick almost all winter and isn't allowed to go away yet.—Katie Mast, twelve (X), Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—Spring is here and I am very glad for I can gather violets, arbutus and other flowers which I like. I am very glad, too, that school is out. I will be in sixth grade next year when school starts again.

I have a pet kitten, its name is Tabby.

FLUFFY WHITE CAKE

1½ cups sugar
½ cup butter
4 egg whites
1 cup water
3 cups cake flour
2 teaspoons baking powder

Cream the butter and sugar together. Add ⅓ of water and 1 cup of flour and beat. Take ½ of water left and another cup flour, then the rest of water and flour with baking powder, then add whites.—Mabel Deitterick, ten (X), Columbia County, Pa.

Dear Cousin Ruth and Forum Friends:—I like to go horseback riding and swimming in summer and ice skating and sleigh riding in winter.

I wish some kind friend would send me a recipe for candy. I love to make candy. I go after the mail on a horse in the summer time.—Ruth Throckmorton (X), Greene County, Pa.

Hello, Everybody:—I have a large brown and white Collie dog named Jack. I got him when he was about a month old. He comes in the house very nearly every day. Last summer while I was in the hospital he did not come in at all, but just as soon as I came home he came in again.

Sometimes I get cross at him because he goes after the cars. He has been hit many times by them. Soon after we got him he was run over and got his leg broke but he doesn't care. I am glad to state I passed the exam. for high school which was held April 17th.—Julia Amig (X), Snyder County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending a picture of my riding horse. She is four feet six inches high and can jump four feet in the air. It is a bay horse and won $25 at the Stewartstown Fair for jumping the highest. She has never done any work but ride and jump. She will shake hands with you. My brother is on her back.—Everette Anderson, fourteen (X), York County, Pa.

MY RIDING HORSE
Everette Anderson (X), York County, Pa.

Dear Cousin Ruth.—I tried a cake recipe for one egg cake, but had to add one-half cup of milk. I think Virginia Jameson forgot to put that in her recipe. The cake was very good and I will try it again.—Edythe M. Parker, nine, Atlantic County, N. J.

Dear Cousin Ruth and Forum Friends:—My brother and I raise pigeons. We have eighteen in all. We have four big white ones, two red ones, two brown ones, seven blue ones, two black ones and one black and white one. We raise them to sell.

I caught a carrier this evening coming from school and brought it home to feed it. It was nearly starved. I wish some other boys would write and tell about their pigeons.

We have two little colts. They are black. One's name is Star, the other Pet. Star is tame, you can catch her in the field and put your arms around her neck.

I can play the cornet. I play in an orchestra. My sister plays the piano. She and I play at entertainments.

Our farm is on a river which divides Howard and Montgomery Counties. I like to go swimming in it. It is a dangerous river. It has deep holes in it under the rocks—Fraley Zimmerman, fourteen (X), Howard County, Md.

Dear Cousin Ruth and Forum Friends:—My favorite pet is a black cat. He follows me wherever I go. He runs ahead and lies down and rolls, gets under my feet. Once he got under my feet and I didn't know it and I gave him a kick. We have three little kittens just now.

I live on an 80-acre farm fourteen miles above Easton. It is pretty lonesome up here for there aren't any girls near. I passed the examination for high school and will be a freshman in the Belvidere High School this fall. Last year I cut our oats with three horses in the binder. I just finished cutting potatoes to plant.

How many of you had the grippe last winter? I had, I missed twenty-four days of school. I also had to go to the hospital to have my tonsils removed. I was only in the hospital a day. I am much better now. I lost eighteen pounds but I gained eight in four weeks.

Cousin Ruth, I saw a bird this morning, could you tell me the name of it? It was bright red with several black feathers in its wings. It was real pretty. There are not many birds around here, only the common birds such as robins, wrens, sparrows, whip-poor-will, swallows, chippies and a few others.—Hester V. Hess, thirteen (X), Northampton County, Pa.

Can any Forum folks tell Hester what bird it was she saw?

COUSIN RUTH.

Dear Cousin Ruth:—I have a pet dog named Shep. He is black and white. When I lie down under the shade of the tree he will come and lie down beside me. I have four cats which are very sleepy cats. They sleep nearly all day.

We live on a fruit farm. I wish you were here to see the lovely blossoms on the trees. We have a see-saw and we ride right in the air. How many Forum friends have a see-saw?—Hazel Thompson, twelve (X), Ulster County, N. Y.

Just a Reminder

HOW'S the contest coming on? Has everybody found all the sentences that were mixed up on the page last week? Summer is really here at last with its sunshine and good times in the open and you'll be wanting to take pictures. Send in your answers to the contest—you may be the one who'll win a camera. Don't leave it until too late. Answers to be counted should reach me before June 12th. Address all Forum mail to Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—One of our little girls recently went to the circus and when she came home she talked it over with her big brother who had visited the Zoo in Philadelphia last summer. Alice and Bob talked and talked and it was late when Alice got into bed. Then, what did she do but dream all about the circus and the Zoo in a most mixed up fashion! I'm afraid the lollypops and ice cream cones may have had something to do with this. Anyway, here are some of the things in her dream.

> She saw an ELEPHANT (1) with dark stripes (a) round his body and there was a tiny SHETLAND PONY (2) which flopped about on his fins (b), while the CLOWN (3) waved his trunk (c) in the air.
>
> A GIRAFFE (4), with a long mane and tail (d), watched the ZEBRA (5) climb to the top of his cage using hands and feet (e). The MONKEY (6) roared (f) and the trained SEAL (7) stretched his long neck (g) to eat the leaves from the treetops.
>
> All the while the LION (8) cracked jokes (h) with the crowd.

Next day when Alice thought about her dream, she decided to write down just what was the natural thing for each of the parts of her dream. She began right off with the ELEPHANT (1), and she just knew that he was the one that had waved his trunk (c) in the air. On she went, with her queer mixture, until she had everything straightened out. You can do this, too, by thinking over carefully what peculiarity belongs to each one of the animals mentioned (with apologies, of course, to the Clown), and you can send me the answers on a POSTCARD this way:

(1) ELEPHANT (c) waved trunk.
(2) SHETLAND PONY—there, I almost told you that one, too.

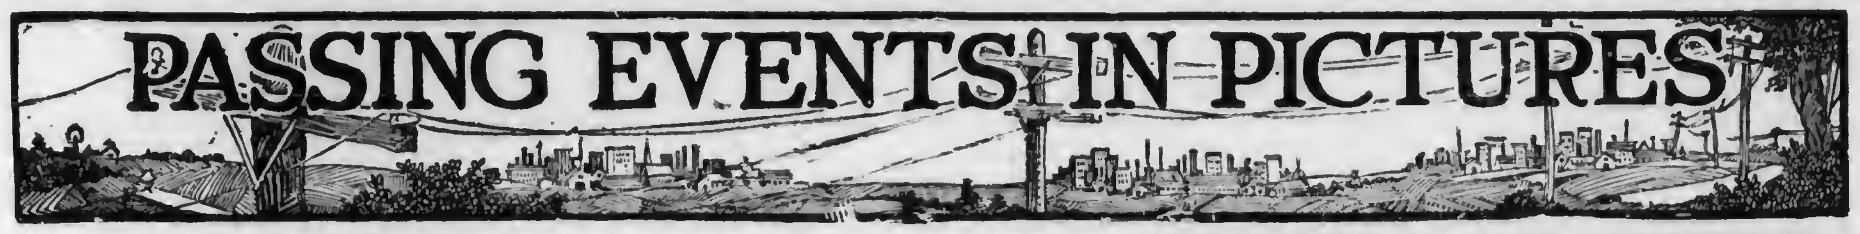
Won't you let me have your answer by June 12, so that I can see how you could help me out if I should have a queer dream sometime? BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling (better watch the spelling this time, especially), punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks are very careless and make simple mistakes weekly.

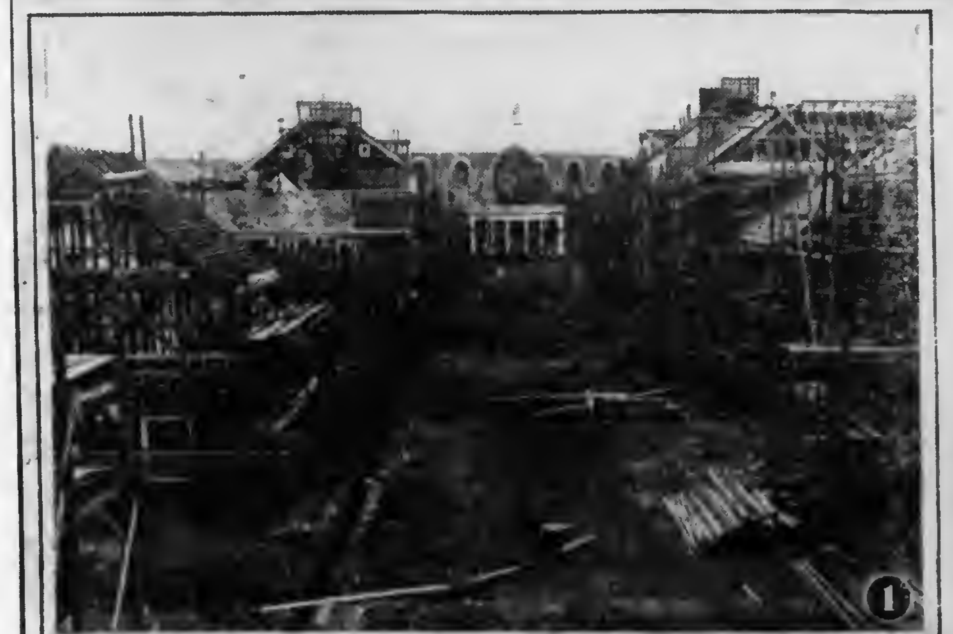
Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

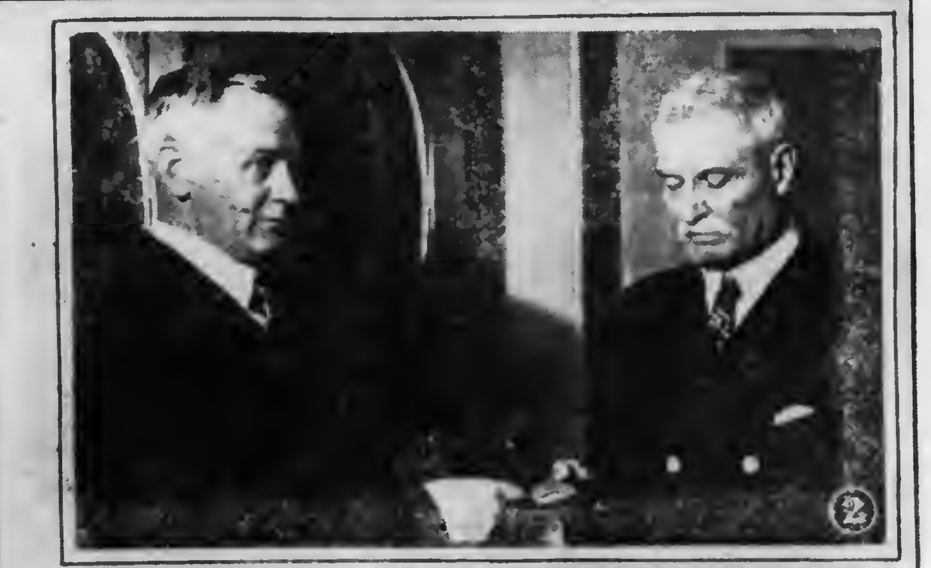
The answer to the puzzle published in the May 15 issue of Pennsylvania Farmer is: OHIO, DELAWARE, JUNIATA, SCHUYLKILL, POTOMAC, ALLEGHENY, SUSQUEHANNA, BRANDYWINE, HUDSON.

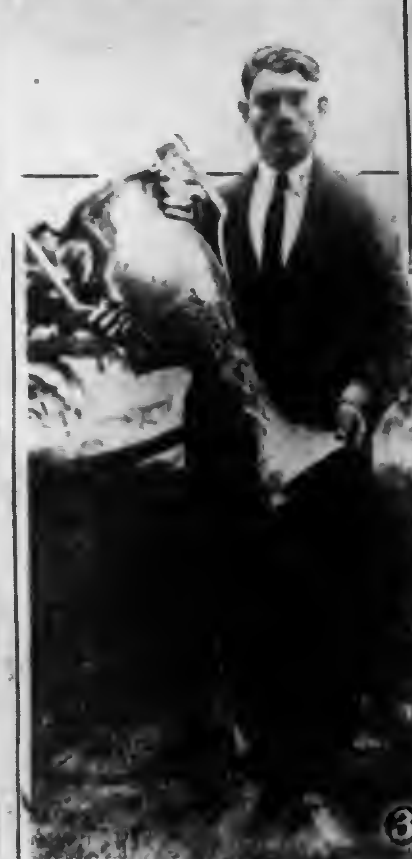
The puzzle prize winners are: Ida Angstadt, age 10, Spinnerstown, Pa.; Rose Louise Fumea, age 10, Blairsville, Pa.; Robert Groover, age 11, Lewisburg, Pa.; Jean Hower, age 9, Danville, Pa.; Martha Hutcheson, age 7, Stoneboro, Pa.; Grace Keebler, age 10, Montgomery, Pa.; Helen King, age 10, Mizpah, N. J.; Myrtle Rodgers, age 11, West Chester, Pa.; Luke L. Weaver, age 8, Union Grove, Pa.; Lois Whitehill, age 11, Hookstown, Pa.

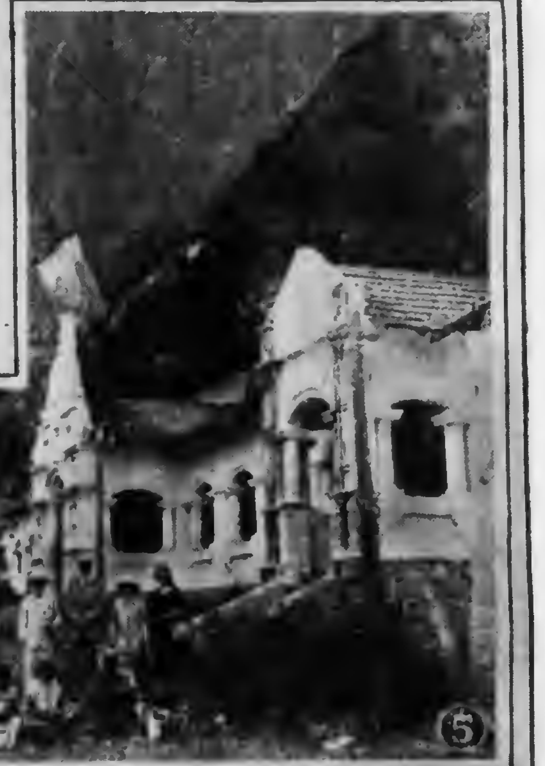


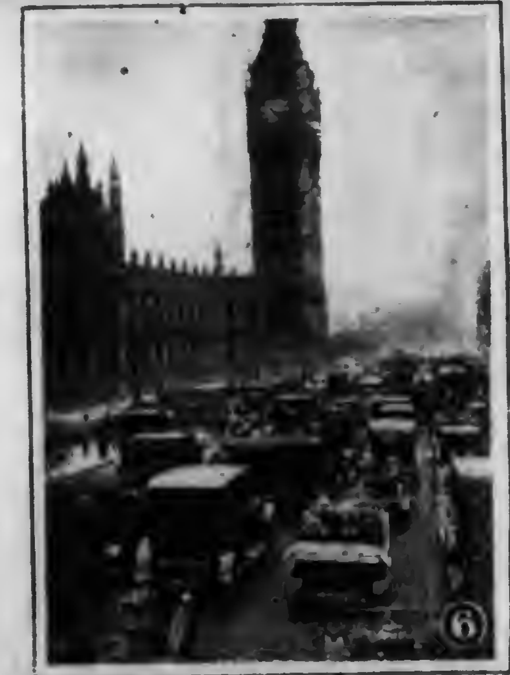
PASSING EVENTS IN PICTURES

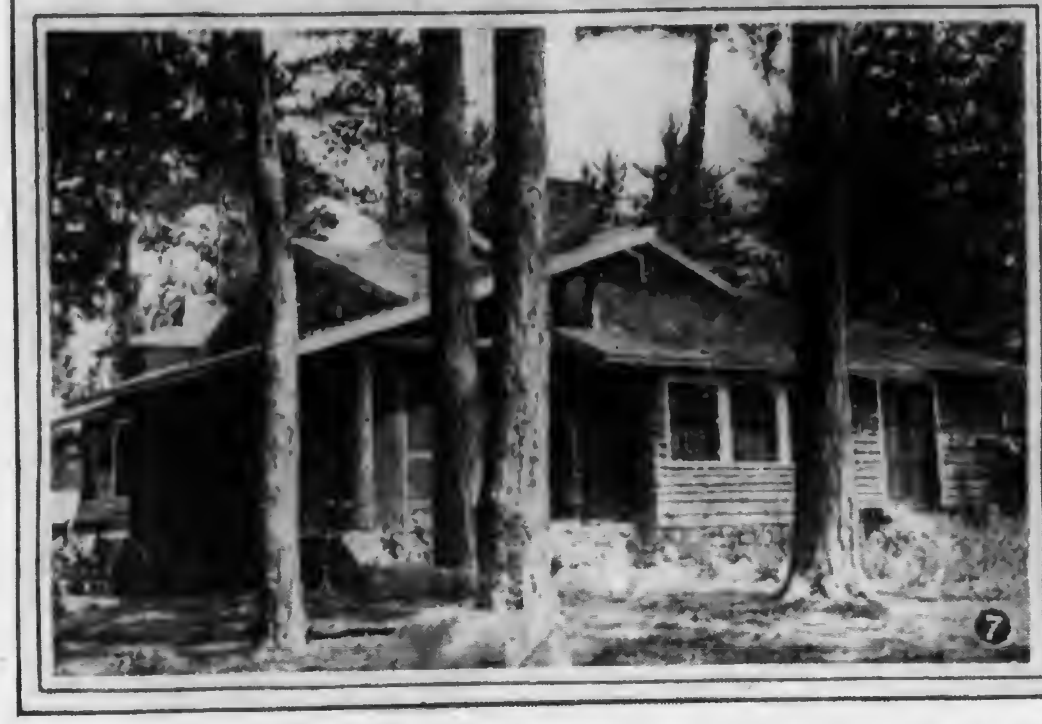


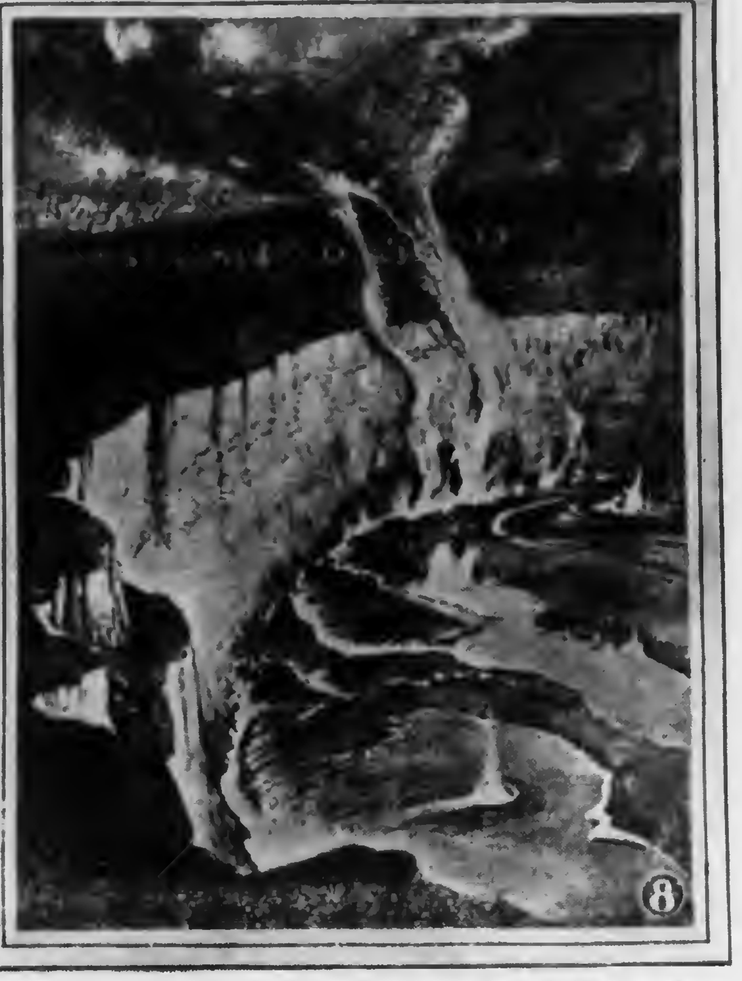












(Copyright by Underwood & Underwood)

1.—A reproduction of Market Street, Philadelphia, as it looked in 1776, when it was called "High Street," is being erected on the Sesqui-Centennial Grounds.
2.—Samuel Rea, retired president of the Pennsylvania Railroad, receiving the Franklin Medal in recognition of outstanding work in railway development.
3.—William Pat Boland, champion boy corn grower of the South, holding the $2000 cup presented for the best ten ears.
4.—One of the entries at the Wynnewood Dog and Pony Show, which was held May 14, 1926.
5.—A famous cave temple in Dambulla, Ceylon, India, used as a fortress during the first century B. C. The colors used in the decorations have lost little of their brilliancy during the centuries.
6.—Traffic congestion during the general strike in England.
7.—The "Summer White House," on the shore of Lake Osgood, New York, which will be occupied by President and Mrs. Coolidge during the summer.
8.—An unusual sketch of lava rising from Mauna Loa, a great Hawaiian volcano.

Summary of Sewing Hints

A Variety of Ideas Taken from Contest Letters

JUST as in all contests, we find ourselves wishing that space would permit the printing of each letter sent in during the sewing contest which closed last week. We are reserving some of the most valuable letters on hand for use as soon as possible.

Our family has been generous in praise of the help suggested by the sewing hints already published and we feel sure that you will find much of interest in the following summary of ideas which have not appeared before.

Remodeling

Remodeling hints were frequently emphasized, and many of our sewers are wearing stylish ensembles fashioned from old suits with wide skirts of greater length than we see today. Many baby dresses and little boys' blouses have been made from good parts of father's shirts, the very same buttons and buttonholes being used. Badly worn woolen blankets make excellent fillers for baby's pads, and feed bags provide good covers, and are easily quilted to hold in shape. Feed bags were suggested also for girls' bloomers and mother's kitchen aprons. The dye pot helps out here in lending charm. Several women have found it an economy to buy unbleached muslin, dye it attractively, and make house dresses that wear longer than those of any other material. One writer said, "I save all I can at every turn, but find remodeling and Pennsylvania Farmer patterns my biggest saving of all." She sews for nine children.

Mending

There are many wise letters on mending, and several tell us to save strength and time by mending everything possible by machine. Mend a worn seamless sheet by splitting it down the center, join selvedge edges for new center and hem the new edges. To mend farm pants or overalls, rip the side seam and mend the weakest spot by machine. Then, using the back of a worn out pair, make a long patch to cover entire front from above knee to the cuff. Attach this piece on the outside and then sew up your seam. All done by machine, quickly and worth while.

Shirt collars wear out first, so turn them or make an entire new top. When the boys' or men's wool suits need mending or patching visit a tailor and for a few cents he will provide you with samples to match or nearly match your garment needing attention. Substitute a flashlight for your darning ball—'twill show up all the weak threads in your finest hose.

General Helps

Seek choice designs for kiddies' embroidery or applique from advertisements.

Why baste a hem when paper clips or pins are so much quicker?

Buy thread in dozen or half dozen lots, and never be caught unthreading the machine needle when the bobbin needs filling.

Have a pincushion fastened to arm of machine. Keep the scissors handy, too.

Use the long stitch of machine to do all your gathering or shirring. It will draw up just as you want it and very evenly, too.

Eyelets and ties are time savers on little girls' dresses for wringers cannot spoil them as they do buttons.

Nothing excels the safety razor for ripping.

Heavy tailor shears enable you to cut five or six thicknesses at one time.

Save time and thread by sewing many seams without stopping to separate each time.

Get the habit of using either milliners' or embroidery needles for hand sewing.

Use narrow hemmer in joining borders to curtains.

To sew in sleeves neatly, always hold the sleeve toward you.

In machine work, secure the ends well by retracing at both the start and finish of each seam.

Discarded linen furniture covers make excellent dish towels.

Sewing with the long stitch makes easier ripping when make-over day comes.

Frequently tighten the machine belt, and oil frequently, too.

In all sewing frequent use of the hot iron is a fine habit.

Sewing over paper in making facings for flare skirts and round necks prevents stretching.—Editor.

Canning Asparagus

IN CANNING asparagus how should the stalks be cut and placed in the cans? How long are the cans processed? I will be grateful for any help you can give me.—Mrs. C. L.

Gather the tips in the very early morning, then prepare them quickly by thoro washings and scraping if necessary. Sorting is not necessary, but since tips vary in length, size and shape, it is often a real economy. Tips of uniform size are easily handled if tied in bunches to fit the jars. Place them in cheesecloth and dip into boiling water to blanch for four minutes. All pieces that have been cut in fitting the length of above bunches are then cut into inch lengths and canned separately for soups and for serving with toast. These pieces are blanched four minutes also.

Immediately after the blanching, either style is drained and placed in hot sterilized jars as speedily as possible. The jars are then filled to overflowing with boiling water to which salt has been added—one tablespoon to one quart of water. Half seal and place in process bath. From two to three hours boiling are needed in water bath, according to size of tips. Using steam process canner under ten pounds pressure, thirty to forty minutes, are required. —Home Page Editor.

Commencement Trips

WHAT an education the trip taken by many graduating classes of today furnishes, and what a pity it was not thought of years ago.

Tonight the senior class of our high school gives a chicken pie supper to help defray the expenses of the proposed Washington trip and we are all going to help all we can. Tho considerable expense is involved, many of these graduates would never in their lives visit the Capitol of our country thru any other agency and anything really worth while costs, either in labor and effort or in dollars and cents. This trip will be the outstanding red letter event of their school life, perhaps of their entire life.

So I say that it is gloriously worth while to bend every energy to help secure such a trip. If the plan has not reached your community start it without delay. If it is a feature, give it your hearty support. Nothing pays better than investments in the young folks.—Mrs. E. M. Anderson, N. Y.

Oven Canning Is Successful

(Continued from last week)

FOOD is prepared for the oven just as for cold pack canning, simply putting jars into the oven instead of into canner. Use sound, barely ripe, firm fruits. Wash thoroly in a wire basket under running water, or dipping into several waters, to remove every speck of dirt clinging to it, and wash off objectionable bacteria.

Fruit is stemmed, pitted, pared or cut to prepare for cans, then packed and covered with boiling syrup and put into the oven soon. For economy of jars, I use a fairly rich syrup, and pack fruit closely, without crushing. Syrup of equal parts sugar and water, or two parts sugar to one of water, is used for medium or sour fruits, while a very sweet fruit may take syrup made using one part sugar to two of water, boiling it three minutes.

The jars are washed well, scalded, heavy new rubbers scalded, then tested, by fitting with lids, clamping tight, or screwing down lids and inverting with a cupful of water inside. These empty tested jars are then sterilized in the steamer fifteen minutes with water boiling hard. This is easier than taking them out of a pan of water. Hot jars are packed with fruit, covered with boiling syrup, paddled to let out air bubbles, half sealed. The seal is completed upon removal from oven. When cold, do not disturb the seal by trying to screw tighter. Label, store in cool dry place. A warm moist cellar causes spoilage of the rubbers.

Blackberries, clean, sound, ripe and perfect, are packed into tested jars, shaken down gently as you pack, covered with boiling syrup, processed at 250 degrees one hour. The same time period is used for currants, dewberries, gooseberries, blueberries, huckleberries, loganberries and grapes.

So They Won't Darken

Peaches, pears, plums and apricots in a wire basket are dipped into boiling water long enough to loosen the skins so that they will slip off in cold water. Pack as you peel, covering with syrup quickly, lest they turn dark. They may stand in water with lemon juice in it, until ready to pack jars. These, and pineapple, quartered and sliced apples and cherries are processed one hour at 275 degrees.

Sliced apples may be dropped into salt water (one teaspoon to a gallon) which keeps them from discoloring, and conserves vitamin C content, by drawing out the oxygen before cooking. Whole apples may be dropped into boiling syrup and boiled ten minutes to shrink before processing fifty minutes at 250 degrees.

If plums are not peeled, they should be pricked several places with a fork to prevent bursting. Rhubarb may be baked with one-fourth its measure of sugar, for half an hour, before packing and processing half an hour at 250 degrees. If not pre-cooked, leave in the oven an hour.

Tomatoes Cut or Whole

Tomatoes cut, heated, boiled three minutes, packed hot, are processed only half an hour at 250 degrees. Cut and packed raw, processed half an hour at 275; whole and raw, an hour at 300 degrees. The size of pieces, and whether packed hot or cold affects time. Extra large pieces or hard fruits may be processed a few extra minutes. Hard pears may be pre-cooked. The tender young fruits are graded and packed in separate jars.

Strained grape juice is bottled, corked, processed forty minutes at 250 degrees, corks pushed in tightly, dipped several times in melted paraffin. Preserves may be cooked in the oven, then after packing, processed half an hour at 275 degrees. Fruit butters require less water, since they evaporate slowly in the oven.

Strawberries will all float on top of the jars, unless you let them stand overnight in their juices to plump before packing. Mix with one-fourth as much sugar as berries, let stand until juices are drawn out, boil three minutes, cover, cool quickly by setting kettle into cold water, or else pour into shallow trays. Next morning pack, fill with the heated syrup, process fifty minutes at 250 degrees.—Doris W. McCray.

Pin Money from Flowers

HERE are just a few helps for the beginner who would like to make a little money with flowers this year. There is such demand for strong plants that I use this method of adding to my income. The following rules should be used:

Spade your soil the day before wishing to plant seeds.

Next day rake it smooth and fine. Carefully mark off the rows, and sow the seeds.

At the end of each row place the markers.

Build a frame of boards around the entire seed-bed.

Cover with glass or glass cloth, which should be carefully framed.

Moisten daily, preferably after three o'clock.

After the plants are up nicely, give them a daily airing during the noon hour by lifting the glass frame on one side.

In removing the plants to fill orders, leave a small ball of dirt on each root. My best sellers are aster, pansy, and balsam plants.—Mrs. Eugene Williams, N. Y.

Can You Help?

HAS any reader had success with hyacinths a second year? I have three different shades potted together. Would it be best to separate them, and should they be kept in soil thru the summer? Our Home Page is greatly enjoyed in our home and I express gratitude now for any information concerning the hyacinths which readers can give me.—E. B. M., Md.

Roses the Year 'Round

Begin Now if You Want Blossoms Next Winter

MANY of us have tried and failed to make roses bloom in the house during the winter, but some people do succeed with the plants. Do not wait until next fall to procure the plants, however, if you expect to have success. Get the plants in the spring and set them in three-inch pots. Place them in a warm sunny situation and help them make a good root system.

Early in June transplant them to four-inch pots and plunge to the rim of the pots in a sunny place in the garden. Mulch with coarse manure and every week or ten days, turn the pots around. This is to keep them from extending the roots out of the pot thru the bottom and rooting in the outside soil. If buds appear, remove them at once.

This method may be kept up until the first of September, when the plants should be removed to larger pots. Trim the roots, if necessary, altho this will not need to be done if the pots have been turned regularly in the soil. Plants desired for late bloom may be left in the ground until the weather becomes quite cold but be sure they do not put out buds.

Watch Out for the Enemies

Plants treated in this way should give satisfactory bloom if the green fly and red spider are kept in check, as roses are very subject to these attacks when grown indoors. A temperature of about fifty degrees is best for roses. Applications of weak liquid manure will help to force them into bloom.

Roses which have bloomed during the winter should be turned out of the pots and the roots trimmed, then re-potted in three-inch pots again. The tops will also have to be cut back considerably. Treat the same the second year and you can continue with the same plants for a number of years.

The tea roses are best adapted to indoor culture. It is difficult to give a list of kinds which succeed best, as some plants do not seem to grow, while others of the same variety do well. Anyone who wishes to try out this method should procure a good rose catalog and select the kinds recommended for indoor culture. We prefer the kinds grown on their own roots rather than the budded or grafted stock and the two-year size will be the most likely to bloom. In addition to the hybrid teas, the Bourbon and Bengal roses will often do well in the window garden.—C. H. Chesley.

Preserve Eggs Now

THE following method of preserving eggs in water glass is given by the Cornell Poultry Division. Mix 1½ quarts commercial water glass with 18 quarts of boiled water that has cooled. Stir until thoroly mixed. An earthen jar is the very best vessel for the purpose. Two eight gallon jars will hold 30 dozen eggs, using the quantity of solution described above.

Be sure your jars are absolutely clean, and the water glass well dissolved. If this amount does not entirely cover the eggs, as much as five quarts of additional water may be safely added to this recipe.

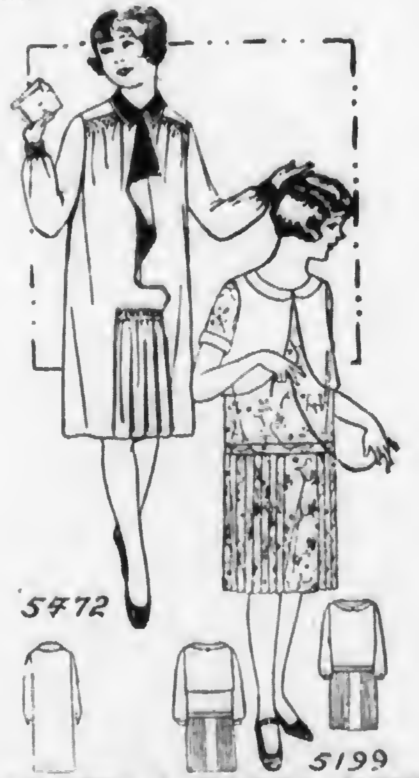
Who Can Give the Answer?

Is castor oil good for ferns? If so, just how should it be given?—An Interested Reader from New Jersey.

Whether Vacationing or Home

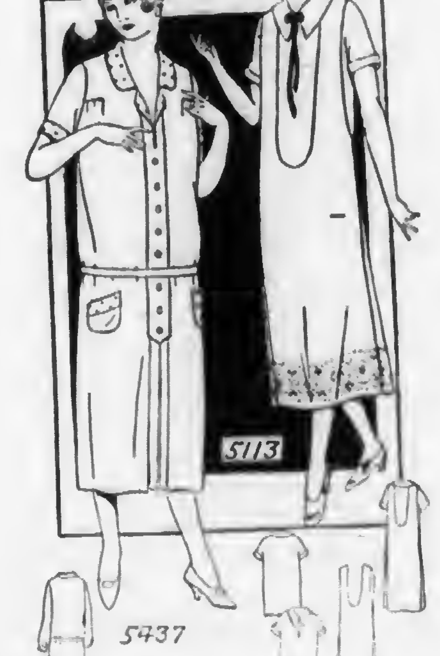
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5472.—A Pretty Frock.—Crepe in a light shade is here combined with taffeta in a darker shade. This style is good also for voile and tub silk. Four sizes: 8, 10, 12 and 14 years. A 10-year size requires 3 yards of 40-inch material together with ¼ yard of contrasting material for facing on collar, cuffs and jabot. Pattern, 10 cents.



5199.—With a Distinctive Feature.—This model may be finished with the bolero, a new and pleasing style feature. Four sizes: 6, 8, 10 and 12 years. An 8-year size requires 3¼ yards of 32-inch figured material and ⅝ yard of plain material if made as illustrated in the large view. Without the bolero ¼ yard of plain material is required. Pattern, 10 cents.

5437.—For Summer.—This is a good model for linen, cotton or silk broadcloth or gingham. The dress closes in front under the facing. The sleeve may be short or wrist length. Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. If made as illustrated in the large view, a 42-inch size will require 4⅜ yards of 36-inch plain material and ⅝ yard of contrasting material for facings on collar, revers, cuffs and pocket. If made with long sleeves 4½ yards of the plain material will be required. Pattern, 10 cents.



5113.—With Youthful Lines.—One of the leading styles of the season. It is an ideal warm weather dress. Linen, bordered with embroidery was used for the dress. Three sizes: 16, 18 and 20 years. An 18-year size requires 3¼ yards of 40-inch material for the dress, and 1⅝ yard for the blouse. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

"Keeping the Family Together"

KEEPING THE FAMILY TOGETHER doesn't mean keeping the family home every night.

Home is a great place to come back to, as any woman can tell any man, or any youngster tell any parents.

The family that knows enough to go to great photoplays together has learned one of the secrets of lasting family happiness.

Paramount Pictures provide many a family with just the kind of healthy excitement that makes every family better company.

Keep going!—that's what keeps a family together! Keep going wherever the showword is Paramount!

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his comrade, Private Pelletier, sick almost to madness from loneliness. Leaving the sick man MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." A few hours before the box had held the murderer, Scottie Deane.

Soon a party in search of Scottie Deane appeared. One was Bucky Smith, who hated Billy. Tired out the party rested but Billy struck the trail made by Deane. To save the murderer and his wife Billy knew that he must keep them out of the hands of Smith and to do that he would have to make them his own prisoners. The capture was easy. Bucky and his party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

A false story of Jim Blake's sent Pelletier on a search which ended abruptly when he found a baby, Little Mystery, in a nearby igloo. After MacVeigh's return, Eskimos—the dangerous Kogmollocks—came for the child and to save her the men fled. In flight they met Scottie Deane, father of the child. Next day, after the death of Deane, MacVeigh struck south taking Little Mystery to Pierre Croisset's cabin where Isobel Deane awaited her husband. Sick with fever she blames Billy with her husband's death. By morning smallpox had developed and in fear of "the plague" Pierre and his wife deserted. At Billy's insistence that they stay, Pierre knocks him unconscious and leaves in haste.

(Continued from last week)

IN ISOBEL'S voice, low and moaning, Billy recognized some of Pelletier's madness. It was the fever. He fell back a step and drew a hand across his forehead. It was damp—clammy with a cold perspiration. He felt a burning pain where he had been struck, and a momentary dizziness made him stagger. Then, with a tremendous effort, he drew himself together and turned to the little girl. As he carried her out thru the door into the fresh air, Isobel's feverish words still followed him:

"It was you—you—you—you!"

The cold air did him good, and he hurried toward the tent with baby Isobel. As he deposited her among the blankets and bear skins the hopelessness of his position impressed itself swiftly upon him. The child could not remain in the cabin, and yet she would not be immune from danger in the tent, for he would have to spend a part of his time with her. He shuddered as he thought of what it might mean.

For himself he had no fear of the dread disease that had stricken Isobel. He had run the risk of contagion several times before and had remained unscathed, but his soul trembled with fear as he looked into little Isobel's bright blue eyes and tenderly caressed the soft curls about her face. If Croisset and his wife had only taken her! At thought of them he sprang suddenly to his feet.

"Looky, little one—you've got to stay here!" he commanded. "Understand? I'm going to pin down the tent-flap, and you mustn't cry. If I don't get that damned half-breed, dead or alive, my name ain't Billy MacVeigh!"

He fastened the tent flap so that Isobel could not escape, and left her alone, quiet and wondering. Solitude did not frighten her, and, listening with his ear close to the canvas, Billy soon heard her playing with the armful of things he had scattered about her. He hurried to the dogs and harnessed them to the sledge. Croisset and his wife did not have over half an hour the start of him—three-quarters at the most. He would run the race of his life for an hour or two, overtake them and bring them back at the point of his revolver. If there had to be a fight, he would fight.

WHERE the trail struck into the forest he hesitated, wondering if he would not make better speed by leaving the team and the sledge behind. The excited actions of the dogs decided him. They were sniffing at the scent left in the snow by the rival huskies, and were waiting eagerly for the command to pursue. Billy snapped his whip over their heads.

"You want a fight, do you boys?" he cried. "So do I. Get on with you! M'hoosh! m'hoosh!"

Billy dropped upon his knees on the sledge as the dogs leaped ahead. They needed no guidance, but followed swiftly in Croisset's trail. Five minutes later they broke into thin timber, and then came out into a narrow plain, dotted with stunted scrub, thru which ran the Beaver. Here the snow was soft and drifted, and Billy ran behind, hanging to the tail-rope to keep the sledge from leaving him if the dogs should develop an unexpected spurt.

He could see that Croisset was exerting every effort to place distance between himself and the plague-stricken cabin, and it suddenly struck Billy that something besides fear of le mort rouge was adding speed to his heels. It was evident that the half-breed was spurred on by the thought of the blow he had struck in the cabin. Possibly he believed that he was a murderer, and Billy smiled as he observed where Croisset had whipped his dogs at a run thru the soft drifts. He brought his own team down to a walk, convinced that the half-breed had lost his head, and that he would bush himself and his dogs within a few miles. He was confident now that he would overtake them somewhere on the plain.

With the elation of this thought there came again the sudden, sickening pain in his head. It was over in an instant, but in that moment the snow had turned black, and he had flung out his arms to keep himself from falling. The babiche rope had slipped from his hand, and when things cleared before his eyes again the sledge was twenty yards ahead of him. He overtook it and dropped upon it, panting as tho he had run a race. He laughed as he recovered himself, and looked over the gray backs of the tugging dogs, but in the same breath the laugh was cut short on his lips.

It was as if a knife-blade had run in one lightning thrust from the back of his neck to his brain, and he fell forward on his face with a cry of pain. After all, Croisset's blow had done the work. He realized that and made an effort to call the dogs to a stop. For five minutes they went on, unheeding the half dozen weak commands that he called out from the darkness that had fallen thickly about him. When at last he pulled himself up from his face, and the snow turned white again, the dogs had halted. They were tangled in their traces, and sniffing at the snow.

Billy sat up. Darkness and pain left him as swiftly as they had come. He saw Croisset's trail ahead. And then he looked at the dogs. They had swung at right angles to the sledge, and had pulled the nose of it deep into a drift. With a sharp cry of command he sent the lash of his whip among them, and went to the leader's head. The dogs slunk to their bellies, snarling at him.

"What the devil—" he began and stopped.

He stared at the snow. Straight out from Croisset's trail there ran another—a snow shoe trail. For a moment he thought that Croisset or his wife had for some reason struck out a distance from their sledge. A second glance assured him that in this supposition he was wrong. Both the half-breed and his wife wore the long, narrow "bush" snow-shoes, and this second trail was made by the big, basket-shaped shoes worn by Indians and trappers on the barrens. In addition to this, the trail was well-beaten. Whoever had traveled it recently had gone over it many times before, and Billy gave utterance to his joy in a low cry. He had struck a trap-line.

The trapper's cabin could not be far away, and the trapper himself had passed that way not many minutes since. He examined the two trails, and found where the blunt, round point of a snow-shoe had covered an imprint left by Croisset; and at this discovery Billy made a megaphone of his mittened hands and gave utterance to the long, wailing halloo of the forest-man. It was a cry that would carry a mile. Twice he shouted and the second time there came a reply. It was not far distant, and he responded with a third and still louder shout. In a flash there came again the terrible pain in his head, and he sank down on the sledge.

THIS time he was roused from his stupor by the barking and snarling of the dogs and a man's voice. When he lifted his head out of his arms he saw some one close to the dogs. He made an effort to rise and staggered half to his feet. Then he fell back, and the darkness closed in about him more thickly than before. When he opened his eyes again he was in a cabin. He was conscious of warmth. The first sound that he heard was the crackling of a fire and the closing of a stove door. And then he heard some one say:

"S'elp me God, if it ain't Billy MacVeigh!"

He stared up into the face that was looking down at him. It was a white man's face, covered with a scrubby, red beard. The beard was new, but the eyes and the voice he would have recognized anywhere. For two years he had messed with "Rookie" McTabb down at Norway and Nelson House. McTabb had quit the service because of a bad leg.

"Rookie!" he gasped.

He drew himself up, and McTabb's hands grasped his shoulders.

"S'elp me, if it ain't Billy MacVeigh!" he exclaimed again, amazement in his voice and face. "Joe brought you in five minutes ago and I ain't had a straight squint at you until now. Billy MacVeigh! Well, I'm—" He stopped to stare at Billy's forehead, where there was a stain of blood. "Hurt?" he demanded sharply. "Was it that damned half-breed?"

BILLY was gripping his hands now. Over near the stove, still kneeling before the closed door, he saw the dark face of an Indian turned toward him.

"It was Croisset," he said. "He hit me with the butt of his whip and I've had funny spells ever since. Before I have another I want to tell you what I'm up against, Rookie. My Gawd, it's a funny chance that ran me up against you just in time! Listen."

He told McTabb briefly of Scottie Deane's death, of Croisset's flight from the cabin, and the present situation there.

"There isn't a minute to lose," he finished, tightening his hold on McTabb's hand. "There's th' kid and the mother, and I've got to get back to them, Rookie. The rest is up to you. We've got to get a woman. If we don't soon—"

He rose to his feet and stood there, looking at McTabb. The other nodded.

"I understand," he said. "You're in a bad fix, Billy. It's two hundred miles to the nearest white woman, away over near Du Brochet. You couldn't get an Indian to go within half a mile of a cabin that's struck by the plague, and I doubt if this white woman would come. The only game I can see is to send to Fort Churchill or Nelson House and have the force send up a nurse. It will take two weeks."

Billy gave a gesture of despair. Indian Joe had listened attentively, and now rose quietly from his position in front of the stove.

"There's Indian camp over on Arrow Lake," he said, facing Billy. "I know squaw there who not afraid of plague."

"Sure as fate!" cried McTabb exultingly. "Joe's mother is over there, and if there is anything on earth she won't do for Joe, I can't guess what it is. Early this winter she came a hundred and fifty miles—alone—to pay him a visit. She'll come. Go after her, Joe. I'll go Billy MacVeigh's bond to get the service to pay her five dollars a day from the hour she starts!" He turned to Billy: "How's your head?" he asked.

"Better. It was the run that fixed me, I guess."

"Then we'll go over to Croisset's cabin and I'll bring back the kid."

They left Joe preparing for his three-day trip into the south and east, and outside the cabin McTabb insisted on Billy riding behind the dogs. They struck back for Croisset's trail, and when they came to it McTabb laughed.

"I'll bet they're running like rabbits," he said. "What in thunder did you expect to do if you caught 'em, Billy? Drag the woman back by the hair of 'er 'ead? I'm glad you tumbled where you did. You've got to beat a lynx to beat Croisset. He'd have perforated you from behind a snowdrift—sure as your name's Billy MacVeigh."

Billy felt that an immense load had been lifted from him, and he was partly inclined to tell his companion more about Isobel and himself. This, however, he did not do. As McTabb strode ahead, and urged on the dogs, he figured on the chances of Joe and his mother returning within a week. During that time he would be alone with Isobel, and in spite of the horrible fear that never for a moment left his heart, it was impossible for him not to feel a thrill of pleasure at the thought. Those would be days of agony for himself as well as for her, and yet he would be near, always near, the woman he loved. And little Isobel would be safe in Rookie's cabin. If anything happened—

(To be continued next week)

News and Notes

KING ARTHUR liked beef. One day his favorite cut of meat tasted so good that he arose from the dinner table, drew his sword and, in the manner employed by kings when they make their favorites knights, he dubbed the piece of meat "Sir Loin." And that, if we may believe tradition, is the way sirloin steak got its name.

* * *

One of the notable buildings at the Sesqui-Centennial Exposition in Philadelphia is a full-size reproduction of the famous Taj Mahal, considered by many the most beautiful building in the world. This white marble mausoleum was built by the Mogul Emperor Shah Jahn, at Agra, India, in memory of his favorite wife. Shah Jahn lived from 1628 to 1658 A. D.

* * *

Lumber for four new houses in Harrisburg was sawed out of timbers taken from the old covered bridge across the Susquehanna at Clark's Ferry. This bridge was built just 100 years ago. It was replaced last year by a modern concrete structure. Two million feet of lumber, sawed at Lock Haven, went into the construction of the old landmark, according to C. R. Anderson, of the Pennsylvania State College.

* * *

Pennsylvania farmers who have traveled the Susquehanna Trail north of Harrisburg will remember the Clark's Ferry bridge was very long, but was not wide enough for two lines of traffic. Turning out places were provided at frequent intervals so vehicles could pass. They reminded the traveler of similar passing places on some of our narrow mountain roads.

* * *

In 1845 a group of Englishmen set out in two ships to try to find their way across the Arctic Ocean to the north of the American Continent. They were never heard of again. Thirty-nine expeditions were sent out to search for them without success, altho one of the searching parties found some tins of canned beef that had been carried by the lost explorers. One of those tins was opened a few weeks ago. The 81-year-old meat seemed to be in as good condition as when it was packed.

During the winter months sixty-five theatres are open every day in New York City. This does not include the thousands of motion picture houses in the city.

More Profits for Orchardists

YOU can practically double the value of your apple crop—*if you convert your sound undergrades into cider.* Successful orchardists—in every section of the country—now take advantage of the popular demand for refined apple juice to realize extra profits from every crop their trees yield.

Mount Gilead
HYDRAULIC CIDER PRESSES
—FAMOUS FOR FIFTY YEARS

Are helping these progressive fruit growers to increase their incomes. These quality built machines are made in varying sizes, including roadside, orchard and custom presses. Whether you have a small or large acreage in trees—whether you handle only your own fruit—or do custom pressing for a large community, there is a Mount Gilead Press for you. And these truly superior presses can be depended upon to extract every available ounce of juice from your fruits—and to change your undergrades into cider that sells at top prices.

The Mount Gilead Process

Developed as a logical sequence to fifty years of building cider presses, the Mount Gilead Process of refining fruit juices produces a clear, sparkling juice that remains sweet for years. No preservatives or other adulterations are used and it complies with every requirement of the Federal Prohibition Regulations.

Write us today for free copy of our book, "A Golden Harvest from Undergrade Apples." Completely describes and illustrates the full line of Mount Gilead Presses and the Mount Gilead Process.

THE HYDRAULIC PRESS MFG. CO.
Originators of the Hydraulic Cider Press
805 LINCOLN AVE. MOUNT GILEAD, O.

The most complete line of machinery for fruit products plants, including cider presses for every need.

Thresh Clean and Fast
Make Money With a
FARQUHAR

Thousands have made money with a Farquhar Threshing Rig. You can do likewise if you go after business with a Farquhar clean and fast threshing rig.

Built in sizes for tractor or steam power—for individual or custom work.

Let us mail you Bulletin showing the many superior and convenient points of the Farquhar line of threshers. Write today.

If you have a tractor, send for the Farquhar Junior Bulletin and our Bulletins on Sawmills, Hay Balers and Cider Presses.

RADISHES, Miss, doz, 10@20c. SPINACH, Md, bu bskt, 75c@$1. SWEET POTATOES, La and Tenn, bu hmpr, yellow, $2.50. TOMATOES, Fla, 6-bskt crate, fancy, $5.50@6; poor, $4.50; choice, best, $4.50@5; poor $3.50; Texas, 4-bskt crate, $2@2.25.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)....	$ .40¾	$ .41½	$ .39	$ .43
Eggs, fresh gathered extra firsts (N. Y.)....	.32½	.32⅛	.30½	.33¼
Potatoes, 150-lb sacks (Philadelphia)........	3.50	5.00	8.37½	1.95
Steers, good to choice (Lancaster)...........	...	9.00	9.00	9.58½
Hay, Number 2 timothy, baled (Phila.).....	26.50	26.50	21.50	18.50
Wheat, No. 2 red winter (Philadelphia).....	1.60½	1.73½	1.78¾	1.89½
Corn, No. 2 yellow (Philadelphia)...........	.74	.75¼	.77¾	1.32½
Oats, Number 2 white (Philadelphia)........	.51¼	.52	.52	.60½

Fruits—APPLES, bbl, N Y, Baldwins, $4@4.75; Russets, $4.50@5; bu bskt, N Y, Baldwins, $1.50@1.75; poor, $1. CANTALOUPES, Calif, crate, jumbos, $3.50@3.75; standards, $3.25@3.50; ponys, $2.25@2.50; flats, $1.25@1.40. STRAWBERRIES, 24-qt crate, Arkansas, Missouri and Kentucky Aromas, $6.50@7.50; Virginia, 32-qt crate, best, $6@6.50; poor, $5.

LIVESTOCK

Cattle—Receipts 25; market slow and steady.

Hogs—Receipts, 1536; market steady. Heavy, $14@14.25; medium, $14.60@14.75; light weight, light lights and pigs, $14.75@15; packing sows, $11.50@12.50; stags, $7@8.

Sheep and Lambs—Receipts, 646; market steady. Sheep, $8.50; lambs, $15.50; spring lambs, $18.

Calves—Receipts, 285; market steady; choice natives, $14.

BALTIMORE PRODUCE

Eggs—Market firmer. On the Baltimore Butter and Egg Exchange, nearby current receipts, 2 sales, 55 cases, 30½c. Closing offerings, nearby current receipts, 30¾c, bid 30½c. Quotations: Current receipts, free cases, all sections, 30½c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 33@34c; 3½@4 lbs, 34c; Leghorns and other light stock, 30@32c; old roosters, 20c; young chickens, springers, 1¾ lbs and over, 50@52c; springers, small size, 42@45c; springers, White Leghorns, as to size, 35@45c. Ducks, White Pekins, 22@24c; Muscovys, young, 21@22c; puddle, 21@22c. Pigeons, young and old, 40c.

Butter—Creamery, fancy, 42½@43c; choice, 41½@42c; do, good, 40@41c; do, prints, 43@45c; do, blocks, 42@44c; do, ladles, 32@33c; Md and Penna, rolls, 28@32c; Ohio and W Va, rolls, 28@32c; store-packed, 28c; Md, Va and Penna, dairy prints, 28@32c; process butter, 35@36c.

NEW YORK MARKETS

May 29, 1926.

PRODUCE

Butter—Unsettled; receipts, 14,221 tubs; creamery, higher than extras, 41¼@42c; creamery, extras, 92 score, 40¾@41c; creamery firsts, 88@91 score, 38@40½c; packing stock, current make, No 2, 27c.

Eggs—Firm; receipts, 22,155 cases; fresh gathered extra firsts, 32@33c; do, storage packed, 33¼@34½c; fresh gathered firsts, 30½@31½c; do, storage packed, 32@33c; fresh gathered, seconds, 28½@29½c; do, storage packed, 30@31½c; nearby hennery whites, closely selected extras, 37@38c; nearby and nearby western hennery whites, firsts to average extras, 32@36c; nearby pullets, 30@31c; nearby hennery browns, extras, 37@39c; Pacific Coast whites, extras, 38½@39c; do, extra firsts, 36@37½c.

Cheese—Firm; receipts, 86,006 pounds; state, whole milk, flats, fresh, fancy to fancy specials, 20½@21¼c; do, average run, unquoted; state, whole milk, flats, held, fancy to fancy specials, 26@28c; do, average run, 25@26c.

Live Poultry weak; broilers, by freight, 35@45c; do, by express, 30@50c; fowls, by freight, 30@33c; do, by express, 31@34c; roosters, by freight, 18c.

Dressed Poultry irregular; chickens, fresh, 40@50c; do, frozen, 30@45c; fowls, fresh, 30@36c; do, frozen, 29@36c; old roosters, 18@23c; turkeys, fresh, 30@40c; do, frozen, 42@62c.

LIVESTOCK

Cattle—Receipts, 630 head; steady; steers, $7@10.25; state bulls, $4@6.50; cows, $2.50@5.50.

Calves—Receipts, 1270 head; firm; veals, common to prime, $6@16; culls and little calves, $6@8; grassers and fed calves, $5@7.50.

Sheep and Lambs—Receipts, 8060 head; firm; sheep, $3@8; culls, $2@3; lambs, Ohio, medium to prime, $11.50@16; state, common to prime, $10@16; culls, $7@10; springers, 65@70 lbs, $18.50 cwt.

Hogs—Receipts, 1990 head; steady; light to medium weights, $14.25@14.75; pigs, $15@15.25; heavy hogs, $13.75@14.25; roughs, $12@12.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment: City bran, $31.50; middlings, $30, in 100-lb sacks; red dog, $34, nominal, in 100-lb sacks; western spring bran, prompt shipment, $30; standard middlings, prompt shipment, $28.75; flour middlings, prompt shipment, $35; red dog, prompt shipment, $36, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.10, in 100-lb sacks, cottonseed meal, 36 per cent protein, $38.75; prompt shipment linseed oil meal, $51.30, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 2, $28@29; No 3, $25@27; sample, $10@20. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.81⅞; No 1 dark spring, c i f, domestic, $1.77⅝; No 2 hard winter, f o b, export, $1.83⅛; No 1 North Manitoba, in bond, f o b, export, $1.70½; No 2 mixed durum, f o b, export, $1.52⅞. CORN, No 2 yellow, 81⅞c; No 3 yellow, 82⅞c. OATS, No 2 white, 50½c; No 3 white, 49½c; No 4 white, 48c; ordinary white, clipped, 49½@51½c; fancy white, clipped, 52@54½c. RYE, c i f, export, $1.01¼. BARLEY, malting, c i f, domestic, 83¼@86¼c.

CHICAGO LIVESTOCK MARKET

Cattle—Fat steers and yearlings closing the week active, strong to 15c higher; heifers up to 25@40c for week; better grade fat cows and heifers up 25@40c for week; better grade fat cows and heifers fully 25c over late last week; best matured steers, $10; yearlings at that price; bulk fat steers, $8.65@9.75; market open but no local killing Monday; bulls weak today; most bolognas, $5.85@6.10; 50c lower for week; vealers steady, $11.50@13.50; few, $14.

Hogs—Uneven, 5@15c lower; majority 240@325-lb butchers, $13.60@13.95; bulk desirable 200@225-lb weights, $14@14.15; bulk better 180-lb down, $14.15@14.30; top, 140@155 lbs, $14.35; bulk packing sows, $12.20@12.40; selected killing pigs, $14@14.35; shippers took 5000 head; estimated holdover, 4000 head.

Sheep—Fat lambs, 25c higher; sheep, steady; Calif springers, $16.50@17.25; natives upward to $18.50; best clipped lambs, $16.75; choice fat ewes, $7.50.

WOOL MARKET

Boston, May 29, 1926.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 44c; ½-blood combing, 43c; ⅜-blood combing, 42@43c; fine unwashed, 38@40c. Michigan and N Y fleeces—Delaine, unwashed, 43c; ½-blood combing, 42c; ⅜-blood combing, 42@43c; ¼-blood combing, 41@42c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@42c; ⅜-blood 40@41c; ¼-blood, 39@40c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, May 28, 1926.

Cloverseed, cash, domestic, $21; imported, $17.50; October, $19.50; December, $16.25 bid. Alsike, cash, $17. Timothyseed, cash, $3.45; September, $3.67½ bid.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Saturday, May 29th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$30.00@30.50
Spring bran	29.75@30.00
Soft winter wheat bran	33.00@33.50
Hard winter wheat bran	30.00@31.00
Standard middlings	29.00
Soft winter wheat middlings	31.00@34.00
Flour middlings	33.00
Red dog flour	36.00@36.50
White hominy	30.50@31.20
Yellow hominy	30.50@32.20
Gluten feed	39.35
36 per cent cottonseed meal..	37.75@38.50
41 per cent cottonseed meal..	39.75@40.00
43 per cent cottonseed meal..	41.75@42.00
34 per cent linseed meal.....	50.20@50.25

Mill feed in ample supply with moderate demand.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Month's Price Trend

THE general average of prices of farm products decreased slightly during May, the Department of Agriculture index of farm prices being placed at 139, compared with 140 in April and March, and 146 for May a year ago. The five-year period, 1909-14 is used as a base of 100.

The price index for the meat animal group advanced 2 points during the month, grain prices remained unchanged, while other groups of farm products decreased from 1 to 13 points, the greatest decrease being in fruits and vegetables.

Farm prices of hogs increased from an average of $11.49 to $11.97 per 100 pounds from April 15 to May 15, reaching the highest point since last August. The advance is at a time of year when lower prices usually are expected. There has been a strong upward movement in the market price of hogs at central markets since early in April.

Sheep and Lambs Higher

Farm prices of beef cattle and veal calves were lower on May 15 than a month ago, whereas sheep and lamb prices were higher. Wool and butter prices continued downward; chicken and egg prices were higher. Corn prices were higher than for the previous month for the first time in nine months. Cotton prices decreased about 4 per cent, and potatoes fell off about 10 per cent from their exceedingly high April level.

The general level of farm prices is still about 12 per cent below the level of non-agricultural wholesale prices. In April non-agricultural prices turned downward while farm prices remained unchanged, resulting in a one-point increase in the relative purchasing power of farm products from 87 in March to 88 in April, compared with 90 in April and May a year ago.

Philadelphia Markets

THE first car of Georgia peaches of the season arrived on the Philadelphia market the morning of May 28 and sold at $2.50 to $4.00 per six-basket carrier. Most of the stock was small and green and sold slowly, according to the Pennsylvania and Federal Bureau of Markets.

Heavy offerings of peas from North Carolina and Virginia featured the wholesale produce market. This stock met an active demand at considerably lower prices. Telephone peas ranged from $1.00 to $2.00 per 5-peck hamper.

Motor truck receipts of strawberries from the Eastern Shore totaled approximately 4900 crates. The market was stronger, altho there was a wide range in prices due to the variation in quality and condition. Most sales of Virginia stock ranged from $4.00 to $5.00 per 32-quart crate.

Asparagus was in light supply and the market was slightly stronger on the better grades. There was a good demand with fancy Pennsylvania green grass selling at $4.80 to $6.00 per dozen bunches. The best New Jersey stock brought $3.60 to $4.80.

County News and Comment

Clarion County, Pa.—May weather not very good for vegetation. Cold winds prevail and frost continues to come from once to twice a week. Corn and potatoes about all planted, some coming up looking very yellow on account of cold weather, not much gardening done yet. The early cherries, peaches and plums are damaged considerably. Wheat and grass fields looking better since the recent rain but damaged by the drought the last four weeks. A lot of young chicks hatched this spring, the later hatch doing better than the early. Cattle turned on pasture as rough feed is getting scarce. Prices: creamery butter, 47c; country, 30c; eggs, 25c; potatoes, $3; oats, 55c; corn, 55c, ear; hay, $10.—C. R., May 20.

Dauphin County, Pa.—Recent rains and more seasonable temperatures have caused grass and grain fields to look fine. Grain is very short. Some corn yet to be planted. Acreage of potatoes will be less than last year. At present prospects for fruit are better than for a number of years. Prices: wheat, $1.60; corn, 70c; oats, 50c; hay, $19; eggs, 30c; butter, 60c. —I. F. M., May 22.

Fayette County, Pa.—Still a little oats to sow and some corn not planted. Some of the soil this year was very hard to get in condition for planting. It is very dry here and most all crops are affected by it. Oats not growing very well. Most of the meadows are very short. If dry weather continues hay crop will be short. Now very warm in day time but cool at night. Some of the farmers tried spring wheat this year and most of it is looking good. Most places the fruit crop has not been hurt so far. Not many apple blossoms this year.—E. H. V., May 17.

Lawrence County, Pa.—Planting all done except some few who insist on late planting of potatoes. Despite the fact that potatoes were unusually high in price, a large acreage has been planted. Ground very dry for plowing but harrowed up mellow and fine. Weather so far is not very conducive for growing. Cold high winds and lack of moisture. On the night of the 18th a heavy storm visited the northwestern corner of the county, doing much damage to growing crops, gardens, buildings and trees. Hail and heavy rain accompanied the wind. Several hard frosts early in the month. Cherry, plum and peach blossoms may have been damaged. No great showing of apple blossoms. Spring pigs scarce and high. Veal calves in great demand. Pasture short, cattle not looking as good as when turned out. Country butter, 45@50c; eggs, 38c; No. 1 wheat, $1.60; ear corn, 40c.—M. L. V., May 24.

Lebanon County, Pa.—Grass and wheat have been doing well in spite of the April and May drought. Oats and corn were kept from sprouting evenly by this lack of moisture. Plowing and harrowing were done with difficulty. Recently short rains have been followed by changes in temperature of 35 degrees. Apricot and cherry trees are loaded and other fruits look to be undamaged to date. Lot of baled hay being loaded today. Some cars of potatoes also shipped at $3. Dozens of cars of lumber also being loaded. The scale is very bad. All trees blossomed profusely. Potatoes coming out unevenly and tobacco plants backward. Asparagus, rhubarb and lettuce crops on time and fine. Many acres of woodland burned over. Several hundred farmers have planted corn distributed by banks thru agricultural extension office. Varieties are Sure Crop, Golden Queen and Bucher's Yellow Dent. In the past these varieties have done best here. The purpose of this free distribution of seed corn is to improve and standardize the corn crop. A judging team of three boys will be sent to State College during Young Farmers' Week. Winners in local contests will be chosen and their expenses paid by the Grange. Eggs, 26c; corn, 70c; butter, 55c; oats, 45c; old chickens, 28c; veal calves, 12c; hatching eggs, 36c and up.—R. I. W., May 24.

McKean County, Pa.—We are badly in need of rain, too dry to plow in most places. The nights are cold and frosty, causing a slow growth of vegetation. McKean County has six bull associations, and until a few weeks ago led all counties in the United States for bull associations in the number of dairy breeds. A Guernsey bull was bought recently whose sire won first prize at the National Dairy Show and his dam first at the Maryland State Fair. Cow testing association work is being pushed forward in the county. Forest fires have done considerable damage this spring. Prices: potatoes, $2; eggs, 30c; oats, 60c.—F. J. H., May 21.

Warren County, N. J.—We have had a very dry cold spring and all farm work is late. No rain during May until the 22nd when we had a nice shower but not enough to wet plow deep in sod. Fruit trees resembled flower pots but they didn't set well it has been so dry. Rye, wheat, oats and grass are short and do not promise a good harvest. Potatoes are in the ground. Acreage not so large as last year, the price being good last fall and seed high this spring. A lot of corn yet to plant but some that is up looks fairly good. Feed and grain prices remain about the same with butter and eggs advancing. Pigs scarce and six-week-old pigs bring $7 apiece.—A. S. P., May 23.

York County, Pa.—Weather still unseasonably cold. During early part of month it was very dry. During the past week or ten days we have had several rains and the southern end of the county was visited by a very severe hailstorm on May 19th. Many plowed fields were badly washed by the flood which accompanied the hail, making it necessary for a few farmers to plant their corn over. Grass fields not looking as good as usual at this time of year. Wheat is below normal, a good many fields having a poor stand due to winter killing. Fruit trees were loaded with blossoms and the prospects are good for a large crop of fruit. Prices: wheat, $1.60; corn, 75c; oats, 42c; eggs, 27c; old hens, 25@28c; young chickens, 32@45c; four per cent milk, $2.30.—W. K., May 26.

Feed Market Situation

FEED prices continued their downward trend during the week ending May 27 with wheat feeds very weak and linseed meal draggy. The urgent demand of recent weeks for spot feeds has practically disappeared and mills and resellers are offering adequate supplies for immediate use. Demand has become very light for most feeds, altho inquiry for chicken feed continues very good in many sections.

Production of wheat feeds and linseed meal continued light but the output of corn feeds continued of fair volume, according to trade reports. Light receipts of hay in eastern markets held hay prices practically steady. The oats market worked fractionally lower but light receipts of corn forced prices slightly higher at the close of the week.

Wheat feeds were again sharply lower. Demand was only fair. The heavier feeds were draggy in eastern territory but middlings at Minneapolis were relatively steadier than bran, and demand was fair for shorts at Kansas City.

Linseed meal was barely steady in eastern markets following the previous decline but buyers seemed inclined to hold off. Production of this feed continued light at Minneapolis and Chicago but prices worked lower at these markets.

Corn feeds were barely steady to lower. Quotations on gluten feed were unchanged and production continued of good volume, according to current reports, but the undertone was easier and resellers were pressing sales in eastern markets. Hominy feed was generally lower. Offerings were ample at Chicago but buyers were bidding $1 under current quotations and demand was not active. Offerings of yellow hominy feed were very small but white hominy feed was plentiful.

Scanty offerings of alfalfa meal held prices about firm but buyers were generally awaiting new crop quotations, which were expected to be materially lower than present prices. Stocks of this feed are running very low but new meal is expected on the market early in June. —United States Bureau of Agricultural Economics.

Electricity at Locust Lane

(Continued from page 3)

The rate for electric power is five cents per kilowatt hour, with a discount for prompt payment which brings the net cost down to 4½ cents. For lighting and operating the smaller machines connected with the light circuit the net cost is 10 cents per kilowatt hour. Altho Mr. Brubaker does much of his work with electricity, he uses other kinds of power where they seem better adapted to a particular need. He has two tractors, a truck and three exceptionally fine teams of mules.

The smaller tractor is used for harrowing, running the grain binder and doing similar tasks. The larger tractor, which is an old one and has seen much service, is kept for just one purpose,—to plow sweet clover sod. When you remember what a heavy sweet clover sod is like, and when you know that Mr. Brubaker plows eight inches deep, you see that he is justified in keeping this heavy old model tractor for this job.

Other equipment we have not mentioned includes a side delivery rake, hay loader, potato digger run by a small gasoline engine, an electrically driven potato grader, etc., etc. A complete inventory of the mechanical helpers on Locust Lane Farm would look like the index in a farm machinery catalog.

The farm is well equipped with water systems. Besides two electric pressure systems there is a pump operated by water power. When the water wheel stops pumping in dry weather the electric pump in the basement of the house goes into action. The other electric pump supplies water for spraying potatoes. It also forces water thru temporary pipes laid on top of the ground to the hog troughs out in the fields.

A Good Business Man, Too

It goes without saying that Mr. Levi Brubaker is a very good farmer. But he is also a very good business man. He made his farm produce all the money he has spent for machinery and electrical devices. More important, however, is the fact that he knows what he is doing. He uses as much care in planning new ways to use machinery as he does in laying out his crop rotations.

Mr. Brubaker believes that the lead pencil is the most important farm implement. He uses it constantly. It tells him which crops are profitable, how many men he should hire, what equipment he can afford, and which machines he cannot afford to be without.

It was the lead pencil that put modern machinery and electric power on Locust Lane Farm, just as it was the lead pencil that put in Mrs. Brubaker's kitchen the many labor savers Mrs. Harrington described in her article week before last.

The home on Locust Lane Farm just after a midwinter snowstorm.

Prices and Prospects

THE New York egg market showed a steady to firm tone thruout the week May 19-26th. All grades were firmer at the close of the week and buying was more active. The Philadelphia egg market ruled generally steady and receipts were liberal, totaling 50,520 cases. Of this number Pennsylvania supplied 3433.

The live poultry market in New York was irregular but there was a better tone toward the close, and the market strengthened. Dressed poultry was slow during the early part of the week but improved slightly at the close.

The hay market held steady under light receipts during the week ending May 22nd. Farm stocks are reported to be light and country marketings were limited. Good hay was scarce and in demand and timothy held generally firm.

Grain Market Unsettled

The grain market was in an unsettled condition. The prospective early movement of winter wheat from the Southwest weakened the wheat market but corn held firm under a fairly active demand. Oats were dull but the rye market was firmer due to a better export demand.

Old potato prices thruout the week have declined steadily. A May rise, such as occurred in 1920, does not seem to be probable. Shipments are still running around 2200 cars a week or nearly as heavy as last season. Maine is shipping about 700 cars weekly. The 166,400 cars shipped up to May 22 from the leading main crop states lacks but 11,000 cars of equaling last season's output up to May 23rd. The markets were dull with a weaker tendency at the close of the week. The mid-season potato crop is likely to be lighter than last year.—W. R. Whitacre.

Produce for Wilkes-Barre

THERE were 840 fewer carloads of perishable produce unloaded in Wilkes-Barre in 1925 than in 1924, according to a report recently issued by the Pennsylvania Bureau of Markets. The railroad records of the city show that 3182 cars of fresh fruits and vegetables were received in Wilkes-Barre during the past year as compared to 4022 cars in 1924. The greatest decrease, due principally to the coal strike, occurred during the last four months of the year.

Pennsylvania supplied 137 cars of potatoes, which is 48 per cent of all the late potatoes used, while in 1924 only 38 per cent of the late potatoes was shipped to Wilkes-Barre from points in the state.

Seven per cent of the apples arriving in carlots were of Pennsylvania origin as compared to 5 per cent of Pennsylvania stock brought in during 1924.

Sheep Owners Protected

SOMETIME ago John Coyne, shepherd at the Pennsylvania State College, killed a dog which he alleged was worrying the sheep under his care. He was taken before a justice of the peace who found him guilty on several charges, one of which was the removal of the collar and license tag of the dog which he shot. Judge Keller, of Centre County, however, ruled that Coyne was within his rights in killing the dog and removing the collar as the killing took place on the farm land owned by the college.

This decision was welcomed by sheep growers for it gives them additional protection in the care of their flocks. This was one of the first suits of its kind in the central part of the state.—A. L. B.

Riverside OVERSIZE CORDS BALLOONS **Tires** & TUBES

$9.49 30 x 3½ OVERSIZE CORDS FOR FORDS
Inner Tubes $2.38
All sizes at equally low prices

A definite mileage Guarantee Backed by a 54 year old Company

If you *could* buy a better tire value, if you *could* get extra quality for an extra price—that would be a different thing.

But when we put a 54 year old guarantee back of Riverside tires, when we guarantee them to give you the last possible yard of mileage, paying an extra price is only extravagance.

When we guarantee our oversize cords for 12,000 miles—our balloons for 10,000 miles—made with new live rubber, designed to prevent skidding—what better tire value can you get at a higher price?

If you pay one-third more, what do you get for the extra money? You get no longer mileage, no better service, no better guarantee of satisfaction. So why pay more?

We never sacrifice quality to make a low price

The market is being flooded with low priced tires specially made to meet Riverside prices but not to meet Riverside quality.

Many of these low priced tires are made of "rubber composition" and contain so little new, live rubber that they cannot possibly give satisfactory mileage. Riverside Tires are absolutely guaranteed and are the biggest tire value you can possibly buy.

Rain Proof

Try to Wet It!

Impossible! Fill it full of water till it overflows the brim. Another hat would be ruined. But water cannot harm this new kind of harvest hat. It holds its shape through rain and wind and wear.

KOKO-KOOLER is an entirely new and different kind of harvest hat—cooler, lighter and far more durable.

This hat is hand woven from special *Bamboo Bark*, tough, wiry and yet as soft and flexible as a $10 panama. It is as light as a feather—weighs but little more than a handkerchief. It will give you cool comfort on the hottest days.

This amazing hat is also instantly adjustable. Just loosen the patented buckle and wear it "free and easy" on the hottest days. Tighten the buckle for snug fit on windy days.

Broad brimmed, durable, light as a feather, and rain proof—your dealer has it or will get one for you at the low price of 75c. Slightly higher in the West. Look for the name inside the hat. If your dealer can't supply you order direct, C. O. D.

KOKO-KOOLER

FARM PARTNERSHIP

How an Ex-Farmer Solved His Help Problem

IN 1924, a city man, whom the writer knows, and who was not satisfied in various ways with town life, purchased a 300-acre farm a little over a mile from a rural village. He had formerly been a farmer, before living in town, but had become discouraged over the hired help problem and had sold out and moved away. He had two sons, at this time, who were attending school most of the time and who worked in the city during their vacations.

When this "ex-farmer" came back to the country and purchased the 300-acre farm, he decided he would make a partnership affair of the new venture. The two sons were now in their twenties, so he took both of them, also his wife, into the new firm, each sharing alike (the four of them) in expenses and profits—thus each one feels he belongs to the farm and is ready to shoulder all responsibilities.

The Way It Worked Out

This partnership scheme is working out splendidly. They now own a tuberculin tested, purebred herd of Holsteins, and are raising calves, hogs, and quite a lot of poultry. The farm is well wooded, so this spring all are busy making maple sugar, and syrup, the latter selling at $2.25 per gallon.

The family has joined the Grange, and the young men are active in the Sunday school work and all of the activities of the nearby village. The mother takes time to help the women's organizations of the community, of which she is a member.

Such a family is a real asset to any rural community, and if more parents would do as this man did, making a family partnership of the farm management, the farming industry would find that true cooperation existed on a paying basis in rural communities as well as in town industries.—E. M. L. B.

Unloads in Lancaster

A REPORT of the Pennsylvania Bureau of Markets states that the railroad records show 446 cars of perishable produce unloaded in Lancaster during 1925 as compared to 541 cars unloaded in 1924, a decrease from last year of 95 cars. This business represented 17 different commodities arriving in carload lots as well as 52 cars of mixed produce. Fifteen states shipped fruits and vegetables to Lancaster during 1925.

Fewer Apples Received

Apple receipts dropped from 40 cars in 1924 to 32 cars in 1925. The striking part of these figures is disclosed in the fact that the state of Washington did not supply a single car of apples in 1925 altho 19 cars of western fruit found their way to the Lancaster markets in 1924. Pennsylvania apple growers, on the other hand, furnished 13 cars of the 1925 supply as compared to only two cars of Pennsylvania stock used in 1924.

Local supplies of potatoes were used to a greater extent in 1925 since only 54 cars of shipped-in tubers were used, as compared to 73 cars in 1924.

Peach receipts dropped from 10 cars in 1924 to 5 cars in 1925, due to the much higher prices of the fruit during the past season. The summary of receipts in Lancaster during 1925 is as follows: apples 32, bananas 138, cabbage 26, cantaloupes 20, celery 1, grapefruit 8, grapes 8, lemons 4, lettuce 1, mixed produce 52, onions 3, oranges 49, peaches 5, pineapples 3, potatoes 54, sweet potatoes 6, tangerines 1, watermelons 35.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

PROBABLY PARASITES. — Can you tell me what to do for our pig? I have three of them, two are doing fine but one is thin. Eats very little. We feed them middlings, slop twice a day, and corn. They don't want the corn.—W. W., Orwigsburg, Pa. The pigs should be treated for parasites. Veterinarian should administer the capsules or supply you with the proper treatment. A good growing ration consists of a mixture of 100 pounds corn, 10 pounds digestor meat and bone tankage, 5 pounds oil meal and 5 pounds ground alfalfa.

COW NOT DOING WELL.—A cow that freshened May 14 has ever since refused to eat hay and corn fodder. She eats a little grass, oats and some gruel but she doesn't chew her cud. She always drank lots of water. The cow seems to be in pretty good health but lost some weight.—J. O., Hegins, Pa. It would be well for you to continue feeding the things this cow will eat, namely grain and grass. Supply her with a mixture of four parts steamed bone meal and one part salt, allowing her to eat as much as she wants. Provide plenty of fresh water. The physical condition of this animal can be built up in this way.

COW IN POOR CONDITION.—Please advise me what to do for a scabby cow. She has running wounds on her feet and has been a poor feeder since she had the first calf. She will have a second calf about June 15, and is hardly eating.—J. G. G., Monongahela, Pa. From your description this looks like a case requiring a veterinarian. There is evidence of poor nutrition. Good clean alfalfa or clover hay, silage or pasture, if available, with grain, including bran and oil meal, should be fed. The foul feet should be thoroly cleaned and kept clean and dry. Better have the animal examined to determine the cause of the scabs.

MARE HAS SPELLS.—I have a mare about twelve years old. She had a colt last April. I weaned the colt in March. About the first of May this mare came in heat. I did not breed her. Now I can't work her. She sometimes stops and does not want to start. Then when I get her started she trots. I can't work her that way.—R. A. H. H., Pleasant Hall, Pa. Would advise that the reproductive organs be examined by a competent veterinarian. It is possible that this mare would be normal if bred again, and I would advise that this be done if the structures are normal.

COWS FAIL TO COME IN HEAT.—I have nine cows and one bull. Two are with calf. Two were fresh in October, three in November and two in December. Now these cows do not come in heat. I was feeding a 20 per cent dairy feed this winter and nothing but corn fodder, no clover hay. I do not think it is abortion. I have had the cows five years. Also, our Collie dog has worms; what is good for her? One mare is thin. Believe she has worms, too.—E. S. A., Winfield, Pa. You should have these cows examined by a graduate veterinarian to determine the condition of the reproductive tract. Cows may fail to come in heat due to the presence of a corpus luteum in the ovary. This can be removed and heat is usually evident in 3-7 days after examination. At the time of this examination have the veterinarian administer the worm medicine to your dog and make an examination of your horse.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

The New CHRYSLER "60"

Again Chrysler Quality and Performance—
New Lower-Priced Six

A High Quality Six of Extraordinary Interest to Buyers of the Lower-Priced Sixes—

A Sensational Value

Walter P. Chrysler, manufacturer of the famous Chrysler "70", the superfine Imperial "80" and the preferred four, Chrysler "58", now presents the new Chrysler "60"—the latest sensational product of Chrysler engineering—the first Chrysler Six at so low a price.

At last, all of the supreme value and performance you naturally expect from Chrysler, in a size and at a price that revolutionize values and quality among lower-priced sixes.

Chrysler Quality—without an equal in the whole industry—in the new "60" now completes Chrysler domination of the three great fields in which sixes are pre-eminent.

Chrysler Performance—always sensational, always superior—measured by the Chrysler model numbers—"58"-"60"-"70"-Imperial "80".

And in this newest Chrysler—the six-cylinder "60"—all of the Chrysler superiorities, features and new results combined in a quality six which upsets all previous standards in the lower-priced field.

Never before such a six at such a price as the Chrysler "60".

See the new Chrysler "60". Drive it. Don't be satisfied with anything less than Chrysler "60" value, quality and performance.

One Reason Why Barns Burn

Care in Handling Hay Will Stop Most of the Losses from Spontaneous Combustion

By E. GRANT LANTZ
The Pennsylvania State College

In the Great Open Spaces

When this picture was taken these 15-30 tractors had just finished plowing 640 acres in 7½ days, on a 3000-acre farm in Kansas.

FARM fires, due to any cause, except arson, can be justly attributed to carelessness.

In 1920, the farm fire loss represented 12.6 per cent of the total fire loss of Pennsylvania. This figure is significant since the value of farm buildings, livestock and machinery is but 6.7 per cent of the total value of the property in the state which is subject to loss by fire. During the year 845 barns were destroyed by fire. Barns and stables, dwellings, implements and machinery, outbuildings and miscellaneous property valued at $2,796,871 were destroyed by fire in Pennsylvania in 1918. The farm fire loss has increased every year. In 1924 it amounted to $3,293,863.

Causes Mysterious Fires

Insurance replaces a portion of the financial but none of the economic loss. Crops raised from the soil can be paid for but not replaced. The Pennsylvania bank barn is the key to the farming system and the center of activity. The loss of the barn upsets the farming system so that in many cases the farm remains idle until the barn is rebuilt.

Careful surveys which have been made in Montgomery, Berks, Chester and Delaware Counties indicate that several of the barn fires in those sections were caused by spontaneous combustion.

To be absolutely clear it is best to refer to spontaneous combustion as self-ignition. Under certain conditions various materials are susceptible to self-ignition. Because these conditions are difficult to duplicate for the purpose of demonstration the acceptance of the self-ignition theory has been greatly delayed.

For self-ignition to occur there must be an inflammable material raised to the kindling point. This entire process is known to the chemist as oxidation. This combustion or oxidation proceeds at various speeds. When compared with the burning of gun powder, the smoldering of a mass of rags is an example of slow oxidation. But when compared with the rotting of the same rags, smoldering is an example of very rapid oxidation.

Self-ignition in hay requires the presence of moisture either within the plant or in the form of rain or dew. It must be present to support the chemical reactions which eventually lead to self-ignition.

Six undisputed cases of spontaneous combustion were found during the survey in Southeastern Pennsylvania. The case which occurred at the Pennsylvania State College several years ago is cited below as a typical example and proof of the fact that present farm practices are often productive of fires due to self-ignition.

A Peculiar Odor the First Sign

This College barn is of the common single-deck type with frame walls. The mow in which the fire occurred is 23 feet deep, and 18 by 23 feet in width and length. The mow floor is constructed of two thicknesses of one-inch boards so placed as to perfectly break joints.

There was corn fodder to the depth of about one foot at the bottom of the mow when the hay was stored. The corn fodder was not removed and the hay, about 30 tons, was unloaded with a horse fork, and dropped into place. The hay was second growth clover and timothy, mostly clover, quite fine, and when harvested thought to be in unusually fine condition.

For several days previous to the ignition, a peculiar odor had been noticed about the barn, and a somewhat careful examination was made to ascertain its source. The result of this examination seemed to indicate that the hay was heating, but no indication of fire was seen or even suspected. The odor was described as being similar to that of burning grain.

Fire Dropped into Cow Stable

One evening in October fire was seen dropping from the ceiling of the cow stable. Holes were burned thru the floor above the stable and it was seen that the mow was on fire.

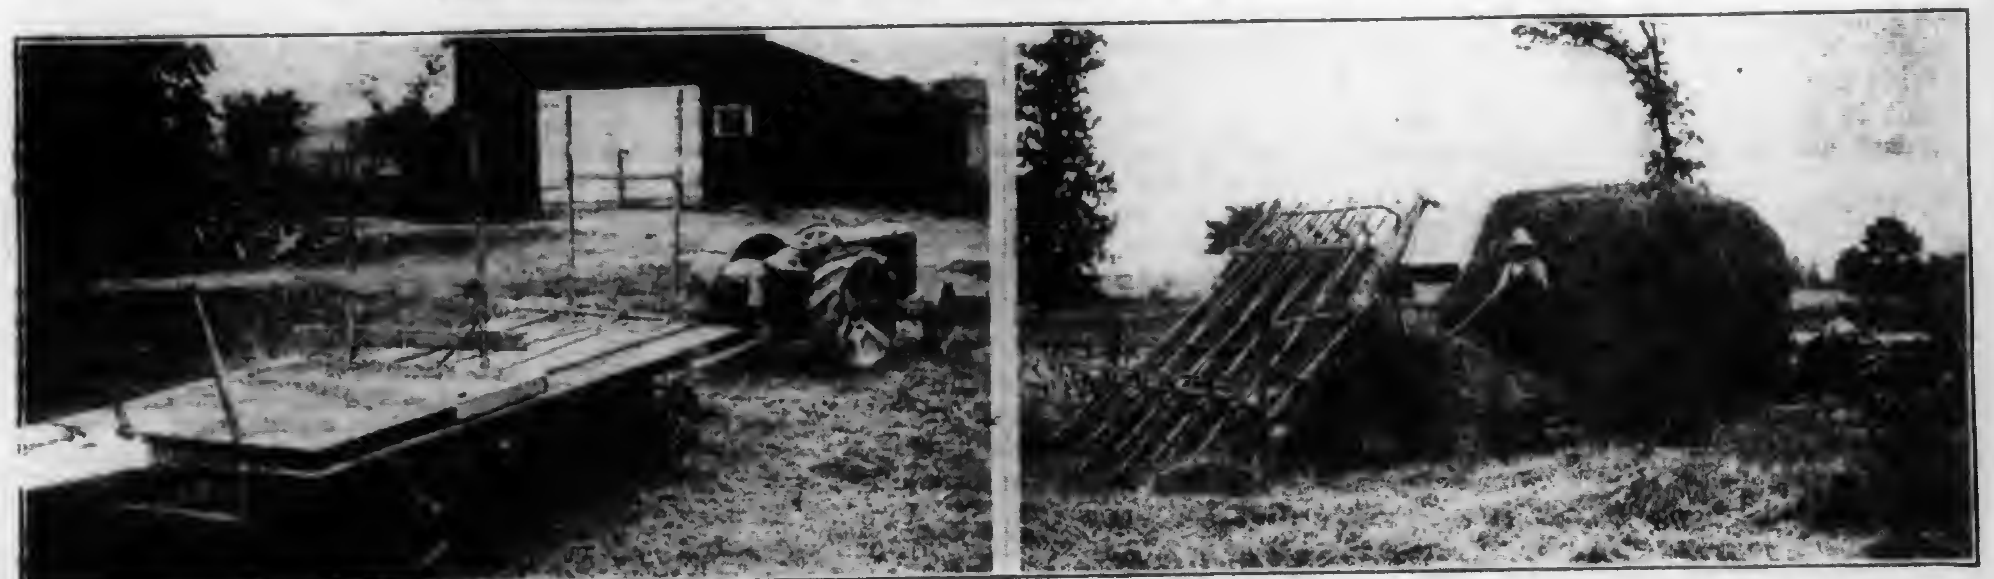
The fire company was called and the holes were sealed with wet blankets to prevent a draft. All visible fire was soon extinguished, and it was decided to remove the hay from the mow at once. Wetting the hay as it was removed from the mow was necessary to prevent it from bursting into flame upon reaching the open air. All of the center portion of the mow was thoroly compacted, hot and smoldering. The high temperature made it decidedly uncomfortable for those removing the hay.

The holes which were burned thru the floor were over the center of the stable and not near any partition or post. A large part of the hay removed was so thoroly charred that it would crumble when handled. Some of it had not been subjected to so great a heat and was only brown in color, but wholly unfit for stock feed.

The temperature of the hay gives the only positive proof that the hay is or is not heating. The temperature, to be accurate, must be taken at the point where the fork drops the hay and three or four feet below the surface. An easily constructed device for this purpose consists of a broom handle, sharpened at one end and grooved to receive the thermometer. The normal sweating temperature should not rise above 158 degrees. A temperature of 194 degrees Fahrenheit is critical and dangerous. It is also possible to detect heating by odors emitted. The change of odor from aromatic to penetrating is the

(to page 23)

This Outfit Saves One Man during the Rush of Haying Season



THIS hay wagon has two platforms. The short one, which stands on rollers, is at the rear end when the wagon goes into the field. When loaded it is drawn forward by means of a windlass and cable on the front of the main platform. The photograph at the right shows the outfit just after the small platform has been moved to the front, leaving the rear half of the wagon emp...

Agriculture at the Sesqui

PREPARATIONS for holding a Sesqui-Centennial celebration of the signing of the Declaration of Independence in Philadelphia have been pushed so fast during the past six months that the results are almost miraculous. The opening or dedicatory services were held on Memorial Day, and the placing of exhibits is going on rapidly. The exhibition is not yet in complete readiness for visitors but will be within a few weeks and the prospects are that millions of people will pass thru its gates during the following months.

Farmers will be glad to know that agriculture is to be given a big place in the exhibit. The Palace of Agriculture was one of the first buildings completed and it is the biggest structure on the grounds. The building covers about eight and one-half acres, being 460 feet wide and 970 feet long. It will contain the food, civic and foreign exhibits and will indicate the progress made during the last half century. In addition to the continuous agricultural exhibit a great livestock show will be held in September. We hope to be able to give more information as time goes on because we are sure that the farmers will want to see and learn about this, the most modern exhibition of industrial progress.

United States Not Militant

THE great majority of the American people will applaud the statement made by President Coolidge in his Memorial Day address that this is not a military-minded nation. However, it takes more than the assertions made by officials and other prominent people to establish the truth of the statement in the minds of foreign people. Basing their judgment upon their own past history they argue that our development into a strong nation is due to military action and they see in our progress the likelihood of extensive world conquests in the future. True, we do have those who are jingoistic in mind and speech, but the great mass of the American people is solidly against wars of conquest and is entirely devoid of imperialistic tendencies.

However, example is more powerful than precept and it behooves us to see that our actions do not leave a wrong impression in the minds of others. When they misconstrue the events in our national history and listen to our peaceful protestations with tongue in cheek it makes it doubly incumbent upon us to see that our actions do not belie our words.

Supply Our Own Markets

PENNSYLVANIA farmers have the best home markets in America, a fact which many are just beginning to realize. The state has more large towns and cities by far than any other, and, being small in area, all of those consuming centers are within easy reach of all the farmers. In spite of this, producers in distant states have overcome the handicap of high freight rates by superior grading and packing and have competed successfully with the Pennsylvania farmer in his own home markets.

A few seasons like the 1925-26 potato marketing season may change all this. When local producers add better grading and packing to their experience this year in using motor trucks to reach the local market they will be in a position to demand and get the preference in the nearby buying centers.

Farm Relief Bills Dead

IT IS generally conceded that there is little or no hope of any of the so-called farm relief bills being enacted into law at this session of Congress. The new Haugen Bill which, as a compromise, had the backing of many of the Corn Belt people, was defeated in the House last week. It is felt that anything which may now be agreed upon and enacted will be based upon political expediency and not upon a desire to provide a workable remedy for the alleged conditions of farmers in the Middle West.

A majority of the representatives in twelve of the states voted for the Haugen Bill, most of them being in the western and midwestern sections. In most of the eastern states not a single vote was cast for it. In Pennsylvania eight of the thirty-six members voted for the bill, viz., Greist, Esterly, McFadden, Magrady, Beers, Swartz, Kurtz, and Menges. Only one other favorable vote was given the bill by the representatives from the Middle Atlantic and New England states, it being cast by Zihlman, of Maryland.

Worth Thinking About

AN OBSERVING farmer remarked the other day that the stiff times which farmers have been experiencing the last three or four years were not without a compensating value. He said the small income and heavy outlay which has been the lot of most farmers had taught lessons of great value,—something which would be good for everybody, but which, unfortunately, everybody did not get.

Everyone, including farmers, prospered mightily during and following the war. The big incomes fostered the development of extravagant systems of living. Up to the present time all classes except farmers have been able to maintain their extravagance. The days of the farmer's prodigality, however, ended in 1921 and he had to return to hard work and the simple life. In order to carry on he had to adopt short-cuts and economical practices. In short, he had to study his business in a businesslike manner as never before, and for this reason he is better able now to make a profit at farming in the returning good times than he has ever been. His training in the school of experience under the stern teacher, Necessity, has made of him a real business farmer,—that is, if he has stuck to his job thru the lean years.

Huge Local Debts

THE publicity which has been given the reduction of the federal public debt and the federal taxes should not lessen the demand for retrenchment in state and local expenditures. Most people do not realize the tremendous rate at which expenditures of the state and local governments have been increasing. A compilation recently made shows that the sale of county bonds in the United States in 1901 was $16,379,400. In 1924 this amount had been increased eightfold and totaled $206,823,100. The total state bonded indebtedness of all the states in 1901 was $13,573,800. In twenty-four years it had increased to nineteen times as much, while the district school bonds of the nation amounted to twenty-five times as much as they did twenty-four years ago. These are only a few of the examples showing the huge increases which the different governments are making in their indebtedness. Of course, going into debt is often necessary and excusable, but it can be done unwisely. The worst of it is that current expenses have increased in almost the same proportion so that little is left of the big taxes collected with which to reduce the debts.

Editorial Sidelights

IN SPITE of the interesting things Mr. Tapley has to say about Florida (Page 8), we stick to the conclusion about that state which we arrived at several years ago.

One stormy winter day we opened a parcel post package from relatives in the South. It contained pecans, several grapefruit, and the branch of an orange tree from which we picked several juicy oranges of fine flavor.

Then and there we arrived at our above-mentioned conclusion, to wit: We wouldn't care to live in Florida, but it is a wonderful place to have generous relatives.

"What is a splash dam?" asked one of our colleagues who was raised in southeastern Pennsylvania, after reading the proof of this week's News and Notes (Page 21).

We explained that trout streams in northern and central Pennsylvania are usually too shallow and narrow to float logs. The early lumberman had no railroads to haul their timber to the mills, so they built large dams near the headwaters of the small streams. The dams impounded enough water to make an artificial flood when the gates were opened suddenly. On the crest of the flood the logs were swept down the narrow valleys to the Susquehanna, and on to Williamsport, then the lumber capital of the United States.

Perhaps the splash dam got its name from the big splash it made when the gates were opened and the water rushed out, carrying away the logs that had been piled along the stream below.

This system of lumbering was abandoned before our time, but we have known a few of the men who rode those swirling, bumping masses of slippery logs. Equipped with nailed boots, a spiked pole and lots of agility and daring, they saw that every log kept moving while the moving was good.

As the sawmills were moved closer to the forests, the splash dams gave way to long icy skidways, knowns as log slides. The slides in turn were replaced by prosaic logging railroads. Now the forests are gone, but some of the old splash dams remain. Altho nearly rotted away or filled with mud, they still provide a quiet pond for the contemplative fisherman.

Washington Letter

ANOTHER COMPROMISE BILL.—Farm relief legislation is evincing some life in the Senate; in the House it is dormant. Attempts have been made to secure consideration of the McLaughlin bill, a compromise Haugen scheme, in the House Committee on Agriculture, but objection to any further discussions of farm relief legislation until the Senate acts, put the McLaughlin proposal temporarily to sleep.

The McLaughlin bill retains the equalization fee to finance the disposal of surpluses. It would be assessed immediately on all products, including cotton. A loan fund of $175,000,000 would be provided to be advanced to farmers' cooperative organizations and repaid to the government at 4½ per cent interest.

CONFERENCES PROVE DISAPPOINTING.—Senator McNary, of Oregon, and other western senators, have given notice that they will insist upon consideration of farm relief legislation before Congress adjourns. Administration leaders have been holding conferences with senators and congressmen in an endeavor to secure an agreement on a compromise farm relief measure, but the results so far are disappointing.

DEALER LICENSE PLAN ATTACKED.—The Department of Agriculture's scheme of registration and licenses for fruit and vegetable dealers is being attacked in the Senate on the grounds that the department has no authority to place such restrictions upon the industry. A. U. Cheney, of the American Fruit and Vegetable Shippers' Association, says he believes the regulations imposed by the Department of Agriculture under the order recently issued, would eliminate scalpers in the fruit and vegetable trade, and go a long way toward improving the practices of fruit and vegetable dealers.

GAME BIRDS TAKE SENATE'S TIME.—Seldom has a measure of minor importance consumed as much of the Senate's time as the migratory bird refuge bill. This bill, which is fostered by game clubs, has crowded aside farm legislation and other important matters for several days. The bill itself states that its purpose is the establishment of migratory bird refuges and public shooting grounds. It is suggested by one farmer leader that few farmers would be able to travel long distances to enjoy the privileges of these government maintained bird shooting grounds. Some senators, however, say that the purpose of the bill is to secure government shooting grounds before the private clubs can get hold of them.

WOULD CONNECT CHICAGO WITH GULF OF MEXICO.—The dispute in the House over the diversion of water from Lake Michigan into the Illinois River has divided the Middle West support for the lakes-to-ocean ship canal. Representatives from Michigan and Ohio are opposing the Chicago diversion scheme on the grounds that it will impede Great Lakes navigation. The diversion at Chicago diminishes the carrying capacity of ships on the Great Lakes by 3,000,000 tons per year, and the loss to the shipping interests is practically $1 for each ton of decrease.

It is contended by the other side that over $500,000,000 has already been expended in the development of waterways in the Mississippi Valley. An additional expenditure of only $3,057,000 is all that is needed to complete an adequate channel of not less than nine feet in depth, thereby establishing the greatly needed lakes-to-the-gulf waterway.

THESE BILLS MAY PASS.—Several bills of special interest to farmers have been reported out favorably by congressional committees recently and are in a fair position to pass Congress.

The Senate Banking and Currency Committee has reported the McLean bill providing that secretary-treasurers of farm loan organizations shall be approved by the Federal Farm Loan Board before taking office.

A bill introduced by Congressman Hare, of South Carolina, would prevent commission merchants from destroying fruits, vegetables and other perishable farm products, without good cause, and is designed to keep them from making fraudulent reports to shippers on sale of goods received on consignment. It would require a certificate from the government inspector that the produce was unmarketable, before the commission merchant would be allowed to dump it.

LIKE A LIBRARY OF PLANTS.—The establishment of a great national arboretum near Washington by congressional action is held by nature lovers to be the crowning achievement of the year in horticultural progress. The project has had the support of florists, nurserymen and professional horticulturists for many years. It is believed that this arboretum will occupy a place in horticulture such as the Congressional Library in the field of literature.

WILL GIVE RUSSIAN SEED ANOTHER TRIAL.—Much evidence as to the unsuitableness of Italian red clover and Turkestan and South African alfalfa seed for general agricultural use in this country, was presented at a hearing on the matter of giving imports of these seeds a red stain to distinguish them from American seed.

"We are lost!" the captain shouted.

No objection was made to the staining of Italian red clover seed, but representatives of the Russian seed trade asked for an extension of time for more experimental work before requiring the staining of Turkestan alfalfa seed.

MORE INTEREST IN SHEEP.—The Eastern Wool Growers' Association, Inc., was organized at Richmond, Va., May 31, and will establish headquarters in Baltimore. It includes in its membership members of the sheep and wool growers' organizations of West Virginia, Virginia and Maryland, who will market more than 500,000 pounds of wool thru the central association this year. A revival of interest in sheep raising is noted in these three states, especially in Maryland.

AMERICAN BINDERS SHIPPED ABROAD.—Largely increased shipments of tractors and grain harvesting machinery from the United States to foreign countries is noted as evidence of the well planned efforts of these countries to increase their cereal production. In April this year exports of harvesters and binders were 8568, compared with 5888 in 1925. A total of 5504 tractors was exported during the month compared with 4303 in April last year.

CONTAINER BILL CAUGHT IN JAM.—The standard container bill was indorsed by the National Conference on Weights and Measures which held its nineteenth session in Washington, May 28th. This is one of the few bills which has developed no opposition from any source, yet it is making slow progress thru Congress because other bills are considered of more importance. The conference decided to withhold action upon the question of whether ice cream should be sold by weight or by measure, until the next annual session.—E. E. Reynolds.

Harrisburg Letter

WAGES TOO LOW.—Studies of the employment situation in a dozen parts of Pennsylvania made under auspices of the State Department of Labor and Industry bring the report that farm labor is in demand, but that wages on the farm are too low to compete with industrial opportunities. This is the first time the department's reports have come right out with this statement. The road construction under way operates against a supply of farm labor in some sections.

BIG FINES FOR TREE TAKING.—The new state law forbidding removal of growing plants or trees has had a good test in eastern counties and one instance has come to the State Capitol where fines aggregating $750 were imposed on people who went on private land and tore up trees and plants. The law attracted much attention when approved and in some counties was much opposed. The test of a year, however, is held here to have proved its value.

FAIRS AS USUAL WILL BE INSPECTED.—There are indications that relations between the county fairs and the state government are not as cheerful as heretofore, due to the state aid controversy. It is said to be the plan of the State Department of Agriculture to send inspectors to the fairs again this year to see how they are conducted.

AVERAGE NUMBER OF FARMERS.—As a result of the primary elections about the average number of farmers has again been nominated for the Legislature. However, in quite a few instances men who had been re-elected time and again from rural counties failed to win the nominations. There are over 30 men classed as farmers running for the Legislature. Probably a good many more are in sympathy with the rural point of view because of residence in small communities.

VACANT FARM INQUIRY.—Attempts to make a list of vacant farms have run up against a snag in some parts of the state. When addressed some owners are not disposed to class their farms as vacant or idle, except by chance or for the time being. The number of abandoned farms reported is very small.

COMMERCIAL ORCHARD PLANS.—The Statistical Bureau of the State Department of Agriculture is working out plans to provide definite information on commercial orchards by July 1 and to keep it going on an even more extended scale than the last two years. Efforts are now being bent to obtain some figures on normal yields for guidance in estimating.

HOLD UP GAS STATIONS.—State Police authorities have been showing a disposition to go slowly in approving locations for new gasoline stations in some sections because of the failure of owners to place the pumps back from the road more than has hitherto been the case. The number of applications this year has been larger than for a long time.—Hamilton, Harrisburg.

New Jersey Letter

HORSESHOE CONTEST STAGED.—New Jersey field meetings will have an innovation this season when the New Jersey Federation of County Boards of Agriculture and the New Jersey State Grange schedule a state-wide horseshoe pitching contest for their annual summer picnic at Bridgeton in late July. The interest in horseshoe pitching has revived considerably within the last season and early indications point to a spirited competition.

TOMATO ACREAGE HEAVY.—Handling of the tomato acreage situation in southern New Jersey is somewhat of a puzzle this season in view of the excessive carry-over of can tomatoes. The acreage in can tomatoes promises to be large, despite heavy reduction in acreage in nearby canhouse states. Some reports indicate a 25 per cent increase in acreage in some sections of Salem, Gloucester and Cumberland Counties. On the other hand, canners are contracting for only about 75 per cent of the acreage under contract last year which apparently will give a much larger per cent of the production this year to go on the open market. Present stocks of tomatoes are cleaning up better than previously reported and the situation from the market standpoint looks reasonably favorable.

FARMERS HATCHING PHEASANTS.—The State Fish and Game Commission has distributed several thousand pheasant eggs to farmers of the state who agree to hatch the eggs under hens and turn the young pheasants loose as soon as they are able to shift for themselves. The eggs being distributed by the state are from the State Game Farms at Forked River and Rockport where several thousand young birds are being raised at present for re-stocking purposes. In Burlington and adjacent counties pheasants have been quite carefully guarded in recent years because the birds have been active in attacking the Japanese beetle.

LABOR SUPPLY MODERATE.—The proportion of farm labor to demand in May was not quite as favorable as earlier in the spring altho farmers in most sections of the state have their needs fairly well taken care of. The potential supply of labor as reported by the State Bureau of Statistics and Inspection indicates a situation not quite so encouraging as last year.

WILL USE MORE TRUCKS.—Hammonton berry growers are depending more and more upon motor trucks to deliver their berries to the New York market. Practically all of this transportation, however, is supplied by commercial trucking concerns or individuals, the average grower finding that the 112-mile trip to New York is not a paying proposition unless there are full loads or return merchandise. By far the larger per cent of the berries will be moved by trucks this season.—B.

Early Market Profits in

DEL-MAR-VA
EASTERN SHORE ASSOCIATION

The Historic Eastern Shore

See Del-Mar-Va for yourself—the great Peninsula between Chesapeake Bay and the Atlantic Ocean. A few hours in your car and you are there. Travel all over the Peninsula's 6,000 square miles in comfort—it has the biggest mileage of improved roads to area of country in America.

Del-Mar-Va will open your eyes. You'll see the world's greatest potato-raising counties—the biggest tomato-canning county. You'll see where all out-doors is like a greenhouse for forcing vegetables. You'll see the world's largest tree nursery and famous poultry farms and orchards. You'll see where hen-houses are kept open all winter. In some counties you'll see more general farming, wheat, dairy-herds. Del-Mar-Va has surprisingly mild winters, 300 days of sunshine a year, and from 185 to 210 growing days a year. Del-Mar-Va gets its crops to market early at top price. Two crops of same kind a year are common following greens in March. Successful co-operative associations render effective selling service.

Remember that the big population centers of the East are within truck haul. New York is less than 250 miles of the center of Del-Mar-Va and trucks make the round trip regularly in 24 hours over level roads.

In addition there is good co-ordinated service by rail and by boats.

Here and there through highly productive sections are farms, abandoned when roads were poor. You can buy some of these farms near fine towns and good schools from $50.00 an acre up. The soils are easily worked.

Del-Mar-Va has fine ocean beaches, broad rivers and hundreds of streams. Great fishing and duck-shooting. Many farmers derive substantial extra profits from clamming and crabbing.

Your wife and children will find living conditions pleasant and advantageous in Del-Mar-Va—as to surroundings, schools, churches, colleges and wholesome recreations. Better drive over and see it all first hand.

FARQUHAR
POTATO
DIGGER

The Most Profitable Way To Dig Potatoes

The Farquhar Potato Digger contains every modern device for rapid, clean digging. It puts the potatoes in a neat, compact row, ready for easiest and quickest handling. Proven right by the hardest kind of field operation.

Elevator Diggers are built with cross bottom, or Riddle Bottom for stony ground. Strongly constructed.

"Success Junior" is the plow-type digger for the smaller grower. Thousands in use—a great time and labor saver.

Write for new illustrated catalog No. 225. Ask also for catalog on wide-bottom furrow Grain Drill.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

RAIN, glorious rain, has come at last! While the Memorial Day exercises and the opening services of the Sesqui-Centennial at Philadelphia were marred somewhat by the showers, those who were longing for refreshing rain to water the parched ground and thirsty plants rejoiced. The reports from all sections of our territory indicate that the weather this spring has been similar to that in eastern Pennsylvania,—cool and dry, and that vegetation was lagging.

✚ ✚ ✚

APPARENTLY we have an almost 100 per cent stand of potatoes. This is the first time they have come up so evenly, and I believe it is due to the thoro mixing of the soil and fertilizer before planting. Our experience the last two years indicated very plainly that dropping the seed piece in immediate contact with the fertilizer killed the germ or caused the piece to rot. I understand the makers of potato planters have changed the construction of their machines to obviate this danger. If sufficient rain falls after planting the danger is not great.

✚ ✚ ✚

WE SET several hundred cabbage and tomato plants a week before the rain came and most of them failed to start. Lack of moisture, wind and low temperatures make a combination which plant nature cannot survive. This is especially true if plants are tall and spindly. Such plants should be set deeply, even if it is necessary to lay part of the stems horizontally in the soil. I have come to the conclusion that it does not pay to set anything but transplanted plants, unless they are grown thinly and out in the open ground. Added to adverse weather conditions we find more than the usual number of the pestiferous insects,—flea beetles and cutworms.

✚ ✚ ✚

WE HAD a chance to buy quite a quantity of poultry manure this spring, but there were two reasons why we did not. One was that it was offered too late, and the other was that neither of us knew the market price of chicken manure. It was recommended as having been well cared for. I am sure there are a number of readers of Pennsylvania Farmer who would be glad to know what others pay and receive for this kind of fertilizer. Those who have sold and those who have bought it will please write short letters on the subject for publication. One man wanted a dollar a bushel and another wanted one hundred dollars for the manure from 500 hens.

✚ ✚ ✚

YEARS ago it was the common custom in our neighborhood to mix chicken manure with leached wood ashes and drop a small handful in the corn hill. The manure furnished the nitrogen and phosphoric acid and the ashes furnished potash. Grandfather called this mixture "the hoist jack," and it surely did start the young corn off in good shape. But in these days of ready mixed fertilizers and when nobody makes soft soap to furnish the leached ashes we do not see the practice.

✚ ✚ ✚

ALONG with the "outoven" where our grandmothers baked their bread and pies has gone the soap trough and the ash leach. In my little boyhood days the soap trough was a permanent fixture in the farm cellar, and out in the back yard was the inevitable wooden tank called the "leach." Into it were placed the accumulation of wood ashes for leaching in the spring. When it was filled, water was poured slowly on the top and allowed to drain thru onto a grooved bottom board. The resulting lye dripped into an earthenware receptacle ready for soap making. As I remember it it required several days to do the leaching as only a little water was added at a time. Grandmother would drop in an egg occasionally to test the strength of the lye. When it was just right the egg would be borne up well out of the liquid. When the lye was placed in the big iron kettle for boiling, the accumulated meat skins and fat pork trimmings were added. After they had been cooked the proper time, the result was an amber colored, jelly-like material known as soft soap.

THE CHEERFUL PLOWMAN

Pie! Pie!

PIE! Pie is a stand-by with me, I shall say! I run to my pie like a cow to her hay; it's carte with me daily, I ate it today! Crust double or single, uncovered or not, lukewarm, or not warm, or pipingly hot, no matter, no matter, I love it a lot! Cranberry, blueberry, strawberry, plum, chokecherry, custard, mince, apple or crumb, they all hit the spot in my tummy-tum-tum! When tired in the field and in need of a lunch, I think of the things that I'd willingly munch, but pie figures first in my hint and my hunch! When tired on the street where I loiter or buy I know I would often fall famished and die if I did not go buy me my portion of pie! When out on a hunt in the woods in the fall when my wearied feet slump to a slovenly crawl then "Pie!" is my stomach's unfaltering call! When out on a picnic with wife and the rest a message is phoned from the slack in my vest to tell me that pie as a food is the best!

I'm told by some doctors that pie is a curse, that no human fodder is known to be worse, the friend of the devil, the friend of the hearse! I'm told that full many now under the sod might still be on earth with the pick and the hod had they known in season that pie was a fraud! I know well enough of the warnings they sound, of piemen whose wares are most tempting and browned, but who put their friends, one by one, under ground! I know how 'tis said by the wise and the just that piemen take dust and return it to dust, that crepe should be hung on each feathery crust; but, nevertheless, I am sure, till I die, there'll hang in the space at the back of my eye a lithographed, deified, picture of PIE!—J. Edw. Tufft.

FLAG DAY

What Do the Stars and the Stripes Mean to You?

DO WE truly love our flag as we draw it up to catch the breeze on Flag Day? Or does it seem just a bit of gay-colored bunting that we flaunt because it is "the thing to do" on the fourteenth day of June?

Have we ever considered what real love of a flag may mean? After the close of the World War many of the sympathetic of our nation were touched by the joy of the people of Alsace-Lorraine at being returned to the ownership of their beloved France.

Since 1870 they had been ruled by an alien nation and the possession of a French flag had been strictly forbidden; yet when the glad news spread that they once more stood upon French soil, the tri-colored flags appeared as if by magic; appeared from hiding-places where they had been cherished and loved thru all the weary years! Let's pray God that we do not need calamity to reveal to us our love for the flag of our country!

The Symbolism of the Colors

Do we ever stop to consider the symbolism of those brave colors? The red which ever stands for vitality, vigor and gaiety; the white which represents purity, innocence and freedom from blemish; the blue of spangled skies, the color of highest honor and valor; the stars than which we have no higher visible aim.

Do we know how to salute the flag and the words of the salutation?

Do we know the words of our national songs which are played as the flag goes by? Or do we stumble along depending upon a valiant few to carry the song across?

Do we know who made the first American flag? And under what circumstances and of what materials? Do we know where it was first hoisted on land and on sea?

Do we consider the protection our flag gives us in foreign lands,—the protection, the freedom, the privileges that we—too often carelessly—enjoy beneath the folds of the Stars and Stripes?

Are we one hundred per cent Americans if we cannot answer these questions?—Alice Margaret Ashton.

Busy Jersey Field Day

GARDEN tractors, spraying machines and other farm equipment will be kept busy on the farms of the New Jersey State College of Agriculture at New Brunswick, on Farmers' Field Day, Wednesday, June 16th. Every department of the College will stage demonstrations and give lectures on important farm problems on this day. Particular attention will be given to troublesome diseases and pests affecting crops and poultry, and to seed variety tests.

Dairymen Will Judge

The dairy department will ask visitors to guess the productive capacity of four cows of each of the four principal breeds. This contest will give dairymen an opportunity to check up on their ability as practical judges of livestock.

Some of the prominent speakers at the morning meeting, which will begin at 10:30 Daylight Saving Time will be: Governor A. Harry Moore, of New Jersey; Dr. John Martin Thomas, formerly president of the Pennsylvania State College, now president of Rutgers University; Dr. J. G. Lipman, Contributing Editor of Pennsylvania Farmer, director of the New Jersey Experiment Station and dean of the College of Agriculture.

BELLE CITY
NEW RACINE

The THRESHER for Your FORDSON

Important Belle City New Racine Features
Two Feeder Governors for both volume and speed which positively prevents choking of the feeder and slugging of the separator.
Beater aids separation, spreads the straw across the straw racks, evenly distributed.
Four section straw rack gives ⅓ more agitation of the straw than most separators.
Long grate surface separates larger percentage of grain at the cylinder.

Profits from Fordson farming can be considerably increased by threshing your own grain with a Belle City New Racine separator.

Built to operate most efficiently with the Fordson, the Belle City New Racine allows you to thresh all small grains, alfalfa, clover, beans or peanuts at just the right time to secure the greatest revenue from them.

Many owners have paid for their Belle City New Racine separators on the savings of a single season.

Sold only through Ford dealers. Write for illustrated catalog and information on our deferred purchase plan.

Full weight, Galvanized— Apollo Roofing and Siding

Both farm and city property owners need to know the service and protection of reliable metal roofing.

APOLLO-KEYSTONE Galvanized Sheets give lasting wear and satisfaction for all forms of sheet metal work: Culverts, Tanks, Flumes, Roofing, Siding, Spouting, Gutters, etc. Sold by leading metal merchants. KEYSTONE COPPER STEEL is also unequaled for Roofing Tin Plates for residences and public buildings—fireproof, durable, and economical. Look for the Keystone included in brands. Send for "Better Buildings" booklet, containing plans and information valuable to farmers and property owners.

AMERICAN SHEET AND TIN PLATE COMPANY, General Offices; Frick Building, Pittsburgh, Pa.

Of course you're going to spray this year with the more effective, more convenient Pyrox, so

why not save money by getting your Pyrox in the five, ten or twenty-five pound drums?

YOU'LL save money and time and run absolutely no risk, because the new improved Pyrox will keep its creamy, easy-working consistency until used.

Last season the success of the new Pyrox was nothing less than sensational. Its increased effectiveness as a combined insecticide and fungicide spray, and its greater convenience, were revelations to the thousands who used it.

With Pyrox five minutes, and you're ready to spray. Pyrox saves time, labor and money. It goes farther. *It sticks*, making frequent sprayings unnecessary. Lengthens the growing season, increases the yield and improves quality.

Growing Tomatoes for Northern Markets Is a Five Million Dollar Industry in Florida

GREEN tomatoes by the basket, box, carload, train-load, cars by the thousands. Five thousand acres of tomatoes grown, picked, shipped, almost before Pennsylvania has finished plowing.

I am on the train going from Jacksonville to New Orleans after having visited most of the larger growing centers of Florida and have been greatly impressed by this five million dollar industry. There are two large districts in Florida, Dade County on the East Coast, below Miami, and Manatee County, south of Tampa, on the West Coast.

Tho green tomatoes become pink by the time we buy them, they are not as good to eat as are our northern grown red ripes, but when April rolls around, we are ready for new vegetables, even tho we know that native produce is of better quality and will be on the market in another month.

Seeding time in Dade County begins in September and continues sometimes as late as January. Most growers use seed beds to produce plants, but in some cases seed is planted in hills directly in the fields. Rains, winds and frosts may come to ruin and destroy the young plants, there must always be a second seeding to make sure of a plant supply for replacement.

On the East Coast

On the East Coast, about two thousand acres were grown this year under very adverse conditions. The greater part of this acreage is everglade land, drained but subject to floods. Many fields were drowned out this year, a few were frosted, yet to date over 1100 cars have been shipped by East Coast packers.

On the West Coast growing methods are quite different. The land is upland, the soil is sandy and should be irrigated, either by tile sub-irrigation or surface ditches. It is rather fortunate that water can be easily reached by drilling. The practice of staking the vines is increasing; the method resembling that used in the Marietta, Ohio, and Kingston, Pennsylvania, sections.

There are 10,000 plants to the acre, the rows about four feet apart and the plants about fifteen inches apart. Vines are pruned to a single stem and two plants tied to each stake. In some fields plants have been pruned but not staked. Fields where the plants are staked resemble a vineyard, long even rows, each plant about the same height, with their peculiar green foliage, yellow blossoms and silvery cast to the growing shoots. About 3500 acres in this one county. I thought that some of the fields near Palmetto were the best kept up and that the tomato plants were showing as nearly perfect growth as any I ever saw.

Growers Feed the Plants Well

Growers talk of feeding the plant as if they were feeding cattle. It is a real problem to get the right amount of fertilizer in the soil. I saw fields where two tons of 4-8-8 had been used to the acre. Practically every grower uses fertilizer in some form. It seemed to be universally accepted, that large yields were dependent on proper feeding methods.

The work of getting the tomatoes ready for shipment is not the easiest job in the world. The packing houses are usually one story sheds, located near the railroad or on a spur, so that packed boxes can be loaded easily on the cars. A few houses have attic space so that boxes may be nailed together and placed in chutes that send boxes to the racks directly in front of packers.

Most of the work is done on a piece work basis. One man with a helper can nail enough boxes to supply from five to ten packers. These box makers work rapidly. One man may nail together as high as 900 in one day, receiving one and three-fourths cents per box. One plant had a machine which made up five boxes per minute.

Inside the Packing Houses

The usual arrangement in the packing house is to have a single long packing table running lengthwise down the center of the building. Larger houses may have several packing tables. Tomatoes are delivered in boxes at an unloading platform, from here they are dumped on to a sorters' table or a long traveling belt. In a few places the fruits were put in large tanks for washing, coming out directly on the conveyor. Sorters grade the fruit, letting the ripes go to the end of the run, throwing out all culls and diseased specimens. The marketable fruits may be graded into fancy or ones and twos. There is one sorter to each packer.

Tomatoes are packed in six-basket carriers, the standard market sizes for fruit calling for either 144, 180 or 216 fruits per box. It will be seen that each of the six baskets would hold 24, 30 or 36 tomatoes, respectively.

The packer stands in front of the table, the fruit has been graded and is in separate bins. He grabs a box, places three baskets in the bottom and proceeds, arms working like pistons. Each tomato must be wrapped in tissue paper, the top layer in the basket having colored wrapper, with brand name.

When the three bottom baskets are packed, a middle rack is put in place and the second three empty baskets set in. When the box is finished the packer places his numbered card on top and sets it aside or on a moving platform. Packers are paid seven cents a box; a few of the best men will pack as high as 225 boxes a day.

Nailed in for Shipping

The nailer now has a chance to do his bit. The box is lifted and set down with some force, this helps to settle the baskets. A top is placed and nailed, four nails on each end. These nailers are more like machines than human beings. I saw one colored lad who was credited with being able to nail up 1500 boxes a day, or over three cars! There are 400 boxes to a car.

During the rush season these packing houses are busy places. Every one is working at top speed from early morning until late at night. Many of the best packers are transient workers, going north as the seasons open, tomatoes in Florida, peaches in Georgia, and apples in Washington.

The tomato deal is a high pressure industry, involving plenty of risk to get the crop. But there is a fascination in it for those who like it.—W. T. Tapley.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

They're Not All Flappers

TO THE EDITOR:—These days we hear a lot about young people loving ease, wishing to have a good time and not assuming any responsibility. The writer wishes to tell what some young people in his county have done to "carry on" when their parents were sick or died, or they were needed for some other reason.

Harry Feaster was sick all of 1925 and unable to do anything, being in bed most of the time. His two boys, both under 19, carried on the farm work on 70 acres during the year, finishing it in good shape. When their father died they got the stock and implements ready for a sale in March to close up the estate.

H. A. Loss was laid up with pneumonia lately on a 90-acre farm. He was so sick that he needed the constant attention of his wife. His two boys put out the corn and potatoes and a girl under 13 did nearly all the housework, going about it in a business-like way, as the writer has noticed. The father is out again.

When W. J. Leinbach had pneumonia for six weeks his daughter, Louise, living four miles from the high school she is attending, fed the team and cow, so that her mother could do the work of a nurse, too.

Harry Baker's father was not able to go on with the work on his 120-acre farm, so his son, a senior at State College, quit in February to help along with the farm work which he and a younger brother are now doing. He hopes to be able to go back to finish his course next year.

One of Edgar Shemory's girls, under 16, has run a sulky plow and a team in the roller-harrow all spring on a 90-acre farm, saving her father the expense of a man right along. She also does the family washing with a gasoline outfit for a family of 11, even helping her younger sister to do the cooking and housekeeping this spring while the mother was in bed a few weeks.

When tested, young people show their metal.—J. N. Glover, Union County, Pa.

Farmers Help Decorate

FARMERS are having the usual number of callers. As soon as the snowdrifts are gone the people from town begin to come. They come out and start to dig horseradish out of your meadow or anywhere they see a bit growing. Then when the fruit trees blossom we see them again.

Last year I looked out and saw two women breaking limbs off our cherry tree which is just inside the road fence. When they saw me they drove on, stopped at the next place and started for a quince tree that was in blossom. When the owner stopped them they said they were having the opening at the country club that night and they were on the decorating committee.

The next day they had a long piece in the paper and told what "lovely decorations," but did not mention that the farmers furnished them.—A. B. N.

RADIO DEPARTMENT

Eliminate Interference with a Wave Trap

THE increase in the number of high power broadcasting stations has been a good thing for radio listeners in general, but those who live within the shadow of the big stations are often so badly interfered with that it is difficult to enjoy a program from any other station.

Radio fans near Bound Brook, N. J., experienced considerable difficulty at first when WJZ opened the new station there. Most of them have been able to combat the interference successfully, however.

Nearly anyone can construct for himself a device capable of eliminating a strong interfering station without changing the reception from other stations. The device is called a wave trap and can be purchased ready-made quite cheaply.

With the wave trap connected, tune in the strong station that interferes with your reception. Then very slowly turn the variable condenser dial until you find a point at which the station is very faint or disappears. If it is impossible to eliminate the station completely, see first whether it interferes at all while you are tuned for the stations you want to hear. Should the interference continue in some degree, despite a very accurate adjustment of the wave trap, you can make it more effective by winding more than 7 turns of wire on the small coil. More than 10 turns should not be needed.

Where the wave trap gets rid of the station easily and over quite a wide range on the condenser, it may be possible to use as few as 4 turns on the small coil and still get good results. This should then be tried as it will mean better reception on the shortest waves on the set.

If a small snap switch be inserted between one end of the large coil and the variable condenser, it would be possible to adjust the condenser and leave it set for the interfering station. When that station causes trouble the switch is closed to eliminate it. A wave trap is valuable even on a set having three tuning dials, for even with three controls it is not always possible to eliminate the interference.—B. F.

If Set Doesn't Work

WHEN your set starts to cut up, refuses to get distance, distorts badly, grows weaker in volume perceptibly, and so forth—

1. Test your storage battery with a hydrometer.
2. Test your "B" batteries with a voltmeter.
3. Try a new tube in place of each old one in turn.
4. Clean and tighten battery connection wires.
5. Inspect aerial and ground system for loose joints.
6. Clean contacts on tube bases and in sockets.
7. Look for loose wires inside the set if you know how to fix them.
8. Test the "C" battery with a voltmeter.
9. Wiggle the loud speaker cord for looseness and broken points.
10. Don't take anything apart unless you are a qualified radio mechanic.—B. F.

$5,000.00

TRAVEL-ACCIDENT

Insurance

for only **$1** *a year*

PENNSYLVANIA FARMER

through a special arrangement with the FEDERAL LIFE INSURANCE COMPANY offers this remarkable policy to its readers. The unheard of low price of $1 a year for each policy is made possible because of the great number of policies sent out materially reduces the cost of each one.

The Federal Life Insurance Company is one of the leading insurance companies issuing accident insurance and has a record of twenty-five years' successful business operation. It has assets exceeding $7,500,000.00.

It has paid policy-holders and beneficiaries more than $10,500,000.00.

It owns its own building at 168 North Michigan Boulevard, Chicago. A picture of the Federal Life Building is shown above.

WITH the heavy summer travel begun and nearly every issue of your local paper reporting tragic accidents, you realize more fully how wonderful this offer is—a $5,000.00 Travel-Accident INSURANCE policy arranged for by Pennsylvania Farmer for its readers for only $1 a year. Under the policy you are protected as follows:

$5,000.00 For loss of life by wrecking of railroad passenger car, street, elevated or subway car as specified in policy.

$2,000.00 For loss of life by wrecking of horse drawn or private motor driven vehicle, bus, taxi-cab or passenger elevator as specified in policy.

$1,000.00 For loss of life by being struck or knocked down while on a public highway or being struck by lightning, cyclone, tornado, as specified in policy.

$10.00 Weekly for fifteen weeks for injuries sustained in the above manner as specified in policy.

Any representative of Pennsylvania Farmer will be glad to explain this policy to you. Applications must be made out on the application blank provided

Notice: Not more than one policy can be issued to any one person, but any and all members of a reader's family may each secure one.

Application

Print each name and address clearly and carefully. Illegible names will delay the delivery of your policy.

for $5,000.00 Travel-Accident Insurance Policy issued to readers of PENNSYLVANIA FARMER, Phila.

PENNSYLVANIA FARMER
Insurance Department, Philadelphia, Pa.

I am a reader of PENNSYLVANIA FARMER, more than 10 years of age and less than 70 years, not deaf or blind or crippled to the extent that I cannot travel safely in public places, and hereby apply for a $5,000.00 Travel-Accident Policy in the Federal Life Insurance Company issued thru PENNSYLVANIA FARMER. Enclosed is $1.00 (one dollar).

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Guard Against Hawks

HAWKS are hard to shoot but it pays to shoot at them and make them wary. This reduces the frequency of the visits and cuts down the losses.

Even the sound of sharp hammering frightens hawks away. Last year a lot of houses were being built across the road from my poultry farm. It meant a lot of hammering and scarcely a hawk appeared around the farm.

Hawks are often caught by placing a steel trap on a high pole in an open field near the colony houses. The bird likes to rest where it can watch for prey and may light on the pole. Hawks hunt with the eye and only catch what they can see readily. For that reason we have always protected our young growing stock by providing shade. Hawks are most adept at catching poultry in an open field where the chicks must run several hundred feet to shelter.

Colony houses should always be raised about a foot from the ground as a protection from rats and weasels and this space under the houses makes a good shelter from hawks.

Be Ready for Them

Our raiders usually appear just after sunrise and again in the early evening. Both periods are busy times around the poultry buildings and I always keep a shotgun and several shells ready for any hawk visitors that appear. Scarecrows are useful for about a week but then the hawk becomes wise. Bits of bright tin attached to the scarecrow will reflect sunlight and sometimes help. It is a good plan to change position of the scarecrow just before you have to be away from the range for a few hours. The hawks will take that much time to figure out what it is all about and stay away from the chicks.

My White Leghorn chicks have always been in more danger from hawks than my Barred Rocks. The white birds stand out against the earth but the dark Rock chicks are not easily visible at a distance.—R. G. Kirby.

Starting Young Turkeys

I would like to have some advice on how to raise turkeys. Would also like to know what feed is best for guineas.—F. E. T., Chester County, Pa.

Young turkeys can be started on stale bread soaked in milk and squeezed nearly dry. After three or four days they can eat the commercial fine chick scratch grain. As soon as the poults are large enough to eat it the ration should be changed to cracked corn and whole wheat. Some turkey raisers start the birds on chopped boiled egg mixed with cornbread crumbs.

Blackhead is a turkey disease which is not well understood. It must be controlled by raising the poults on clean soil away from the chickens. Vigorous breeding stock and the use of sour milk in the ration greatly help in cutting down the losses. Other diseases of turkeys, roup, colds, crop bound, etc., are treated the same as for chickens.

Guineas can be started the same as chicks. They do well on commercial chick starters or can be given bread crumbs and rolled oats. They are great foragers and insect eaters and if given a good grassy range they will collect a large part of their ration and often a small feed of commercial chick grain will be all they need. They can be given cracked corn and wheat as soon as their size permits.—R. G. Kirby.

Let Ducklings Run

I am feeding my little ducks oat meal, also bran moistened with sweet milk. Frequently I find some dead, others lying on their backs.—W. H. W., Cecil County, Md.

Ducklings sometimes have fits or dizzy spells which are usually caused by some form of digestive disorder. It occurs most often to ducklings that are penned in small yards where there is not sufficient green food. Eating moldy feed often causes digestive troubles among ducklings. Ducklings may die after long exposure to very hot sun. The protection of orchard trees is a great help in keeping them healthy.—R. G. Kirby.

Our Chicks Stagger

Can you tell me what to do for young peeps that stagger? I give a mixed ration, lots of pure water, all the milk they want and lots of range. They have no diarrhea.—O. M. F., Centre County, Pa.

The weakness and loss of vigor may be due to indigestion caused by moldy feed or leg weakness resulting from too long confinement on the brooder house floor without pure sunshine. Using 1 per cent cod liver oil in the mash helps to prevent leg weakness. Chicks may become blind due to the irritation of bits of straw litter or hulls which may lodge under the eyelid. Dusty brooder house litter causes some eye troubles.

A sudden loss of many month-old chicks might be due to some poisonous or spoiled material on the range which they have eaten. R. G. Kirby.

Chickens in the Fruit Country

Franklin County, Pa., is noted for its fruit, but it also has some good poultry. These Leghorns on Clearview Farm are owned by Guy W. Kitzmiller.

Why Take Chances?

The Eastern States Farmers' Exchange is owned by farmers, operated by farmers, and dedicated to serve the interest of these owning and operating farmers. The full significance of all this is just beginning to be appreciated. Until recently thousands of farmers have regarded the Eastern States Farmers' Exchange as just one more grain company. Today these farmers see in it many distinguishing features. Here are some of them.

The Exchange being owned entirely by users of the commodities distributed by it seeks profits only for these users—the farmer feeders.

In selecting feed ingredients and formulae for its rations it is guided solely by the thought that it must secure the greatest feeding value obtainable per dollar spent. To accomplish this important aim, the buying is done by experts, men whose aim is to take care of the best interests of their employers, the farmer members acting through their Executive Committee.

The laboratory at the Eastern States mill tests carefully all incoming and outgoing materials to make certain that quality standards are maintained and that the members get full value.

The powerful magnetic separator guards the cattle fed Eastern States rations against dangers from nails, wire, etc., so apt to creep into rations through sacked ingredients.

The service to poultrymen at this season of the year is of almost inestimable value. To know that the corn goods and oat goods are quality—the corn low in moisture and clean, the ground oats 40 lb. clipped naturals, and the rolled oats the best table variety—to know these things not because they look good to the eye but because they test well in the laboratory, is worth a lot to poultrymen.

At a time when quality buttermilk is difficult to secure it is reassuring to know that in the Eastern States Buttermilk Egg Mash and Growing Mash certain specific quantities of quality pure dried buttermilk are always being used.

Why take chances? Why purchase at Exchange prices feeds and ingredients selected by others when you can secure at Eastern States prices, feeds and feed ingredients specifically chosen with your interests in mind by your own employees?

For information on the strictly cooperative Eastern States feed service, a service which should not be confused with car-door service offered through local groups by private manufacturers, write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization, owned and controlled by the farmers it serves.

GIVE THE BEES ROOM

Put on Supers As Fast As They Are Needed

WHEN the first super is partly filled and the bees have begun to cap the honey in the central sections, another super should be given under the first. About the time that this second super is partly filled and capping begun the first will be mostly capped and ready to remove when a third super should be given. Added supers should always be placed underneath until the peak of the honey flow is reached, after that if room is given it should always be on top.

The reason for this change is that the bees will always build comb more rapidly next to the brood nest. If supers are given toward the end of the honey flow they should be on top so that the bees will be sure to continue to work on the combs already started, otherwise a lot of unfinished sections may result.

Extra strong colonies such as are found in the two-story hives, in packing cases or any adequately insulated hives are best operated by the Miller method or the following modification of that method.

Use This Method

Take the hive apart and fill the lower brood chamber full of combs of brood. Shake most of the bees out of the upper brood chamber and be sure that the queen is left with the colony. Put on comb honey supers and follow the method of supering as described in the other method.

The upper brood chamber, better known as the food chamber, will contain some brood, some old honey and a few bees. Place it on a colony that is too weak to produce comb honey where the combs will be filled with honey for winter food for the original colony. Three or four such food chambers from as many colonies may be placed on one colony.—Geo. H. Rea.

Light and Heavy Capons

IF YOU are interested in growing capons the first thing is to find out whether your market prefers the lighter kind, weighing from 7 to 10 pounds, or the heavy birds weighing more than 10 pounds.

If you decide to grow the small capons, Plymouth Rocks, Rhode Island Reds, Wyandottes or one of the other American breeds will be most satisfactory, according to J. C. Taylor of the Pennsylvania State College.

Light Brahmas, Jersey Black Giants or Orpingtons are satisfactory breeds for producing large capons. Not more than one bird in twenty should die following the caponizing operation if all conditions are right.

Almost an Egg a Day

THE White Leghorn flock of 173 hens, owned by S. G. Green, of Bradford County, laid an average of 28.8 eggs per bird in April. This is the highest record in Pennsylvania for April, among flocks on which records are kept under the supervision of State College.

The heaviest laying flock of pullets was owned by Charles C. Luehm, of Allegheny County. His 150 White Leghorn pullets averaged 23.3 eggs each for the month.

* * *

Young Mr. Bean was interviewing his sweetheart's father on the subject of marrying the young woman.

"Where are you employed?" asked the old gentleman suspiciously. "Have you any chance for promotion?"

"Oh, the best in the world," replied young Bean with enthusiasm. "Except for the office boy, I now hold the lowest position in the firm."

CLEAN MILK is just one of a number of advantages you get with the

De Laval Milker

It also gives you
—Better Milking
—More Milk
—With Less Labor
—Without Injury to Your Cows

There are three distinct considerations in the selection of a milking machine—**your cows, yourself and your milk.**

In all of these considerations the De Laval is **superior to any other method of milking, either hand or machine.**

With a De Laval Milker you can do the entire milking operation, from start to washing up, in less time than with any other machine. **It milks faster and is simple and easy to wash and keep clean.**

The most important consideration in the selection of a milker is the effect it will have on the cows. In a recent questionnaire received from 1160 users in 47 states, more than **98% said their cows produced as much or more milk with a De Laval than they did by hand milking. 58% said their cows produced more milk when milked the De Laval Way.**

More cows are now being milked with De Laval Milkers than with any other machines—and during the ten years they have been on the market **we have never known of a single case of injury as a result of De Laval milking.**

The De Laval Milker saves more time and requires less attention to operate. It is practically **foolproof. The pulsator has only one simple moving part. It never requires oiling or adjustment.**

If you are milking five or more cows a De Laval Milker will soon pay for itself. Sold on easy terms.

1 The only parts of a De Laval Milker that require washing

2 98% of the De Laval users say they get as much or more milk than they did by hand milking

See it Work!

Get motion picture views of Blizzard Ensilage Cutter

Seeing is believing. So most of the pictures in the Blizzard catalog are views of this wonderful machine in action. You see Fordson running Cutter; two men throwing bundles of corn off load and Cutter feeding itself; you see it elevate over 125 feet; you see parts enclosed in steel cases, gears running in oil, steel slat apron working on rollers. Also you read the remarkable records of Blizzard in service: How one cutter filled 20 silos in 10 days; another filled a 10 x 34 silo in three hours; another filled 2 silos, 10 x 36 and 8 x 36, in less than 9 hours. You read of unusual satisfaction expressed in such statements as: "Cut our silo filling cost in half"; "One man easily operates tractor and cutter"; "Better work, more capacity, easier operated than any cutter I have ever operated or seen operated"; "We run with Fordson and averaged one silo a day."

Dr. Clark's Purity Milk Strainer

There's No Excuse for Dirty Milk!

Why tolerate the dirty milk evil when it isn't necessary? Dr. Clark's Purity Strainer removes every particle of dust and sediment from milk at time of straining. That's our guarantee or your money refunded.

Thousands of farmers, dairies, creameries, condensaries, etc., use and endorse Purity Strainers. Approved and recommended by U. S. Government. Saves time and labor. Ask your dealer. If he hasn't the Purity Strainer, write us for literature and prices, being sure to give your dealer's name and address.

PURITY STAMPING CO.
Dept. B Battle Creek, Mich.

What a University test proved

Capacity—size C, 17 to 30 tons per hour: power at 19 tons, .686 H. P. per ton, running at only 465 R. P. M. *Less power per ton than any other cutter tested.*

GEHL SILO FILLER *Broke all Power Records at University Tests*

Its record proves our claim of Big Capacity—Low Speed—let it show you on your own farm.

Low speed means less power—longer life because less vibration.

An all steel machine—steel boiler plate flywheel—can't burst—all gears inclosed and running in oil—absolutely self-feeding. The smoothest running cutter built. Give us the size and name of your engine and we will tell you about the right size Gehl Cutter for your requirements.

A Cow Sale Where There Wasn't a Bid Made!

BANKERS don't very often go into the livestock business, but a Union County bank recently put on a cattle sale for the benefit of dairymen who have lost animals thru the tuberculin test. The Union National Bank of Lewisburg, Pa., cooperating with County Agent L. E. Craumer, brought in 20 head of fine Holsteins and financed their distribution to local dairymen.

The cattle were selected from herds in Crawford County, where all herds have been tuberculin tested. Each animal was of excellent type and had a record of high production or came from high producing ancestors.

The unique feature of the public sale at which these cattle were distributed was the fact that there was no bidding. As each animal was brought into the ring the price was announced. This figure covered only the cost and the expenses of transportation and of the sale.

Buyers drew lots for the cows they wanted at this Union County sale.

A box was passed and every person wishing to buy the animal dropped his name in the box, on a card prepared for the purpose. The box was shaken, a card drawn out, and the animal went to the man whose name was on the card. There were 23 names in the drawing for the last cow offered.

Purchasers could get 60-day credit without interest, by giving a judgment note with approved security. The bank announced that it would renew the first note with the consent of the surety and at the usual interest rate.

There were 200 farmers at the sale. The 20 cattle went to 18 different farmers and in a number of instances constituted the first purchase of a purebred animal. At the close of the sale a large number voted favorably on a proposition to bring in more cattle for distribution on the same plan.

The president of the Union National bank is F. M. Simpson. The bank committee in charge of the sale was LeRoy Butler, cashier, Cloyd Steininger, and J. L. Rietz. Mr. Steininger and County Agent Craumer selected the cattle in Crawford County and directed the sale.—E. B. F.

From the Week's News

The New Jersey Department of Weights and Measures condemned and confiscated 14,100 scales, weights and measures during its last fiscal year. Most of them were cheaply constructed scales which became inaccurate after being used for a short time.

More than a quarter of a million forest trees, most of them furnished by the State Department of Forests and Waters, were set out in planting demonstrations in Pennsylvania this spring. County agents and State College men staged these reforestation demonstrations in forty counties.

Horse pulling contests will be in vogue again this year in Pennsylvania. The first one for 1926 will be held on the Schuylkill County Fair Grounds, Saturday, June 12, as a part of the program of the Annual Farmers' Field Day arranged by County Agent W. L. Bollinger.

County Agent McWilliams of Cambria County reports a decided increase in sweet clover planting in his territory. Local seed stores handling sweet clover seed have had difficulty in keeping up with the demand for the seed of this soil improving legume.

Real lawyers will give a legal atmosphere to the event if the plans of County Agent Edinger for a scrub bull trial are carried out. The trial is scheduled to be held in connection with the Field Day and Dairy Show, near Carlisle, Cumberland County, Pa., on August 12th.

The U. S. Department of Agriculture has promulgated official grades for barley, which are based not only upon variety but also upon the section of the country in which the grain is grown. Standard grades had previously been established for corn, wheat, oats and rye.

Inter-State Milk Prices

THE Philadelphia price of milk, in effect June 1, as quoted by the Inter-State Milk Producers' Association, is as follows: For 3 per cent milk, basic quantity, $2.71 per 100 pounds; 5.8 cents per quart. Class 1, surplus, $2.10 per 100 pounds; 4.5 cents per quart. Class 2, surplus, $1.77 per 100 pounds; 3.8 cents per quart. The differential is 4 cents for each tenth point and 2 cents for each half-tenth point up or down in butterfat test.

PRINCE ALBERT
CRIMP CUT
LONG BURNING PIPE AND CIGARETTE TOBACCO

Don't tell *me* you can't smoke a pipe!

I'M HERE to say that you *can*. And it isn't a matter of perseverance, either. Let me give you a page out of my own book. I used to think that *I* would never be able to smoke a pipe. That is, and enjoy it. I was doing an "off again, on again, Finnegan" with first this tobacco and then that.

Then I made a discovery! A friend of mine suggested that I try a load of his Prince Albert. (*I'll* say he was a friend!) I tried it, and I want to go on record here and now that no other pipe tobacco ever tasted like that before. I tried a second load, to be sure my taste wasn't kidding me.

The second load tasted even better than the first. I knew that I had found the one tobacco for *me*. That was seven years ago, and I've been a Prince Albert regular ever since. P. A. is so cool and sweet and fragrant, so genuinely friendly, you just want to hit it up from morning to midnight (and do!).

P. A. doesn't bite the tongue or parch the throat. That's one of the reasons I've stayed with it these years. I know just what you're going through, Old Man. Just tear a leaf out of *my* book. Get yourself a tidy red tin of good old P. A. today. No friend ever gave you better advice.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

THE Philadelphia price of milk, in effect June 1, as quoted by the Inter-State Milk Producers' Association, is as follows: For 3 per cent milk, basic quantity, $2.71 per 100 pounds; 5.8 cents per quart. Class 1, surplus, $2.10 per 100 pounds; 4.5 cents per quart. Class 2, surplus, $1.77 per 100 pounds; 3.8 cents per quart. The differential is 4 cents for each tenth point and 2 cents for each half-tenth point up or down in butterfat test.

See it Work!

Get motion picture views of Blizzard Ensilage Cutter

Seeing is believing. So most of the pictures in the Blizzard catalog are views of this wonderful machine in action. You see Fordson running Cutter; two men throwing bundles of corn off load and Cutter feeding itself; you see it elevate over 125 feet; you see parts enclosed in steel cases, gears running in oil, steel slat apron working on rollers. Also you read the remarkable records of Blizzard in service: How one cutter filled 20 silos in 10 days; another filled a 10 x 34 silo in three hours; another filled 2 silos, 10 x 36 and 9 x 36, in less than 9 hours. You read of unusual satisfaction expressed in such statements as: "Cut our silo filling cost in half"; "One man easily operates tractor and cutter"; "Better work, more capacity, easier operated than any cutter I have ever operated or seen operated"; "We run with Fordson and averaged one silo a day."

There's No Excuse for Dirty Milk!

Why tolerate the dirty milk evil when it isn't necessary? Dr. Clark's Purity Strainer removes every particle of dust and sediment from milk at time of straining. That's our guarantee or your money refunded.

Thousands of farmers, dairies, creameries, condensaries, etc., use and endorse Purity Strainers. Approved and recommended by U. S. Government. Saves time and labor. Ask your dealer. If he hasn't the Purity Strainer, write us for literature and prices, being sure to give your dealer's name and address.

PURITY STAMPING CO.
Dept. B Battle Creek, Mich.

What a University test proved

Capacity—size C, 17 to 30 tons per hour; power at 19 tons, .688 H. P. per ton, running at only 465 R. P. M. *Less power per ton than any other cutter tested.*

GEHL SILO FILLER *Broke all Power Records at University Tests*

Its record proves our claim of Big Capacity—Low Speed—let it show you on your own farm.

Low speed means less power—longer life because less vibration.

An all steel machine—steel boiler plate flywheel—can't burst—all gears inclosed and running in oil—absolutely self-feeding. The smoothest running cutter built. Give us the size and name of your engine and we will tell you about the right size Gehl Cutter for your requirements.

GEHL BROS. MFG. CO.

Don't tell *me* you can't smoke a pipe!

I'M HERE to say that you *can.* And it isn't a matter of perseverance, either. Let me give you a page out of my own book. I used to think that *I* would never be able to smoke a pipe. That is, and enjoy it. I was doing an "off again, on again, Finnegan" with first this tobacco and then that.

Then I made a discovery! A friend of mine suggested that I try a load of his Prince Albert. (*I'll* say he was a friend!) I tried it, and I want to go on record here and now that no other pipe tobacco ever tasted like that before. I tried a second load, to be sure my taste wasn't kidding me.

The second load tasted even better than the first. I knew that I had found the one tobacco for *me.* That was seven years ago, and I've been a Prince Albert regular ever since. P. A. is so cool and sweet and fragrant, so genuinely friendly, you just want to hit it up from morning to midnight (and do!).

P. A. doesn't bite the tongue or parch the throat. That's one of the reasons I've stayed with it these years. I know just what you're going through, Old Man. Just tear a leaf out of *my* book. Get yourself a tidy red tin of good old P. A. today. No friend ever gave you better advice.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

UNITED STATES TIRES ARE GOOD TIRES

Gathering Rubber Latex

The United States Rubber Company owns and operates the largest producing rubber plantation in the world. The company's properties in Sumatra and Malaya comprise 136,000 acres with over 7,000,000 trees and give employment to 20,000 people.

Four of the eight Sprayed Rubber Producing Units on the United States Rubber Company's largest plantation at Kisaran, Sumatra. More of these plants for producing Sprayed Rubber are being built throughout the Far East by the United States Rubber Company.

Answering some Questions about the New "Sprayed Rubber"

Q—What is Sprayed Rubber?

A—It is an entirely new form of crude rubber produced from rubber latex without the use of smoke or chemicals.

Q—Who produces it?

A—The United States Rubber Company.

Q—Where?

A—In Java and at its rubber plantations in Sumatra and on the Malay Peninsula, by means of a special patented process discovered by its technical staff and by means of special patented apparatus also designed by United States Rubber Company technicians.

Q—What are its advantages?

A—It is used in just the same manner as any other form of crude rubber but being produced without the use of smoke or chemicals, it is cleaner, more uniform in texture and has a higher tensile strength.

Q—Is it used in building U. S. Tires?

A—Yes. Millions of pounds of it have been used and more and more will be used all the time as new plants for producing it are completed by the United States Rubber Company in the Far East.

Q—Does the United States Rubber Company make Sprayed Rubber only from rubber latex from its own plantations?

A—No. The Company considers that Sprayed Rubber is markedly superior to rubber derived from latex by the old methods. Therefore it has located factory units for producing Sprayed Rubber in various rubber producing areas in the Far East, thus supplementing the supply made from the latex from its own trees.

Going to Guernsey

NEXT year the American Guernsey Cattle Club will be fifty years old. The members are planning a birthday celebration in the form of a trip to the Island of Guernsey, the native home of Guernsey cattle.

The annual meeting of the club will be held on May 11 next year, and on the following Saturday, May 14, several hundred of the members will sail from New York City on a specially chartered ship. Anyone interested in making the trip can secure information from The Secretary, American Guernsey Cattle Club, Peterboro, New Hampshire.

The Island of Guernsey is one of the Channel Islands, lying in the English Channel between England and France. The group includes also the Islands of Jersey and Alderney, the native home of Jersey cattle.

Guernsey is about 9 miles long and 3 to 4 miles wide. Its chief industry besides the breeding of fine cattle is the raising of fruits and vegetables for the London market.

THE following bulletins have been issued recently by the Pennsylvania Department of Agriculture:

No. 413—Greenhouse Fumigation.

No. 414.—European Corn Borer Control and Quarantine Regulations.

No. 415.—Report of Seed Analysis, 1925.

No. 416—Pennsylvania Weeds.

No. 417—The Mexican Bean Beetle in Pennsylvania.

No. 418—The Peach Tree Borer and Its Control.

Copies of any of these bulletins may be obtained free by writing to the Pennsylvania Department of Agriculture, Harrisburg, Pa., and asking for them by name and number.

Only a Pint Needed

IF A CERTAIN Holstein cow had produced a pint more milk during April, there would have been a tie for first place among producers in Pennsylvania cow testing associations for that month.

A registered black and white cow owned by W. Drumheller, of the Carbon-Lehigh Association, produced 2814 pounds of milk in April, while another purebred Holstein, owned by W. H. Landis, of the Montgomery Association, produced 2813 pounds. A third Holstein owned by L. A. Zimmerman, of the Carbon-Lehigh Association, lead all the association cows in butterfat production, with a record of 93.9 pounds for the month.

Young Folks to Travel

FOUR hundred Pennsylvania boys and girls will attend the seventh annual Young Farmers' Week at State College, June 16 to 19th. During the week county judging teams will compete for the honor of representing the Keystone State at the big livestock, dairy and poultry shows this year.

Winners in the livestock judging contests will take part in the junior contests at the International Livestock Exposition in Chicago next fall. The best dairy cattle judges will go to the National Dairy Exposition in Detroit, and the boys or girls who win in the poultry judging contests will take part in the junior contests at the National Poultry Show in New York City.

"profits are made on *high yearly production*"

Penn State Bulletin

"The pasture season is welcomed too often as the time when a clear profit can be made on milk and when grain feeding is thought unnecessary" says a recent bulletin from Penn State College. "Profits are not made on high production during the pasture season alone but on high *yearly* production. Grain feeding to cows on pasture is absolutely essential for high yearly production."

In the records of 48,000 cow testing association cows summarized and reported to the American Dairy Federation meeting at Washington, D. C., in April, it was shown that for every increase of 50 lbs. of butterfat in yearly production a cow returns $16 more in profit over feed. Fifty pounds of butterfat means about 1400 lbs. more milk per year.

In the records from which Cornell bulletin 441 is drawn it is shown that on 39 farms where grain was fed on pasture the average production per cow for the year was 6932 lbs. of milk. On 26 other farms where the cows were fed no grain in the pasture season, the cows produced an average of 5510 lbs. of milk per year. The difference in favor of the cows fed grain in summer was 1422 pounds of milk per cow, 25 percent more than was produced by the cows on pasture alone.

The College Feed Conference Board (the dairy extension men of the agricultural colleges of the East) recommends 16 and 20 percent protein on pasture. AMCO FEED MIXING SERVICE follows this recommendation in making available to you Amco 16% Dairy and Amco 20% Dairy Feed, mixed on Conference Board formulas.

Feed Amco 16% Dairy in early summer and Amco 20% Dairy when pastures begin to dry up a little. Feed enough to maintain all summer what the cows give when they respond to the first flush of pasture. Don't let them go down in weight or production.

Amco Feed Mixing Service puts these two wonderful summer feeds before you at prices that will surprise you considering the high quality of the ingredients and their variety.

These low prices are made possible by the tremendous buying volume of the American Milling Company, the continuous operation of its modern, efficient mill and the low distribution cost of the Amco Dairy Feed Service.

INTENTIONAL SECOND EXPOSURE

OUR YOUNG PEOPLE'S FORUM.

Cousin Ruth's Letter

TO ALL WHO READ THE FORUM, GREETINGS:—There's so much Forum mail piling up on my desk that I'm afraid I'll never find time to answer each letter as it deserves. This letter is especially to you who've written and have been patiently awaiting answers this long time, to Helen, of Boswell, Pa., who wants to know more about our club; to Ruth, of Robbinsville, N. J., who asks to become a member; to Estelle, of Pennington, N. J., whose family of seven wishes to join; to Edna, of Rockwood, Pa., who is anxious to write letters; to Meha, of Troutville, Pa., who wants to be one of us, and to many others who would like to join and don't know how.

Any boy or girl who sends in a contribution of any kind, letter, picture, drawing, original poem, anything that will interest other boys and girls, becomes a Forum Friend. But each week those who send in particularly good contributions are selected as Forum Members and receive a membership pin. The size of the pin doesn't really express the size of my appreciation for the help that members give but with each one goes a great big "thank you" for making our page interesting.

There are many things that happen just to you. These are the the things that I like to have you write about; the pets you have, their tricks, the picnic down in the woods, the last day of school, the games you play, the trips you take and the work you do. Every day is full of interesting things if we only look for them. Write me often. I like to know about the good times you enjoy and the work that keeps you busy.

Let me hear from all those who haven't written and from those who have, again and again. Address all mail to Cousin Ruth, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

COUSIN RUTH.

Letters from Forum Friends and Members

Dear Cousin Ruth and Forum Friends:—We have ten acres of pasture ground which is very beautiful at this time of the year. There is a stream flowing thru the middle of the meadow and extends from one end to the other.

We have eleven cows but only milk nine of them. They give about 100 pounds at a milking.

We have a big dairy on the farm where we live. There are many men working at the dairy. The milk is pasteurized and delivered for many miles around. It is taken to the city, too. Our farm is about one-fourth of a mile from the city. It is located east of Lancaster. The Prison Park is not far from where I live.—Florence Striggle, nine (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—The measles are in school now. My brother just got over them. I had them when I was smaller. Did you have them, Cousin Ruth?

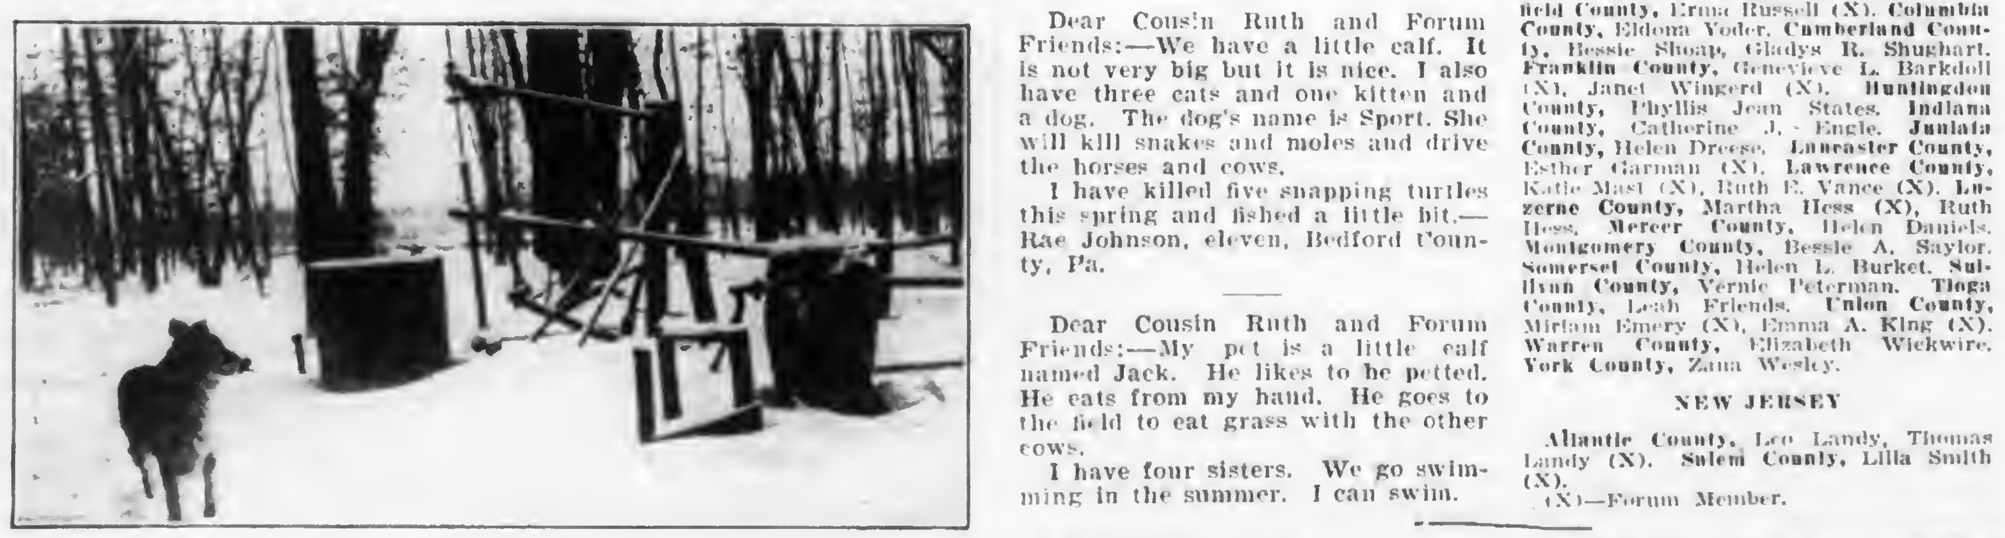
This year we got 400 baby chicks and over 100 died for us. The first few mornings when my father came in for breakfast he would say, "I had a peepy funeral again. Ha! Ha! Ha!"

Cousin Ruth, isn't it beautiful out to see the trees in blossom and getting leaves?—Verna Kaufman, eleven (X), Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—We have lots of work on our farm. We farm and also go to market. I wish Cousin Ruth could come to our place in summer and go along in swimming with us. The big Chiquies Creek passes close to our house and we sure have fun.

We were in Philadelphia once but we were not at Pennsylvania Farmer's home. I sure would enjoy going there sometime, when Cousin Ruth is very busy with our letters.

My little brother has a pet dog. Whenever they are playing together, and the dog gets too rough, he begins to cry, then the dog goes away and is not so rough.



ROVER OUT IN THE SNOW
Marian Collins, (X), Venango County, Pa.

I was out for arbutus this year but did not get so very much. We have a small woods and there are always very many shooting stars in it.—Esther Garman, fourteen (X), Lancaster County, Pa.

Dear Cousin Ruth:—I have a dog called Rover. He will be ten years old his next birthday. He is a large dog but does not look it in the picture.—Marian Collins, (X), Venango County, Pa.

Dear Cousin Ruth and Forum Friends:—There is a little wren building in a little house my brother made. Brownie, our dog, likes to catch the ball when I throw it up in the air and he likes to chase the cows in from pasture. One cow gets after him. I taught him to do a lot of tricks.

Cousin Ruth, I would like you to come see me some time. I have one brother and three sisters and they are all big so you know I am lonesome.

We have a good many chicks and one little one follows me everywhere I go. Cousin Ruth, do you like to go horseback riding? If you do, I wish you would come up to my place and we would go some place. I guess you will be glad when summer comes. I know I will be glad because you can get in the water. If you swim I wish you would teach me. I won't be glad when harvest comes because I have to work a lot.

There is a woods right next our school ground and every spring we go there and gather flowers and little ferns and a lot of other things. We have a place cut out in the ground filled with sawdust and two poles standing up and the boys and girls jump. I like to jump and play in the sawdust. There is a meadow down across the road and you have to climb down to get to it. There are a lot of steep rocks and trees and thru the meadow runs a pretty big stream of water and there are a lot of shade trees along it and we school children go down and eat our lunch. I have to take my lunch along with me because it is too far to go at dinner time. I have a half mile to walk to the schoolhouse.—Genevieve L. Barkdoll, ten (X), Franklin County, Pa.

I would love to go horse back riding with you but how can I find time to come? Reading Forum letters and doing other things for Pennsylvania Farmer keep me busy. I'm not much of a swimmer. Do find someone to teach you. I wish I really knew how.

Dear Cousin Ruth:—We have two dogs for pets, and a bird. The puppy's name is Tipple, she is a rabbit dog; the other is Sally, a Collie. The bird's name is Nellie.

There are some little wrens building their nest in a bird house my brother made three years ago. They built their nest in it last year. I don't know whether they will ever get it done, the sparrows keep tearing it out as fast as they can build it.

There is a pair of yellow birds around the maple trees in the yard. They most always build their nest in the tree that has the most leaves.

How many Forum friends have pet birds?—Lydia Page, twelve (X), Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—We have a little calf. It is not very big but it is nice. I also have three cats and one kitten and a dog. The dog's name is Sport. She will kill snakes and moles and drive the horses and cows.

I have killed five snapping turtles this spring and fished a little bit.—Rae Johnson, eleven, Bedford County, Pa.

Dear Cousin Ruth and Forum Friends:—My pet is a little calf named Jack. He likes to be petted. He eats from my hand. He goes to the field to eat grass with the other cows.

I have four sisters. We go swimming in the summer. I can swim. I like to fish in the still water.—Ruth Hess, thirteen, Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—School was out April 24 and since then I have been helping mother. I am the only one home at present. One sister is going to high school, while my other two sisters are away.

SISTER AND I
Frances Baluta, Luzerne County, Pa.

Bob, our dog, likes to hunt rabbits and other wild game in the forest when hunting season comes.—Vesta L. Peters, twelve, Adams County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You've all played checkers, haven't you? Then, of course, you know that you can move your pieces only diagonally. Now, in the case of this week's puzzle, you may move from one letter to the next, but you may not jump over any black spaces. It's like this: you begin with the letter "A" in the lower left hand corner, the following letter must be "R," but whether the next one is "M" or "O"—well, I'm just not going to tell you that—that's for you to find out. If you take the letters in the correct order they will form a sentence which is a famous saying, familiar to most of you. Now, stick right at this puzzle, and when you have found the answer, send it to me on a POSTAL CARD so that it reaches me by June 19th. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks are very careless and make simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the May 22 issue of Pennsylvania Farmer is: TALL OAKS FROM LITTLE ACORNS GROW.

The puzzle prize winners are: Ethel Bond, age 10, Shickshinny, Pa.; Mary Jane Coyle, age 8, Lancaster, Pa.; Edith Crosser, age 10, Smithdale, Pa.; Clarence Gummo, age 7, Port Matilda, Pa.; Nova Kaltreider, age 11, Brodbecks, Pa.; Helen Karal, age 9, Nemacolin, Pa.; Edna Mabey, age 12, Towaco, N. J.; Evelyn Ridenour, age 8, La Belle, Pa.; George Shillady, age 8, Glen Moore, Pa.; Audrey Smith, age 9, Hobbs, Md.

The Honor Prize winner is: Ruth Gregory, age 7, Weatherly, Pa.

Shall Our Boys Learn to Cook?

Three Readers Answer in the Affirmative

EDITOR'S NOTE:—In a recent issue Mrs. Williams, of New York, asked for Page opinions on the problem, "Shall our boys learn to cook?" Three of our readers have answered the query, all of them agreeing that the boy should cook. It would be very inspiring to hear from some of the men of Our Family, for the ladies keep telling how their husbands read and enjoy our page. Perhaps the notes in this issue will incite response from some of the one-time boys who learned to cook, or didn't. Maybe some one has a brother now a famous chef or a renowned confectioner!

* * *

I have a brother near my age who always wanted to do everything I did. He was just as clever in fancy work and sewing, and could cook as well as any girl. I would advise any mother of boys to teach them everything they want to learn. Cooking often comes in very handy for a man who has learned the principles of preparing food.—Mrs. D. W. Miller, Pa.

* * *

My grandmother had four boys—the eldest eighteen years old when she passed on leaving a three-day-old baby sister. An aunt raised the babe, and the four boys continued to live with their father. The second lad was sixteen, and he did the cooking. He had always been mother's helper, and was able to prepare all sorts of vegetables and meats. He could bake pies, cakes and the finest breads of wheat, corn or rye flour. Two years later these boys were bereft of father, too, then this boy cooked for the three brothers.

The boy was my father, and he taught me many things about cooking. My mother was very frail, and father helped greatly when we had a table surrounded with eaters and a table full of good wholesome food. If you teach the boys to do housework, you make them more appreciative. You are training them to be good husbands.—Clarice Raymond, N. Y.

* * *

Many a man has found himself sorely tried when his wife became ill suddenly. The kiddies must be properly fed, and the sick one, too, yet he has never been taught anything about food and its preparation.

The average boy has considerable leisure, part of which could be spent profitably helping mother and learning to cook.

I believe it is a duty mothers owe to future mothers—this idea of teaching all boys something about preparing a dainty slice of toast and a real cup of tea.—Mrs. E. M. Anderson, N. Y.

My White Petunias

IF YOU have little time for flowers, try the petunia. Last year two fine plants came up among the vegetables in the garden rows. I guarded them carefully, and when the vegetables had all been pulled, gave them more room. One of those plants grew until it measured four and one-half feet across, and the other was just a trifle smaller. From midsummer till October frosts those plants were continuous masses of white flowers, especially beautiful in the moonlight.—Owl Hollow Housewife, Pa.

Editor's Note:—The fragrance of the petunia adds to its charm, and if you enjoy humming birds and butterflies, this is a fine way to entice them, and have them for frequent visits. And do you know, petunias grow anywhere with scant cultivation? Sow them freely in those places where weeds have made you miserable, and you will have the gayest nooks and corners.

Money in Straw Flowers

A FRIEND made thirty-five dollars last year selling straw flowers. She had a very small plot and sold every flower grown. Those with very short stems were carefully wired and wires covered with green paper. These were really liked best as they could be so easily arranged into graceful bouquets.

Usually the flowers are picked while in bud, and hung heads downward in bunches to dry. It is a good idea to place some across a board or table to dry, then they curve quite naturally.

My neighbor made a few sample bouquets of first buds and used these as samples. She then took orders and made up clusters exactly as her patrons desired. Small bouquets were sold for thirty-five cents, and a large size for fifty cents.—Mrs. L. K. Crowell, N. Y.

Spicy apple cakes that may be made of cooky dough and frosted, are tasty with the morning cup of coffee.

Cleaning Rag Rugs

WHEN washing woven rag rugs, I first clean a large place on the cement drive or wide sidewalk, so that the rug can be moved several times during the process. Lay the rug on this cleaned surface, and when perfectly smooth, give it a good soaking with cold water. When it is wet thru, pour over it a strong suds made with soap or soap powder and hot water. It is then scrubbed crosswise using a stiff broom, care being exercised to have the broom reach the full width of the rug each time it goes across.

When that side is cleansed I turn the rug over and treat the other side in the same way. The rug is then moved to a clean strip of walk to get away from soapy water.

In rinsing I throw cold water on it several times, sweeping it off each time. Moving it often to a clean place is a help and as soon as the water remains clear, the rug is clean.

No attempt is made at wringing, but after all the water possible has been swept out the rug is moved to a clean dry spot and left to dry in sun and wind. If turned over several times it will dry sooner, and not having been wrinkled in the process it will be as straight and true as when it came from the weaver.—Helen Manning, Ill.

Editor's note:—For those of us who do not have cement drives or walks, let us use another method equally good. Lay the rug across a bench and do the scrubbing with a stiff brush. The hot water, good suds, and rinsing water are used as in above article, brushing crosswise with each step in the process. I find hanging across two lines about a foot apart, an excellent drying method and I prefer the shade. If an old rug needs brightening of colors, this is easily done with a brush, too, and that same bench.

The Printing on Bags

THE average housewife can find many uses for the bags in which flour and feed come, but to remove the printing on the sacks is a different matter. The New York State College of Home Economics suggests the following method: Moisten the bags with warm water, sprinkle them with a good soap powder, roll them up, and leave them for several hours; or soak them in a fairly strong soap powder solution. Wash them in warm soapy water and they will be in good condition to use.

The first treatment may not remove all the coloring but if the bags are used and then treated in the same way the first few times they are laundered, the printing will gradually come out. More drastic methods may remove the color with one treatment but they are likely to weaken the fabric, so the slower process is more desirable.

A Good Turn Each Day

THE boy scout's motto, "Do a Good Turn Every Day" was adopted by his sister, Dorothy, and she thought it lots of fun.

One day she wrote a letter to her aunt who was lonesome and that aunt wrote a delightful letter in return. One day she got supper and let her mother sit on the porch and read a few minutes and mother lost that tired look, and read her a story after supper.

Dorothy took a bunch of flowers from the garden to a little girl who was sick. The little girl was very happy, and asked Dorothy to come again to see her.

One day she threaded all of grandma's needles for her, so they would be ready when she wanted to sew. That good deed was thought of while grandma was sewing a button on Dorothy's apron.

It was such fun doing things for other folks, and seeing them smile and say thanks, that Dorothy has been doing a good turn every single day.—Doris W. McCray, Iowa.

These May Be New

WHEN pastry flour is not available, use bread flour allowing three tablespoons cornstarch to enough flour to fill the cup. This makes fluffy delicious cakes.

Applique

In applique work, dip the cloth to be appliqued in cold starch, then lay the design on the garment in the place to be decorated, and press with a hot iron. Basting and ravelling edges are thus eliminated and the buttonhole work is a genuine pleasure. The young daughters learning to sew will enjoy this.

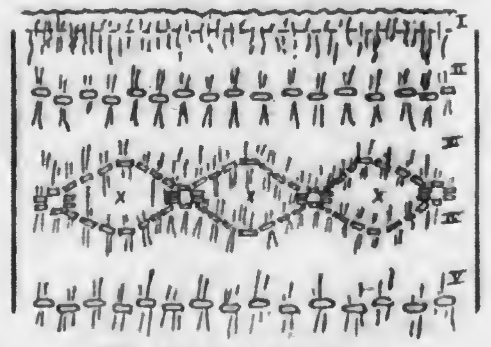
Novel Decoration

Children's aprons and play clothes can be prettily decorated by coloring the outlined design with wax crayons. Press with a hot iron, and the wax melts away, leaving the colors stamped into the fabric. This color will last as long as the material and always looks bright after each washing.—Pauline M. Wood, N. Y.

Smocking Is Easy

SMOCKING is easy and extremely effective. It is simple embroidery stitches with shirring for the basis. Shirring is quickly done on the machine by loosening tension, and sewing with long stitch.

To follow design illustrated, stitch five even rows on wrong side of material. Pull up bobbin thread (right side) desired fulness and fasten. Use cable stitch for rows 2 and 5. Use outline stitch for diamonds, embroidering ON TOP of the shirring gathers. Black thread is very striking for the diamond using some color harmonizing with the frock for the center cross stitch and the cables in rows 2 and 5.



The finished smocking.

Smocking troubles will receive attention if questions are addressed to Home Page Editor, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa. Enclose stamp for reply.

Now Strawberries Are Ripe

Some New Ways to Serve June's Luscious Fruit

By L. M. THORNTON

IN ADDITION to strawberries and cream, and strawberry shortcake there are other ways in which these delicious berries may be served. Try at least three of the following and be convinced:

STRAWBERRY CREAM PUFFS

Put one-half cup butter and one cup water in pan and bring to boiling point. Add one cup flour rubbed smooth in a little cold milk, a dust of salt, and a teaspoon of lemon juice. Cook until smooth, remove from fire and beat in four beaten eggs. Drop by spoonfuls on a buttered tin and bake in a moderate oven.

With a sharp, heated knife make a cut in each cake to hold the filling which is made as follows: Whip one cup thick cream, fold in one cup strawberries that have been mashed and sweetened, and beat until thoroly mixed. An orange spoon is excellent to use in filling the puffs.

STRAWBERRY TRIFLE

Line a glass dish with stale cake. Make a custard of one-half cup milk, one well-beaten egg, two teaspoons sugar and ten drops of vanilla extract. Pour this over the cake. Whip two cups thick sweet cream, add one cup crushed strawberries, pile above the custard and serve either at once or chilled.

FROZEN STRAWBERRIES

Wash and hull three quarts of berries, sprinkle liberally with sugar and let stand one hour. Combine two quarts thick cream with one cupful sugar and dust of salt, add the berries, mashed, and put in freezer to chill. If it is desired to freeze to consistency of ice cream freeze sugar and milk until half frozen before berries are added.

STRAWBERRY TAPIOCA

Heat one quart of berries with a little water until boiling point is reached. Drain off juice and add water to make three cupfuls. Put water with one cup of sugar in pan and bring to boiling point again, add one-half cup minute tapioca and cook fifteen minutes. Chill, put in dishes, cover with the fruit and a crown of whipped cream.

STRAWBERRY CAKE

Put two cups of strawberries in bottom of baking dish and over top sprinkle one cup granulated sugar. Cover with two cups cooked rice. Beat two eggs, add one-half cup sugar, a dust of salt, and two cups of milk heated to scalding point. Pour this over the rice, dust top with cinnamon and bake in a slow oven. Chill and serve either with or without whipped cream.

STRAWBERRY CANAPES

Hull one quart of strawberries and cut large ones in half. Cut sponge cake in squares or circular shape and saute in a little hot butter. Pile strawberries over top of each piece, dust with sugar and serve.

GELATINE STRAWBERRIES

Heat two cups strawberries, one cup water and one cup sugar in pan (do not boil) add two tablespoons gelatine dissolved in cold water. Remove from fire and beat until cool. Add one-half cup cream, whipped, and the stiffly beaten whites of three eggs. Set on ice two hours to chill thoroly.

Among the Vegetables

ONE of my neighbors gave her garden experience at the Pomona Grange. She planted flower seeds near the vegetables to insure the necessary care. Among the onions were bachelor buttons. With the beets she sowed zinnias. Asters were close neighbors of peppers and tomatoes, and cosmos of the bush lima beans. She said, "When the onions were done there was a blue blaze of bachelor buttons which bloomed from the middle of July till late frost. Where the beets had been were double zinnias of all shades from softest lemon color thru to darkest crimson. The asters planted three feet apart were like bushes, one of them having yielded over 200 blooms."

In closing, she quoted a few lines from Longfellow's Flower Song.

"In all places then, and in all seasons,
Flowers expand their light and soul-like wings,
Teaching us by most persuasive reason
How akin they are to human things.
And with child-like credulous affection
We behold their tender buds expand,
Emblems of our own great resurrection,
Emblems of the bright and better land."—Jessie E. Nye, Pa.

Early Christmas Box

IF WE are overworked and nervous before and during the holidays, is not much of it due to hasty shopping? Let us this year arrange to have more time for making Christmas goodies and for decorating the home.

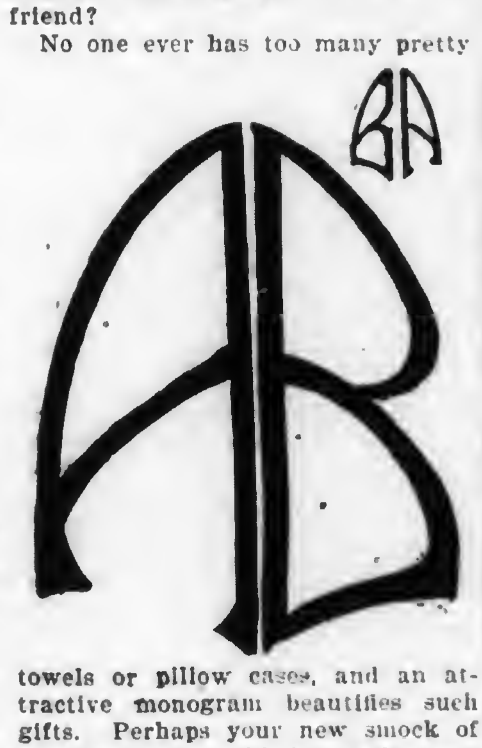
I find it helps to start a gift box early. I select a good-sized box, fitted with lock and key, and in it place a list of friends to be remembered. Women gifted as craft workers are fortunate in being able to make gifts. Hand work is greatly appreciated. By clever painting, doing wax-craft work, burning wood, beating brass, embroidering, knitting, crocheting, hemstitching, etc., beautiful gifts can be made thruout the year.

On each shopping trip, I keep my list in mind, and as I go about thru the stores, often I see the very thing most suitable for some dear one. When December comes along, the box is filled, each one of my list provided for.—Nora Kelley, Pa.

A Distinctive Touch

THE restful porch days are here, and we want to have our pick-up sewing on a nearby table. It will give us pleasant change from the arduous tasks of weeding and house cleaning. Why not plan now for that unusual Christmas gift for sister or friend?

No one ever has too many pretty towels or pillow cases, and an attractive monogram beautifies such gifts. Perhaps your new smock of colorful print could be made even more distinctive by the touch of a monogram made some sunny afternoon. The high school girl would be doubly interested in sewing if she could trim one of her blouses with a bit of gay embroidery.

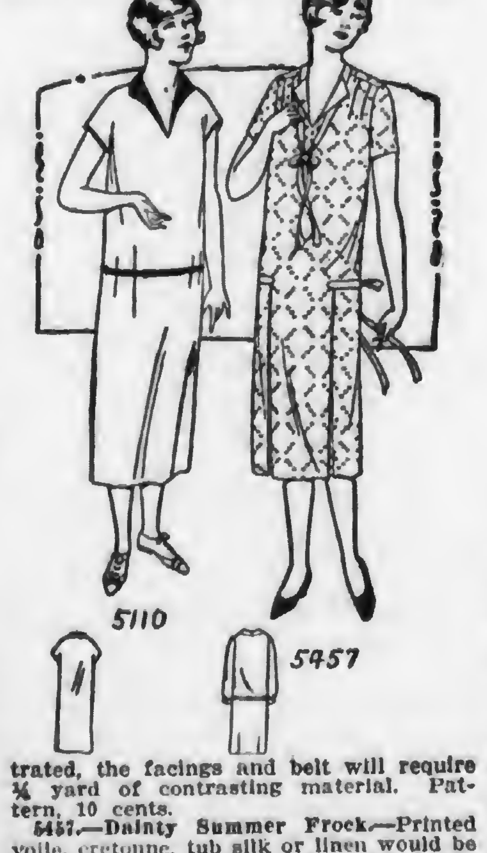


For a complete set of letter patterns send ten cents to the Monogram Department, Pennsylvania Farmer, 261 South Third St., Philadelphia, Pa.

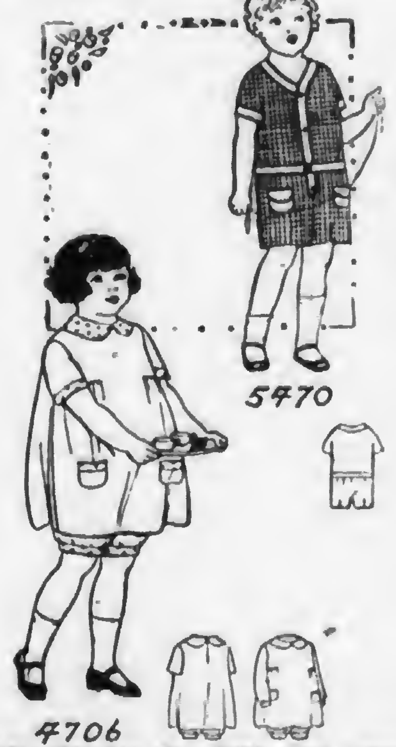
Patterns Chic and New

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5110.—A Simple Model.—Tub silks are attractive for this design. It is also good for flannel, kasha, linen and rep. Three sizes: 16, 18 and 20 years. An 18-year size requires 3¾ yards of 32-inch material if made of one material. If made as illustrated, the facings and belt will require ¾ yard of contrasting material. Pattern, 10 cents.



5457.—Dainty Summer Frock.—Printed voile, cretonne, tub silk or linen would be attractive for this style. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. To make this pleasing model for a 38-inch size will require 4⅝ yards of 40-inch figured material and ½ yard of plain material for facings, collar and belt in sash length. If made with long sleeves 4¾ yards of 40-inch figured material and ½ yard of contrasting material is required. Pattern, 10 cents.



4706.—Popular for Play.—The romper dress here portrayed may be made of pongee, gingham or chambray. Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 2¾ yards of 32-inch material. Pattern, 10 cents.

5470.—For Small Boys or Girls.—Gingham, kindergarten cloth, jersey or linen could be used for this model. Four sizes: 2, 3, 4 and 5 years. A 3-year size requires 1½ yard of 36-inch material, together with ⅜-yard of contrasting material for facings for neck, front, sleeves and for pockets. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

Where else can you buy two wonderful dresses like these for only $1.98. Best of all NO EXTRA CHARGE FOR STOUTS. Figured voile dress is made in popular wide flare bottom style—all the rage this season. Lace and fancy buttons down front attractively trim the neat design and give long slenderizing lines to the figure. Silky finished tan pongee dress is made with popular Tuxedo lapels and beautiful embroidery. Neatly trimmed with fancy buttons and pleats at each side. A remarkable bargain—too good to miss—and you take no risk. SEND NO MONEY—Just send letter NOW. When dresses are delivered pay mailman only $1.98 and a few cents delivery charges. If not satisfied we will return your money. Isn't that fair?

Wool Bed Blankets & Batting

We are now equipped to manufacture your virgin wool into bed blankets and batting at moderate cost to you. Custom work a specialty. Give us a trial.
WEST UNITY WOOLEN MILLS,
107 Lynn St., West Unity, Ohio

LADIES—RIBBON ART BOOK
Make money spare time—Make dainty things in ribbon, ornaments, lingerie. Teaches hat trimming—15c—Bargain in ribbons.
KLEES CO. 1710 Undercliff Ave., NEW YORK

CELEBRATE
the 150th Anniversary of American Independence

Display Old Glory

This year above all you will want to hoist a fresh, clean flag on all national holidays in commemoration of the 150th anniversary of America's Independence. This is the Sesqui-Centennial year.

We Will Furnish The Flags

Send us two subscriptions to Pennsylvania Farmer for the balance of this year and all of next at $1.00 each and we will send you a flag by prepaid post. Given with a single subscription and 75 cents extra.

The flag is 3x5 feet, sewed stripes, warranted fast colors, and absolutely rain proof.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his sick comrade, Private Pelletier. Leaving the sick man, MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." The box had held Deane, the murderer.

Soon a party in search of Scottie Deane appeared. One, Bucky Smith, hated Billy. The party rested but Billy struck the trail. To save the murderer and his wife Billy must keep them out of Smith's hands. He would have to make them his own prisoners. The capture was easy. The party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

A false story of Jim Blake's sent Pelletier on a search which ended abruptly when he found a baby, Little Mystery, in a nearby igloo. After MacVeigh's return, Eskimos came for the child and to save her the men fled. In flight they met Scottie Deane, father of the child. Next day, after the death of Deane, MacVeigh struck south taking Little Mystery to Pierre Croisset's cabin where Isobel awaited her husband. Sick with smallpox she blamed Billy with her husband's death and in fear of "the plague" Pierre and his wife deserted. Billy insists they stay. Pierre knocks him unconscious and leaves. In desperation Billy pursues the half-breeds, strikes a trap-line, faints and wakens to find himself in the cabin of "Rookie" McTabb. McTabb returns with Billy. Indian Joe goes after his mother to care for Isobel.

(Continued from last week)

BILLY'S hands gripped the edges of the sledge at the thought that leaped into his brain. It was Pelletier's thought. If anything happened to Isobel the little girl would be his own, forever and forever. He thrust the thought from him as if it were the plague itself. Isobel would live. He would make her live. If she died—

McTabb heard the low cry that broke from his lips. He could not keep it back. Good God, if she went—how empty the world would be! He might never see her again, after these days of terror that were ahead of him. But if she lived, and he knew that the sun was shining in her bright hair, and that her blue eyes still looked up at the stars, and that in her sweet prayers she sometimes thought of him, along with Deane, life could not be quite so lonely for him.

McTabb had dropped back to his side. "Head hurt?" he asked.

"A little," lied Billy. "There's a level stretch ahead, Rookie. Hustle up the dogs!"

Half an hour later the sledge drew up in front of Croisset's cabin. Billy pointed to the tent.

"The little one is in there," he said. "Go over an' get acquainted. Rookie. I'm going to take a look inside to see if everything is all right."

He entered the cabin quietly and closed the door softly behind him. The inner door was as he had left it—partly open—and he looked in with a wildly beating heart. He could no longer hesitate. He stepped in and spoke her name.

"Isobel!"

There was a movement on the bed, and he was startled by the suddenness with which Isobel sprang to her feet. She drew aside the heavy curtain from the window and stood in the light. For a moment Billy saw her blue eyes filled with a strange fire as she stared at him. There was a wild flush in her cheeks, and he could hear her dry breath as it came from between her parted lips. Her hair was still undone, and covered her in a shimmering veil.

"I've found a trapper's cabin, Isobel, and we're taking the baby there," he went on. "She will be safe. And we're sending for help, for a woman—"

He stopped, horror striking him dumb. He saw more plainly the feverish madness in Isobel's eyes. She dropped the curtain and they were in gloom. The whispered words he heard were more terrible than the madness in her eyes.

"You won't kill her?" she pleaded. "You won't kill my baby? You won't kill her—"

She staggered back toward the bed, whispering the words over and over again. Not until she had dropped upon it did Billy move. The blood in his body seemed to have turned cold. He dropped upon his knees at her side. His hand buried itself in the soft smother of her hair, but he no longer felt the touch of it. He tried to speak, but the words would not come. And then, suddenly, she thrust him back, and he could see the glow of her eyes in the half-darkness. For a moment she seemed to have fought herself out of her delirium.

"It was you—you—who helped to kill him!" she panted. "It was the law—and you are the law. It kills—kills—kills—and it never gives back when it makes a mistake. He was innocent, but you and the law hounded him until he died. You are the murderers! You killed him! You have killed me. And you will never be punished — never — never—because you are the law—and because the law can kill—kill—kill—"

SHE dropped back moaning, and MacVeigh crouched at her side, his fingers buried in her hair, with no words to say. In a moment she breathed easier. He felt her tense body relax. He forced himself to his feet and dragged himself into the outer room, closing the door after him. Even in her delirium Isobel had spoken the truth. Forever she had digged for him a black abyss between them. The law had killed Scottie Deane. And he was the law. And for the law there was no punishment, even tho it took the life of an innocent man.

He went outside. McTabb was in the tent. The gloom of evening was closing in on a desolate world. Overhead the sky was thick, and suddenly, with a great cry, Billy flung his arms straight up over his head and cursed that law which could not be punished, the law that had killed Scottie Deane. For he was that law, and Isobel had called him a murderer.

It was not the face of MacVeigh—the old MacVeigh—that Rookie McTabb, the ex-constable, looked into a few moments later. Days of sickness could have laid no heavier hand upon him than those few minutes in the darkened room of the cabin. His face was white and drawn. There were tense lines at the corners of his mouth, and something strange and disquieting in his eyes. McTabb did not see the change until he came out into what remained of the day, with little Isobel in his arms. Then he stared.

"That blow got you bad," he said. "You look sick. Mebby I'd better stay with you here tonight."

"No, you hadn't," replied Billy, trying to throw off what he knew the other saw. "Take the kid over to the cabin. A night's sleep and I'll be as lively as a cat. I'm going to vaccinate her before you go."

HE WENT into the tent and dug out from his pack the small pouch in which he carried a few medicines and a roll of medicated cotton. In a small bottle there were three vaccine points. He returned with these and the cotton.

"Watch her close," he said, as he rolled back the child's sleeve. "I'm going to give you an extra point, and if this doesn't work by the seventh or eighth day, you must do the job over again."

With the point of his knife he began to work gently on baby Isobel's tender pink skin. He had expected that she would cry. But she was not frightened, and her big blue eyes followed his movements wonderingly. At last it began to hurt, and her lips quivered. But she made no sound, and as tears welled into her eyes Billy dropped his knife and caught her up close to his breast.

"God bless your dear little heart!" he cried, smothering his face in her silken curls. "You've been hurt so much, an' you've froze, an' you've starved, an' you ain't never said a word about it since that day up at Fullerton! Little sweetheart—"

McTabb heard him whispering things, and little Isobel's arms crept tightly about his neck. After a little, Billy held her out to him again, and a part of what Rookie had seen in his face was gone.

"It won't hurt any more," he said as he rubbed the vaccine point over the red spot on her arm. "You don't want to be sick, do you? And that'll keep you from being sick. There—"

He wound a strip of the cotton about her arm tied it, and gave part of what remained to McTabb. Then he took her in his arms again, and kissed her warm face and her soft curls, and after that bundled her in furs and put her on the sledge. Rookie was straightening out the dogs when, like a thief, he clipped off one of the curls with his knife. Isobel laughed gleefully when she saw the curl between his fingers. Before McTabb had turned it was in his pocket.

"I won't see her again—soon," he said, and he tried to keep a thickness out of his voice. "That is, I—I won't see her to—to handle her. I'll come over now and then an' look at her from the edge of the woods. You bring 'er out, Rookie, an' don't you dare to let her know I'm out there. She wouldn't know what it meant—if I didn't come to her."

He watched them as they disappeared into the gloom of night, and when they had gone a groan of anguish broke from his lips. For he knew that little Isobel was going from him forever. He would see her again—from the edge of the forest; but he would never hold her in his arms, nor feel again her tender arms about his neck, or the soft smother of her hair against his face. Long before the dread menace of the plague was lifted from the cabin, and from himself, he would be gone. For that was what Isobel—the mother—had demanded, and he would keep his promise to her. She would never know what happened in these days of her delirium. She would not have to face him afterward. He knew already how he would go.

When help came he would slip away quietly some night, and the big wilderness would swallow him up. His plans seemed to come without thought on his own part. He would go to Fort Churchill and testify against Bucky Smith. And then he would quit the service. His term of enlistment expired in a month, and he would not re-enlist. "It was the law that killed him—and you are the law. It kills — kills—kills—and it never gives back when it makes a mistake." Under the dark sky those words seemed never to end in his ears, and each moment they added to his hatred of the thing of which he had been a part for years.

He seemed to hear Isobel's accusing voice in the low soughing of the night-wind in the spruce-tops, and in the stillness of the world that hung close about him, the words chased each other thru his brain until they seemed to leave behind them a path of fire.

"It kills—kills—kills—and it never gives back when it makes a mistake."

HIS lips were set tensely as he faced the cabin. He remembered now more than one instance where the law had killed and had never given back. That was a part of the game of man-hunting. But he had never thought of it in Isobel's way until she had painted for him in those few half-mad, accusing words a picture of himself. The fact that he had fought for Scottie Deane, and had given him his freedom, did not exonerate Billy in his own eyes now.

It was because of him and Pelletier chiefly that Deane and Isobel had been forced to seek refuge among the Eskimos. From Fullerton they had watched and hunted for him as they would have hunted for an animal. He saw himself as Isobel must see him now—the murderer of her husband. He was glad, as he returned to the cabin, that he had happened to come in the second or third day of her fever. He dreaded her sanity now more than delirium.

He lighted a tin lamp in the cabin and listened for a moment at the inner door. Isobel was quiet. For the first time he made a more careful note of the cabin. Croisset and his wife had left plenty of food. He had noticed a frozen haunch of venison hanging outside the cabin, and he went out and chopped off several pieces of the meat. He did not feel hungry, but put the meat in a pot and placed it on the stove, that he might have broth for Isobel.

He began to find signs of her presence in the room as he moved about. Hanging on a wooden peg in the log wall he saw a scarf which he knew belonged to her. Under the scarf there was a pair of her shoes, and then he noticed that the crude cabin table was covered with a litter of stuff which he had not observed before. There were needles and thread, some cloth, a pair of gloves, and a red bow of ribbon which Isobel had worn at her throat. What held his eyes were two bundles of old letters, tied with blue ribbon, and a third pile undone and scattered.

In the light of the lamp he saw that all of the writing on the envelopes was in the same hand. The top envelope on the first pile was addressed to Mrs. Isobel Deane, Prince Albert, Saskatchewan—the first envelope of the other bundle to Miss Isobel Rowland, Montreal, Canada. Billy's heart choked him as he gathered the loose letters in his hands and placed them, with the others, on a little shelf above the table. He knew that they were letters from Deane, and that in her fever and loneliness Isobel had been reading them when he brought her the news of her husband's death.

He was about to remove the other articles from the table when a folded newspaper clipping was uncovered by the removal of the cloth. It was a half-page from a Montreal daily, and out of it there looked straight at him the face of Isobel Deane. It was a younger, more girlish-looking face, but to him it was not half so beautiful as the face of the Isobel who had come to him from the barren. His fingers trembled, and his breath came more quickly as he held the paper in the light and read the few lines under the picture:

Isobel Rowland, one of the last of Montreal's "Daughters of the North," who has sacrificed a fortune for love of a young engineer.

IN SPITE of the feeling of shame that crept over him at thus allowing himself to be drawn into a past sacred to Isobel and the man who had died, Billy's eyes sought the date-line. The paper was eight years old. And then he read what followed. In those few minutes, as the cold, black type revealed to him the story of Isobel and Deane, he forgot that he was in the cabin, and that he could almost hear the breathing of the woman whose sweet romance had ended now in tragedy.

He was with Deane that day, years ago, when he had first looked into Isobel's eyes in the little old cemetery of nameless and savage dead at Ste. Anne de Beaupre; he heard the tolling of the ancient bell in the church that had stood on the hillside for more than two hundred and fifty years, and he could hear Deane's voice as he told Isobel the story of that bell—how in the days of old it had often called the settlers in to fight against the Indians. And then, as he read on, he could feel the sudden thrill in Deane's blood when Isobel had told him who she was, and that Pierre Radisson, one of the great lords of the north, had been her great-grandfather; that he had brought offerings to the little old church, and that he had fought there, and died close by, and that his body was somewhere among the nameless and unmarked dead.

It was a beautiful story, and MacVeigh saw more of it between the lines than could have been printed. Once he had gone to Ste. Anne de Beaupre to see the pilgrims and the miracles, and there flashed before him the sunlit slope, overlooking the broad St. Lawrence, where Isobel and Deane had afterward met, and where she had told him how large a part the little old cracked bell, the ancient church, and the plot of nameless dead had played in her life. His blood grew hot as he read of what followed the beginning of love at the pilgrim's shrine.

Isobel had no father or mother, the paper said. Her uncle and guardian was an ironmaster of the old blood—the blood that had been a part of the wilderness and the great company, since the day the first "gentlemen adventurers" came over with Prince Rupert. He lived alone with Isobel, in a big white house on the top of a hill, shut in by stone walls and iron pickets, and looked out upon the world with the cold hauteur of a feudal lord. He was young David Deane's enemy from the moment he first heard about him—largely because he was nothing more than a struggling mining-engineer, but chiefly because he was an American who had come from across the border. The stone walls and iron pickets were made a barrier to him. The heavy gates never opened for him. Then had come the break. Isobel, loyal in her love, had gone to Deane. The story ended there.

For a few moments Billy stood with the paper in his hand, the type a blur before his eyes. He could almost see Isobel's old home in Montreal. It was on the steep, shaded road leading up to Mount Royal, where he had once watched a string of horses tacking with two-wheeled coal-carts in their arduous up-hill journey.

He remembered how that street had held a curious sort of fascination for him with its massive stone walls, its old French homes, and that old atmosphere, still clinging to it, of the Montreal of a hundred years ago. Twelve years before he had gone there first, and had carved his name on the wooden stairway leading to the top of the mountain. Isobel had been there then. Perhaps it was she he had heard singing behind one of the walls.

He put the paper with the letters, making a note of the uncle's name. If anything happened it would be his duty to send word to him—perhaps. And then, deliberately, he tore into little pieces the slip of paper on which he had written the name. Henri Lecours had cast off his niece. And if she died why should he—Billy MacVeigh—tell him anything about little Isobel? Since Isobel's terrible castigation of himself and the law, duty had begun to hold a different meaning for him.

Several times during the next hour Billy listened at the door. Then he made some tea and toast and took the broth from the stove. He went into the room, leaving these on the hearth by the stove, so that they would not grow cold. He heard Isobel move, and as he went to her side she gave a little breathless cry.

"David—David—is it you?" she moaned. "Oh, David, I'm so glad you have come!"

Billy stood over her. In the darkness his face was ashen gray, for like a flash of fire in the lightless room the truth rushed upon him. Shock and fever had done their work. And in her delirium Isobel believed that he was Deane, her husband. In the gloom he saw that she was reaching up her arms to him.

"David!" she whispered, and in her voice there were a love and gladness that thrilled and terrified him to the quick of his soul.

In the silence that followed Isobel's whispered words, there came to Billy a realization of the crisis which he faced. The thought of surrendering himself to his first impulse, and of taking Deane's place in these hours of Isobel's fever, filled him instantly with a revulsion that sent him back a step from the bed, his hands clenched until his nails hurt his calloused palms.

"No, no I am not David," he began, but the words died in his throat.

To tell her that, to make her know the truth—that her husband was dead—might kill her now. Hope, belief that he was alive and with her, would help to make her live. So quickly that he could not have spoken his thoughts in words, these things flashed upon him. If Deane were alive and at her side his presence would save her. And if she believed that he was Deane, he would save her. In the end she would never know.

HE REMEMBERED how Pelletier had forgotten things that had happened in his delirium. To Isobel, when she awakened into sanity, it would only seem like a dream. A few words from him then would convince her of that. If necessary he would tell her that she had talked much about David in her fever, and had imagined him with her. She would have no suspicion that he had played that part.

Isobel had waited a moment, but now she whispered again, as if a little frightened at his silence.

"David—David—"

He stepped back quickly to the bed, and his hands met those reaching up to him. They were hot and dry, and Isobel's fingers tightened about his own almost fiercely and drew his hands down to her breast. She gave a sigh, as tho she would rest easier, now that his hands were touching her.

"I have been making some broth for you," he said, scarcely daring to speak. "Will you take some of it, Isobel? You must—and sleep."

He felt the pressure of Isobel's hands, and she spoke to him so calmly that, for a breath, he thought that she must surely be herself again.

"I don't like the dark, David. I can't see you. And I want to do up my hair. Will you bring in a light?"

"Not until you are better," he whispered. "A light will hurt your eyes. I will stay with you—near you—"

She raised a hand in the darkness, and it stroked his face. In that touch were all the love and gentleness that had lived for the man who was dead, and the caress thrilled Billy until it seemed as tho what was in his heart must burst forth in a sobbing breath. Suddenly her hand left his face, and he heard her moving restlessly.

"My hair—David—"

He put out a hand and it fell in the soft smother of her hair. It was tangled about her face and neck, and he lifted her gently while he drew out the thick masses of it. He did not dare to speak while he smoothed out the rich tresses and plaited them into a braid, Isobel sighed restfully when he had done.

(To be continued next week)

Activities of Al Acres: *How Do You Like the Decorations, Paw?* : : : : *By Leet*

EVERY SOUVENIR HUNTER IN THE STATE HAS BEEN OUT HERE TRYING TO PINCH ONE OF MY INDIAN SKULLS, I'LL JUST PUT 'EM IN THE HOUSE FOR THE NIGHT!
I CAN'T GET MUCH HELP FROM THE BOYS SINCE THEY FOUND THAT INDIAN MOUND
PAW, COME IN AND SEE HOW NICE MY LIVING ROOM LOOKS SINCE I CLEANED IT!

News and Notes

THRU many long, damp years three white pine logs lay buried in the bed of an old splash dam in central Pennsylvania. In the spring of 1924 a big flood uncovered them. They were taken to a mill and from them was sawed lumber worth $240 at current prices.

* * *

In 1803 one George Smith, Sr., bought 1000 acres of white pine timber in Indiana County. Possibly the logs that were buried under the dam grew on that tract. The three logs are now worth $240, but 123 years ago Smith bought this 1000-acre tract of the same kind of timber for $83 plus a small amount for taxes.

* * *

At the time of the Civil War there were many people in Europe who were so rusty on their geography that they thought the states which seceded from the Union were in South America, and that the northern Yankees had spread themselves out over all of the North American continent.

* * *

American railroads pay taxes amounting to about $700 a minute or a million dollars a day, 365 days in the year. And railroad taxes are going up.

* * *

The Imperial government of Japan has given us a birthday present. The gift, consisting of 1600 fruit and ornamental trees, was presented to the city of Philadelphia in honor of the Sesqui-Centennial. The trees have been set out in Fairmount Park, where the Centennial Exposition was held fifty years ago.

* * *

Russia produces sunflower seed by the millions of tons. Oil is extracted from the seed and used in cooking, and for making paints, varnishes and soap. The seed is also used in large quantities for food for both humans and livestock.

Did you ever hear this one?—

"Is this a speedometer?" she asked as she tapped on the glass which covered that instrument.

"Yes, dear," I replied in a sweet, gentle voice.

"Don't they call this the dash light?" she inquired, fingering the little nickel-plated illuminator.

"Yes, honey," my words floated out softly as before.

"And this is the cut-out?" she queried.

"Yes, toodles," as I took my foot off the accelerator. Not more than two hundred feet away our course was blocked by a fast moving freight train.

"But what on earth is this funny looking pedal?" she said in a curious tone as she gave the accelerator a vigorous push with her dainty foot.

"This, sweetheart, is heaven," I said in a soft, celestial voice as I picked up a golden harp and flew away.

A western farmer was astonished to receive the following letter from his son in college:

"Dear Father:—I am in a deuce of hole. Kindly send me $100 and oblige.

"Your loving son, Pat."

"P. S.—After writing this letter I was so stricken with remorse that I ran after the postman and tried to get it back. I can only pray that it will not reach you."

But who could be more astonished than the son to receive this reply:

"Dear Son: Your prayers are answered. The letter did not reach me.
Dad."

The old hen gathered her brood together and bade the twelve pullets guard their only brother while she went out for the afternoon.

On her return all the pullets were weeping bitterly and cried, "Oh, mother dear, our brother is dead."

"Dead! How did it happen?"

"The minister came to tea. The farmer's wife caught our brother, plucked him, cooked him and the minister has eaten him!"

"How sad! But we must look at the bright side of things. Anyhow, we can be thankful your brother has entered the ministry, for he would never have been any use as a layman."

A patient called on a physician and said:

"Doctor, I can't get to sleep of nights."

"Insomnia, eh?" the doctor queried.

"That's it," asserted the patient.

"There are ways and means of combating that," declared the medico. "You think you are hopelessly wakeful, but mental effort has a great deal to do with getting you to sleep. Just imagine you are walking a tight rope a thousand feet from the ground. Step by step you advance on this tight rope."

"Yes?" the patient inquired.

"You'll soon drop off."

A man in a hospital for mental cases sat fishing over a flower bed.

A visitor approached and, wishing to be affable, remarked:

"How many have you caught?"

"You're the ninth," was the reply.

Doctor No. 1—Did you hold the mirror to her face to see if she was still breathing?

Doctor No. 2—Yes, and she opened one eye, gasped, and reached for her powder puff.

Butter—Firm; receipts, 6843 tubs; creamery, higher than extras, 41½@42¼c; creamery, extras, 92 score, 41@41¼c; creamery, firsts, 88@91 score, 38@40¾c; packing stock, current make, No 2, 27c.

Eggs—Firm, receipts, 16,639 cases. Fresh gathered, extra firsts, 32@33c; do, storage packed, 33¾@34½c; fresh gathered, firsts, 30½@31½c; do, storage packed, 32@33c; fresh gathered, seconds, 28½@29½c; do, storage packed, 30@31½c; nearby hennery whites, closely selected extras, 39@40c; nearby and nearby western hennery whites, firsts to average extras, 32½@37c; nearby pullets, 30@31c; nearby hennery browns, extras, 37@39c; Pacific Coast whites, extras, 39@40c; do, extra firsts, 37@38c.

Cheese—Steady; receipts, 244,923 lbs. State, whole milk, flats, fresh, fancy to fancy special, 21¼c; do, average run, unquoted; state, whole milk, flats, held, fancy to fancy special, 26½@28c; do, average run, 26c.

Live Poultry—Nominal; no freight quotations; broilers, by express, 25@45c; fowls, by express, 28@32c.

Dressed Poultry—Quiet; chickens, fresh 40@50c; do, frozen, 30@44c; fowls, fresh, 30@36c; do, frozen, 29@36c; old roosters, 18@23c; turkeys, fresh, 30@40c; do, frozen, 42@62c.

LIVESTOCK

Cattle—Irregular; steers, $7@9.90; state bulls, $4@6.25; cows, $2.50@5.50.

Calves—Weak; veals, common to prime, $6@15; culls and little calves, $6@7.50; grassers and fed calves, $5@7.

Sheep and Lambs—Steady; sheep, $3@8; culls, $2@3; lambs, Ohio, medium to prime, $11.50@16; state, common to prime, $10@16; culls, $7@10; springers, 65@75 lbs, $19 per 100 lbs.

Hogs—Steady; light to medium weights $14.25@14.75; pigs, $15@15.25; heavy hogs, $13.75@14.25; roughs, $12@12.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment: City bran, $31.50; middlings, $30, in 100-lb sacks; red dog, $38, nominal, in 100-lb sacks; western spring bran, prompt shipment, $30; standard middlings, prompt shipment, $28.75; flour middlings, prompt shipment, $35; red dog, prompt shipment, $36, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.10, in 100-lb sacks; cottonseed meal, 36 per cent protein, $38.75; prompt shipment linseed oil meal, $51.30 in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $30; No 2, $28@29; No 3, $26@27; sample, $10@20. Straw, large bales, rye, $21.

Grain—WHEAT, No 2 red, c i f, dom, $1.77¼; No 1 dark spring, c i f, domestic, $1.81¼; No 2 hard winter, f o b, export, $1.75¼; No 1 North Manitoba, in bond, f o b, export, $1.70⅞; No 2 mixed durum, f o b, export, $1.56¼. CORN, No 2 yellow, 86¼c; No 3 yellow, 84c. OATS, No 2 white, 50¾c; No 3 white, 49¾c; No 4 white, 48¼c; ordinary white, clipped, 50@52c; fancy white, clipped, 53½@55c. RYE, c i f, export, $1.01½. BARLEY, malting, c i f, domestic, 84½@87½c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: Weighty steers after losing part of early advance still 15@25c higher; yearlings steady to 25c lower; only choice long yearlings holding steady; light yearling heifers sharing maximum decline; fat cows and heavy heifers, 15@25c higher; canners and cutters, 10@15c lower; bulls, steady; vealers, 50@75c higher; stockers and feeders scarce; strong to 15c up. Extreme top heavy steers, $10.65; yearlings, $10.25; part load, $10.35. Week's bulk prices follow: Fed steers, $8.85@10; fat cows, $5.50@7.35; heifers, $7.50@9.40; canners and cutters, $4.25@4.75; veal calves, $12@13.25; stockers and feeders, $7.50@8.75.

Hogs—210@300-lb butchers largely $13.90@14.20; bulk desirable 210 lbs down $14.30@14.60; practical top, $14.60; majority packing sows, $12.65@12.90; few sorted killing pigs, $14.50@14.75; stags, $12.25 down; shippers took 1000 head; estimated hold over, 3000 head; part held off market; heavyweight hogs, $13.55@14.25; medium, $14@14.55; lights, $13.70@14.65; light lights, $13.75@14.65; packing sows, $12.50@13; slaughter pigs, $14@14.75.

Sheep—Compared with week ago: Desirable fat lambs around 25c higher; better grade yearlings sharing advance; in-between lambs and yearlings mostly 25@50c lower; fat sheep, 50c@$1 lower. Week's top prices: Fat lambs, $18.90; yearlings, $16.90; feeding lambs, $14. Bulk prices follow: Fat lambs, $17.50@18.75; culls, $13@14; feeding lambs, $13.25@13.85; fat ewes, $5.50@7.

WOOL MARKET

Boston, June 5, 1926.

Domestic: Ohio and Penna fleeces—Delaine unwashed, 44c; ½-blood combing, 43c; ⅜-blood combing, 42@43c; fine unwashed, 38@40c. Mich and N Y fleeces—Delaine unwashed, 43c; ½-blood combing, 42c; ⅜-blood combing, 42@43c; ¼-blood combing, 41@42c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@42c; ⅜-blood, 40@41c; ¼-blood, 39@40c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 5, 1926.

Cloverseed, cash, domestic, $22; imported, $17.50 asked; October, $19.50; December, $16.50. Alsike, cash, $17. Timothyseed, cash, $3.45; September, $3.70.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 7th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$29.50@30.50
Spring bran	29.00@30.00
Soft winter wheat bran......	31.50@32.00
Hard winter wheat bran	30.50
Standard middlings	29.50
Soft winter wheat middlings	31.20@33.50
Flour middlings	33.50
Red dog flour	37.50
White hominy	30.50
Yellow hominy	30.50@31.00
Gluten feed	39.35
36 per cent cottonseed meal..	37.25
41 per cent cottonseed meal..	39.25@39.50
43 per cent cottonseed meal..	41.25@41.50
34 per cent linseed meal.....	49.75@50.70

Millfeed easy under light demand with production ample for all requirements.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE Philadelphia strawberry market was stronger June 5 with a better demand for the best stock. Receipts from New Jersey were more plentiful, totaling about 400 crates, while motor truck receipts from the Eastern Shore amounted to approximately 5000 crates. Trading was fairly active with New Jersey stock ranging from $4 to $6 per 32-quart crate, according to the Pennsylvania and Federal Bureau of Markets.

Nearby asparagus was in moderate receipt and offerings were cleaning up well. The demand was good with Pennsylvania green stock topping the market. The best ranged from $5 to $6 per dozen bunches with a few lots as high as $6.50. The fancy white grass sold at $2.40@3.

Rhubarb held steady, while nearby lettuce continued plentiful and dull. Spinach was slightly stronger with the market firm on the best stock. There was considerable ordinary stock which sold very slowly. Most sales ranged from 40c to 50c per bushel.

New potatoes moved very slowly altho offerings were of better quality than yesterday. South Carolina Cobblers brought $6 to $6.50 per barrel. The old potato market continued very slow and draggy, but there were a few sales of Maine Green Mountains at $4.50 to $4.75 per 120-pound sack.—W. R. W.

Butter Markets

THE butter markets for the week ending June 5, opened in an easy position with price declines effective on all markets, but this condition was only temporary and soon gave way to firmer markets. Operations on the part of buyers were of a rather cautious nature and altho there were no marked signs of weakness, neither were there any decided signs of strength.

Sentiment was mixed but as the week progressed confidence in the market at present price levels appeared to be developing. Jobbers were inclined to buy a little more freely and receivers were willing to carry larger stocks.

Blair County, Pa.—Grain and grass growing nicely. It has been very dry but we have had some showers lately. The corn is planted and some of it is coming up at present. We have fine prospects for a fruit crop. Some of the farmers are plowing fallows at present. There is still much sickness, chiefly influenza and kindred disorders. Wheat is now selling for $1.60; butter, 40c; milk, 10@12c qt.; eggs, 25c. Forest fires have done more than the usual damage this spring. Pomona Grange met in Williamsburg on May 27, they were the guests of Clover Creek Grange.—H. E. H., May 29.

Bradford County, Pa.—The season is unusually dry. Oats are at a standstill. Seeding is coming on very slowly. Some corn is planted but very little is up. Farmers who plowed in the spring for corn will not plant until we get rain. Fall plowed beds contain some moisture. Pastures are not growing. Ensilage and hay are very scarce and stockmen do not know which way to turn. Water supplies are getting lower. Nights have been cold; have had frosts until a few days ago. Very little buckwheat ground is plowed. Poultry culling has been started. Young chicks are doing nicely. The outlook for fruit is good where care is taken about spraying, etc. Bees wintered well. Some of last year's honey still on hand and selling at 12½@15c per lb. in 10-lb. pails.—G. E. E., May 29.

Cambria County, Pa.—Meadow grass yellow and stunted from dry weather and repeated freezings. Fruit, generally, appears only slightly injured. Grapes badly frozen. Corn all planted, but very little up yet. Oats making slow growth. Not many sales this spring. Farm help plentiful but not much employed at wages asked. Potato acreage less than last year. Good demand for high-class dairy cows. Pigs very scarce and prices out of sight. Pasture almost as short as in midsummer and cows still relish a winter ration of silage. Dealers report heavy sales of tractors and improved farm machinery. Most of the wool in the county will be pooled. Local prices for produce: eggs, 35c; butter, 50c; oats, 65c; live chickens, 30c; veal calves, 18@20c; calf skins, 50c; seed potatoes, $3.50. Markets dull as mines are working short time.—S., May 29.

Clearfield County, Pa.—Following continued dry and cold weather we now have light showers; vegetation is responding yet one cannot be assured of a good hay crop. Early planted corn is coming up slowly. Potato planting is in progress; as seed is scarce some are curtailing their acreage. We have a good set of fruit, cherries and plums particularly. Baldwins, Rome Beauty, MacIntosh and Wagner promise well but Bens are not full here. Eggs, 25@35c; butter, 45@60c; mixed hay slow, $22; oats, 70c.—D. H. W., June 1.

Fulton County, Pa.—Weather has been cool and very dry the past month. All crops are far below normal. Wheat is coming in head very short and grass fields have made very little start. Farmers are replanting corn; it came up well but is making very little progress and cutworms, which are worse than for many years, are doing much damage both in gardens and corn fields. Prospects are good for all kinds of fruit. Several very destructive forest fires this spring. About the usual potato crop is being planted; early potatoes are coming up. Baby chicks are doing fairly well. Market quotations: hay, $35; wheat, $1.50; chickens, 26c; eggs, 25c; bacon, 22c; lard, 17c; butter, 30c.—T. H. T., May 27.

Lebanon County, Pa.—May was very cool most of the time; several heavy frosts. The corn is about all planted and some has been cultivated. From all appearances a good stand is assured. The grass for hay is short, except alfalfa, which has made better progress. The condition of the wheat fields has greatly improved since the early spring and much is heading at this writing. Much hay has been baled and is being shipped out of the county. The heaviest rain of the season fell this afternoon. Prospects good for all kinds of fruit. Prices: wheat, $1.60; corn, 70c; butter, 50c; eggs, 27c.—P. L. M., June 1.

Montgomery County, Pa.—Very little rain during May, which allowed the farmers to get about two weeks ahead with their work. The drought was very hard on the grass which looks like a half crop. Corn is nearly all planted but cool weather and a hard crust on the ground will make some poor stands. The wheat that stood the winter looks excellent. Many soy beans being planted as an emergency hay crop. The fruit outlook is very good. Early potatoes are also doing well. Prices: wheat, $1.60; oats, 70c; corn, 90c; eggs, 35c; butter, 55c; chickens, 30c; calves, 13c.—C. N. D., June 1.

Sullivan County, Pa.—The long dry spell has been broken by frequent and much-needed rains. The weather is ideal for crop growth. Oats is up nicely and growing fast. A few farmers have not sown as yet. Corn is just coming up. The wheat fields give indications of a fine crop. The fruit crop promises to be fair. The summer resort of Eagles Mere opened the first of June. The state road work is progressing nicely. Recently we have had a very destructive fire in North Mountain, burning huge timber tracts. Prices vary but slightly. Oat, 60c; buckwheat, $1; corn, $1.20; wheat, $1.60; potatoes, $2.50; butter, 45c; eggs, 30c.—M. G., June 3.

Susquehanna County, Pa.—We have had cold weather all thru May and only one good shower, so pastures haven't grown enough to satisfy cattle. On high ground the pastures are turning brown. Many farmers are still feeding hay and grain to new milkers. Oats are all sown, many potatoes planted, and some corn. We have light frosts nearly every night and there is danger of its killing fruit blossoms as they are well started. Prospects are very good for hay but rain is needed badly. Pigs are very scarce and selling for $7 when five weeks old. The T. B. test brought the prices of cows very high. The price of milk about the same as last year. Cows, $150; potatoes, $3; eggs, 30c; butter, 49c; veal calves, 11c.—J. A. G., May 29.

Tioga County, N. Y.—A cold, dry, backward spring. Frosts were every night in the vicinity of Candor all last week and ice formed on still water. Potatoes soared in price, many selling at 90c to $1 a peck at store, and seed potatoes were sold at $4 bushel. Last week a groceryman at Flemingville was paying $1.50 a bushel and one at Newark Valley $2. At Nichols they were endeavoring to load a car at $1 a bushel, but did not succeed very well.—C. A. A. B., May 29.

Egyptian Onions

ALTHO Egypt has exported onions for many years the magnitude of the present trade is of only recent development, being the result of larger distribution following the establishment of a number of new steamship connections between Egypt and foreign ports. In former years Egyptian onions were shipped largely to the United Kingdom and some other European markets, especially Austria. The United States in pre-war years took no Egyptian onions direct, but in recent years has been one of Egypt's most important customers.

Before the war direct sailing from Alexandria to New York was rare but today at least one twenty-day steamer sails for New York every six days. Last year Egypt shipped 706,000 bushels, or about 1400 cars, to the United States. The first Egyptian onions of the 1926 season arrived on the Boston market during the latter part of March.

The tariff on onions imported into the United States is about one cent per pound and growers in Texas have been trying to have this advanced since their crop comes into direct competition with the Egyptian imports.—W. R. Whitacre.

War on Codling Moth

EXTENSIVE studies of the life history and control measures for the codling moth are being conducted in Kent County, Delaware, this spring by Dr. H. L. Dozier, entomologist of the Delaware Agricultural Experiment Station, and County Agent Russell E. Wilson. It has been estimated that 75 per cent of the cull apples produced in Kent County each season are infested with the codling moth.

Heretofore, County Agent Wilson has placed small wire cages in a few of the representative commercial orchards in Kent County for the purpose of studying the time of the maximum emergence of the first brood of the moth. When this emergence was observed in these wire cages, notices were mailed to all the fruit growers advising them of the proper time to apply the arsenical sprays.

In addition to these small cages, this year Doctor Dozier and Mr. Wilson secured the cooperation of four commercial fruit growers to construct large screened cages twelve feet square around a bearing apple tree. The object is to study the complete life history of each of the other two broods with a view to advising the growers concerning the emergence of the second and third generation of adult moths.

Cages Have Been Infested

These large screened cages have been built in the orchards of J. Leonard Soper near Magnolia; S. H. Derby near Woodside; F. C. Bancroft near Camden, and S. H. Baker west of Magnolia. All of these cages have been infested by placing in them several baskets which are heavily infested with the codling moth larvae, from which the adult moths will emerge and attack the apples. Three different late varieties of trees are being used for these observations, the Stayman, the Paragon, and the Nero.—W.

Why Barns Burn

(Continued from page 3)

danger line. At this stage a thermometer should be quickly brought into use.

Increasing costs of labor on Pennsylvania farms have necessitated the speeding up of the various farm operations. Hay may be cut, raked and stored much more rapidly than 30 years ago, but it is doubtful whether the curing process has speeded up proportionately over this same period. Artificial drying, practiced to some extent in Europe, is hardly a practical process under present Pennsylvania conditions.

Modern haymaking machinery has a tendency to mat the hay and the use of the hay fork is the culmination of these compacting operations. A compacted cone of hay is formed where the hay fork drops its load. Large forkfuls of hay are difficult to tear apart and are in many cases left intact.

To Cure Properly

To secure proper curing in the mow it is necessary that forkfuls of hay be torn apart thoroly and spread uniformly. This will not entirely prevent the cone of compacted hay due to the dropping of so great a weight from the fork, but it will permit the circulation of more air thru the hay. If the hay fork is not used until the hay in the mow is level with the breast beam, the spreading process will be much easier. This method also provides a cushion to receive the shock of the dropping hay.

Moisture and a compacted mass of hay are the conditions necessary for self-ignition. Improper curing methods are responsible for a large moisture content in the hay. A hole in the roof may admit enough rain to start the process of spontaneous combustion. Warm, humid air rising from the stables condenses upon reaching the cooler air of the mow. This moisture is formed either on the hay or on the underside of the roof where it can easily drop upon the hay.

If the barn has a tight roof, if the hay is well cured, and if it is not allowed to lie in the mow in hard compacted masses as it dropped from the fork, there will be little danger of a fire caused by spontaneous combustion.

Prices and Prospects

THE strawberry season is working northward and berries from New Jersey have been appearing on the Philadelphia market. The quality of the stock has been generally good and has commanded top prices.

The feature of the strawberry season has been the increased use of the motor truck in bringing berries to market from sections that formerly shipped by rail. The Eastern Shore district of Virginia, Maryland and Delaware hauled approximately 61,875 crates of strawberries to Philadelphia during May, or the equivalent of about 260 carloads. There were 22 cars received by rail and in addition to these about 6090 crates arrived by express in less than carload lots.

Motor Trucks Being Used

These sections also used the motor truck to supply the markets of New York, Trenton, Wilmington, Chester and Baltimore. Berries have arrived in better condition when this method of transportation is used. On the Philadelphia market they have brought a premium ranging from 75c to $2 per crate above rail receipts. Less handling is required and the berries present a brighter appearance. Large commercial trucks hauling about 150 crates are used and this method of transportation has cost about the same as both express and freight.

Hay prices held steady in the eastern markets during the last week of May and receipts were liberal. The demand was active for top grades but all sound hay moved readily in the East, on account of the scarcity of best hay. Timothy averaged firm and light offerings forced prices of No. 2 timothy higher at Boston.

Prices declined slightly at New York where the bulk of the arrivals consisted of lower grades. Buyers at Pittsburgh were purchasing for immediate needs only and the market was generally dull.

Grain receipts were more than ample for current needs and the cash grain prices were generally lower. World wheat quotations held firm but receipts in domestic markets were heavy and the market weaker. Corn prices worked lower due to increased receipts. Plantings were well along in the eastern part of the Corn Belt. Oats prices worked lower under a limited demand. Rye held firm under reports of poor crop conditions and some export inquiry.

Supplies of eggs on the New York market were relatively heavy during the week ending June 2, but there has been some seasonal decrease. Nearby white eggs were plentiful and there has been a good demand for the best stock for the holiday trade. The movement into storage has been free and the May 1 shortage has been reduced.

The Philadelphia egg market held generally steady altho extra firsts declined one-half cent at the close. Receipts were heavy, totaling 54,397 cases, of which Pennsylvania supplied 3194.—W. R. Whitacre.

Feeding Young Pigs

Will you please send me information about the feeding of four small pigs eight weeks old?—L. B., Greene County, Pa.

The pigs that are from 8 to 10 weeks old are ready to be weaned. Before weaning, however, it is highly essential that they be taught to eat some grain. Unless this is done the sudden weaning will result in a set back and it will take some time to get them back to a normal condition. No doubt these pigs have become accustomed to eating some grain.

A very satisfactory grain combination consists of 4 parts of corn meal, 3 parts of wheat middlings and 1 part of digester tankage or fish meal. Mix this combination and let the pigs have free access to it in a self-feeder or it may be hand fed. If a supply of skimmilk or buttermilk is available it may be used in place of the tankage or fish meal. Feed it at the rate of three pounds for each pound of the grain allowed. If the pigs are on a self-feeder let them have all the milk they will consume.

Set Aside Pasture if Possible

If a small piece of a clover or alfalfa field can be set aside it will pay to do so. A small field seeded to Dwarf Essex rape will provide an abundance of pasture in about six weeks after it is seeded.

Continue feeding the grain combination suggested until the pigs weigh about 100 pounds, after which the middlings can be gradually eliminated and the amount of corn increased so that when they weigh about 125 pounds they will be getting a combination of 10 parts corn and 1 part tankage or fish meal or the corn and milk.

A very simple and satisfactory mineral mixture is made up of twenty per cent salt, forty per cent steam bone meal and forty per cent of ground limestone. The mineral mixture will be very useful in developing the pigs, especially if there is no pasture. The mineral mixture should be put in a box where the pigs can have free access to it.—W. H. Tomhave.

Sell the Lambs Early

I have about 25 lambs that I expect to sell as market lambs. Will it pay me to feed these lambs grain on pasture and get them ready for market this summer or should I carry them along on pasture alone this summer and fatten them in the fall? The lambs are about two months old.—R. U. S., Perry County, Pa.

It will be a good plan to finish these lambs during the summer and put them on the market as soon as possible. The lambs should be fed grain while on pasture as they can be put on the market at an earlier age than when no grain is fed. It is an advantage to get lambs ready for market during the summer as they can be disposed of before the heavy run of western lambs begins. The price received for the early lambs is usually higher than that paid during the fall months. This higher price received will more than pay for the grain which the lambs will consume.

It is quite essential that the lambs are put on good clean pasture where the old sheep have not been pastured. This will reduce the trouble from internal parasites. A good field of clover or alfalfa pasture can be used to advantage. If a field has been seeded to rape and is available it will make an excellent pasture.

Since the lambs are not old enough to wean, they must be pastured with the ewes. They should be kept with the ewes until they are ready to go to market. A lamb creep must be built to keep the ewes from eating the grain.

The grain fed the lambs should consist of a mixture of 5 parts corn and 1 part linseed oil meal. This can best be fed as cracked corn, but shelled corn can be used if it is not convenient to have it cracked. The grain should be put in the trough daily as lambs do not relish grain that has been in the trough any length of time.

The lambs can be marketed to best advantage when they weigh from 70 to 80 pounds.—W. H. Tomhave.

When to Breed Sow

I have a good brood sow that farrowed a litter of pigs about the middle of March. When would it be desirable to breed the sow for fall farrowing? What time would you breed her?—O. W. R., York County, Pa.

It is desirable to have fall litters farrowed early in September in order to give the pigs a good start before cold weather sets in. The gestation period of swine is about 112 days or 16 weeks.

The brood sow should be bred as soon as possible after the spring pigs have been weaned in order that the pigs may not come too late in the fall.

The average brood sow can be bred to produce two litters per year to advantage. Producing two litters materially reduces the cost of the pigs at weaning time because the cost of maintaining the brood sow must be charged to the pigs at weaning age.—W. H. Tomhave.

Why Do Hogs Root?

IS IT not true, as a general thing, that hogs would not root if they received all the elements of food that they crave? or, in other words, they are rooting for something in which the food they receive is deficient?

I must venture to disagree with a statement of your veterinarian in a recent issue, in which he states that coal is not good for hogs. Probably he is thinking of some kinds of coal, but I have fed bituminous coal for many years as a tonic or "condiment," and have never observed either in my own experience or that of others any but beneficial results. I do not mean to mix the coal with the feed, altho I do not think that would be harmful, but throw some lumps of fine coal into the pen or feed lot where the hogs show a liking for it like a kid for candy.

In 1919, I had a sow that started to eat her pigs. I threw a few lumps of coal into the pen, and she "went for it" as if she was about starved for it, and never hurt another pig.—W. A. L., Mercer County, Pa.

We ask readers to answer W. A. L.'s question. Do hogs root for the exercise, for minerals they crave, for worms and grubs, or only because they were made that way?—Editors.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Fertilizer Fillers

A FERTILIZER dealer has raised an interesting question concerning the possibility of leaving out fillers from some fertilizer mixtures.

> "In making up medium and low grade fertilizers it is impossible for me to make 2000 lbs. to ton without using a filler to bring the weight up to a full ton. It is impossible for me to use sand as most firms do, as my place is open at all times and if the farmer sees the sand he thinks he is being cheated. Is there any way that I could put it up short weight and mark it on the bag and explain to the farmer about it?
>
> "Would it be legal to put say 180 lbs. to bag and mark it equal to 200 lbs. of whatever analysis it was?
>
> "I do not want to use low grade ammoniates as they are not nearly as available as high grade tankage. Please let me know if there is any way to overcome this situation. The farmers all understand it and are perfectly willing to take it this way and say they do not want the trouble of handling the extra filler. I understand that some firms are selling it short weight."

The question which you raise in your letter is not a new one. Some of the fertilizer manufacturers and dealers have met a similar problem by indicating that a ton of any given concentrated fertilizer is equivalent to a larger quantity of a product with a lower analysis.

For instance, a mixture made up of 200 pounds nitrate of soda, 300 pounds sulphate of ammonia, 1100 pounds 18 per cent acid phosphate and 400 pounds muriate of potash would have an analysis corresponding to 5-16-10. Sixteen hundred pounds of this mixture would be equivalent to one ton of a 4-8-8.

Some of the fertilizer dealers sell so-called open formula fertilizers, the ingredients of which are mentioned and the equivalents in terms of lower analysis fertilizers are given.—J. G. Lipman.

More Corn and Better

THE right kind of fertilizer does more than increase the yield of the cornfield. It also helps the crop to mature earlier, thus, in case of early frost, increasing the percentage of marketable corn. Some experiments conducted in Iowa will show what we mean.

Here are the yields of corn on three plots, one of which received neither lime, manure, nor fertilizer:

Untreated plot	34.9 bushels
Manure and lime plot	51.7 "
Manure, lime and acid phosphate plot	63.3 "

But that is only half the story. The unfertilized plots not only produced less corn, but what they produced was also poorer. Here are the percentages of marketable corn on the same three plots:

Untreated plot	31.4% marketable
Manure and lime plot	82.7% "
Manure, lime and acid phosphate plot	98.8% "

Very similar results have been obtained in the same kind of experiments in other states.

FOXES

QUALITY DARK BLUE FOXES—That produce large litters and wonderful pelts. Buy direct from one of the world's largest Blue Fox Farms. Low prices. Breeder Agents wanted. Write for Free Booklet, price list and credit plan giving the purchaser one year to pay after delivery. Member Chamber of Commerce. Bank references. Grover Cleary Fox Farms, Smith Building, Seattle.

FARM LANDS

ILLINOIS THE LAND OF OPPORTUNITY—Henderson County is one of the best located counties in the State of Illinois. The Santa Fe and C. B. & Q. Railroads, which connect Chicago with the Pacific Coast, both pass through Henderson County. The Illinois Power & Light can furnish unlimited power for industry. You can buy five acres of Henderson County's rich soil for the price of a town lot. We are bounded on the west by the Mississippi River, and our soil is ideal for growing anything. Whether you wish to farm, be a merchant, or start industry, Henderson County is the place. E. G. Lewis, Media, Ill.

BUY A GOOD FARM in the ideal location of the East. Federalsburg is the center desired location of the famous Eastern Shore of Maryland, where you can enjoy the most desirable climate and best farm land values obtainable. Consult the Del-Mar-Va Association or myself for information concerning poultry, gardening, fruit, dairy, grain and stock farms, also beautiful waterfront properties, for sale very cheap, from 1 to 800 acres, including large valuable timber acreage and gunning clubs. Write for my catalog. C. E. Turner, Federalsburg, Maryland.

GOATS

VITALITY MILK GOATS—Saanens, Nubians, $25. Bred, $30. Freshening, $40. Fresh, $45, $55. Purebreds, $60, $75. Goldsboro Goatery, Mohnton, Pa.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

MASTITIS.—One of my cow's teats went bad all of a sudden. One night the milk looked pinkish so I threw it away. Next morning one front teat was in a curdle so I dissolved the bag with hot water. We are afraid to use the milk. I would also like to know what makes warts on a cow's teat.—J. B. M., Newfield, N. J. This is evidently mastitis or inflammation due to an infection. Better consult your veterinarian about this case. In the meantime, would advise you to separate this cow from the herd, wash the udder before and after milking with antiseptic solution, and also wash the hand in antiseptic solution. Do not use the milk from the affected quarters until the cow recovers. Warts may come and go, causing much, little or no inconvenience. One should avoid use of strong drugs for removal. Let your veterinarian advise you regarding this case also.

A PROBLEM INVOLVING ABORTION.—I have a valuable cow that aborted about six weeks before her time. She cleaned all right and is giving a normal supply of milk. I have no sire and nobody will let me breed her to their sire, being afraid of contagious abortion. She has been in heat several times and I thought maybe you could give me some advice on the matter. I isolated cow from herd and thoroly sprayed stable with disinfectant. She carried her calf last spring the full time.—A. E., McConnellsburg, Pa. This is very probably a case of contagious abortion. You followed the best plan for control, namely isolation and disinfection. The fact that bull owners refuse to allow service on this cow is a problem which can be worked out only by the parties concerned. It would be a chance for spreading infection. The herd owners of the community would do well to have the agglutination or blood test made on their animals to determine the presence of infection.

WARTS ON TEATS.—Have a young cow whose teats are covered with warts. They get sore and cause her to kick when being milked. Kindly advise a remedy.—M. S. P., Chester, Pa. Warts are sometimes difficult to remove. Covering the skin around the wart with vaseline and applying a silver nitrate pencil to the moistened surface of the wart is a satisfactory method. Care should be exercised as the application will cause death of good tissue as well as the wart tissue.

Training Club Leaders

ONE of the new features introduced into boys' and girls' club work this year by State Club Leader Allen L. Baker is a Leadership Training School, the object of which is to train young people to become leaders in club and community work.

The first Leadership Training School will be held in State College, June 14 to 16th. Boys and girls from thirty counties will attend. After their intensive course of training they will help manage the activities of Young Farmers' Week which open on June 16th.

Doctor—I suppose, Mrs. Jackson, that you have given the medicine according to directions.

Mrs. Jackson—Well, doctah, I done mah bes'. You said give Rastus one o' dose pills three times a day until gone, but I done run out o' pills yistddy an' he hain't gone yet.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

MILLIONS hardy field grown cabbage and tomato plants, dozen varieties, 500—$1.00; 1000—$1.50; prepaid. 10,000 expressed, $10.00. Cauliflower 55c per 100; $3.50 per 1000. Prepaid. Well packed. Satisfaction guaranteed. Price list late plants free. J. T. Councill & Sons, Franklin, Va.

10 MILLION Cabbage, Tomato and Collard Plants. 12 early and late varieties. $1.00 thousand; 5000, $4.50; 10,000, $7.50. Cauliflower and Sweet Potato $3.00; 10,000, $25.00. Pepper, $2.50; 10,000, $20.00. Prompt shipments, delivered safely anywhere. Farmers Supply Co., Franklin, Va.

FROSTPROOF CABBAGE PLANTS—Copenhagen, Wakefield, Succession, Danish, Flat Dutch and Drum Head. Five varieties, Tomatoes, N. C. Short Stem and Cabbage Collard. 200-60c; 500-$1.25; 1,000-$2.00, postpaid. Expressed, $1.25 per thousand. Virginia Plant Farm, Courtland, Va.

VEGETABLE PLANTS—50 acres ready. Fine field grown stocks. Special wholesale prices: Cabbage, tomato and collard $1.00 thousand. Pepper $2.00. Cauliflower and Sweet Potato $2.50. Prompt shipments, well packed to carry anywhere. Old Dominion Plant Company, Franklin, Virginia.

SWEET POTATO PLANTS—Pure Nancy Hall, Southern Queen, PortoRico. Grown from nice hand-picked, chemically-treated seed, free from disease. Postpaid, 500 for $2; 1000 for $3.50. Expressed, $3.25 per 1000. Jesse Russell, Route 2, Bowling Green, Ky.

ONIONS, beets, lettuce, $1.00 per 1000; cabbage, celery, kohl rabi, Brussels sprouts, $1.25 per 1000; tomato, all kinds, $2.00 per 1000; cauliflower, peppers—$3.00 per 1000; egg plants, $4.00 per 1000. Send for list. J. C. Schmidt, Bristol, Pa.

FIELD GROWN frostproof cabbage plants, 5000—$7.50; 10,000—$10.00; 50,000 and over 90c per thousand, f. o. b. here. Tomato plants May and June delivery, same price. Scott Bros., Wholesale plant growers, Franklin, Va.

ASTER and larkspur plants. Large, flowering, giant branching, beautiful colors, strong, hardy plants. Guaranteed to please you. 3 doz. 50c; 100-$1.25, by mail postpaid. John B. Miller, Route 1, Kinzers, Lancaster County, Pa.

MILLIONS frostproof cabbage plants, leading varieties 1000—$1.75; 500—$1.00, postpaid. 20,000 and over $1.00 per thousand, charges collect. Tomato plants May and June delivery, write for low price. East Va. Plant Farm, Franklin, Va.

EARLY VEGETABLE PLANTS prepaid. Cabbage plants, $2.85 per 1000; cauliflower plants, $1.75 per 1000; onion plants, $2.75 per 1000. Tomato, celery, pepper plants ready April 10—50c per 100. David Rodway, Hartly, Del.

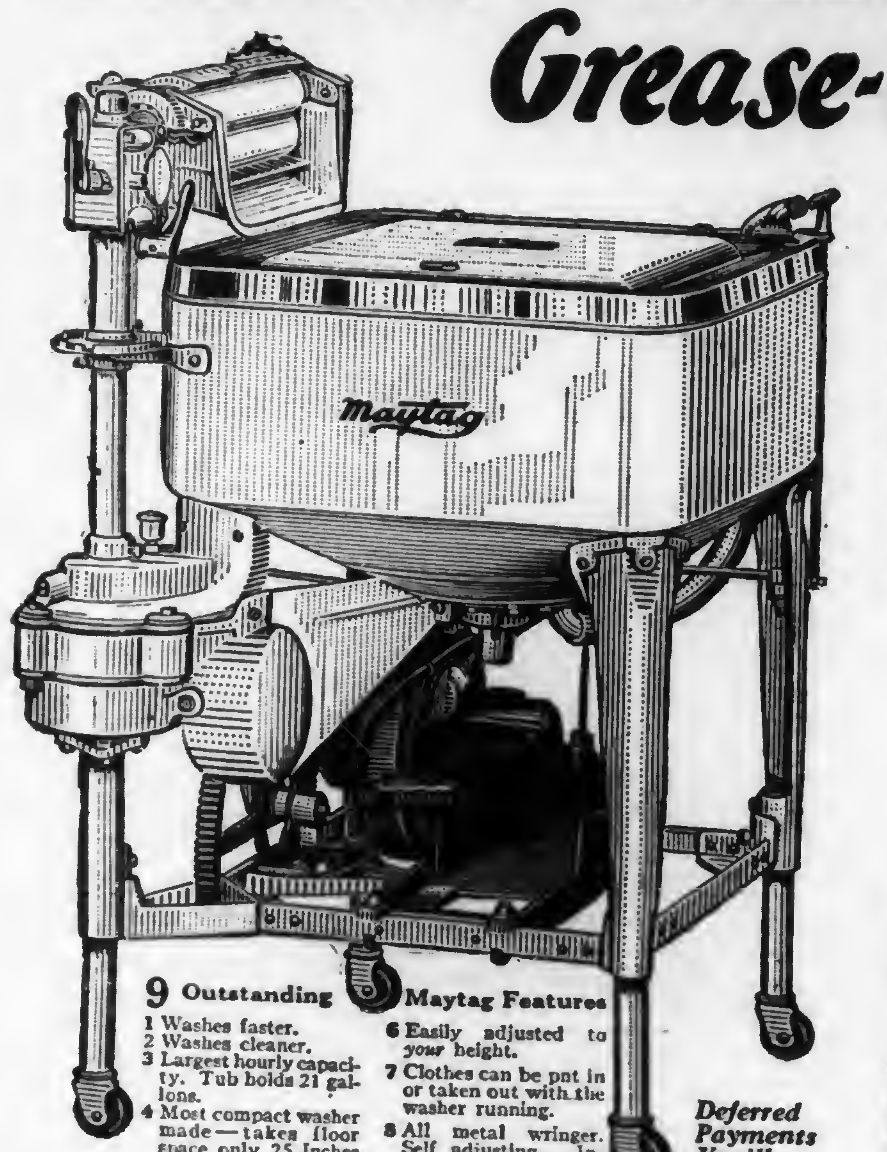
COPENHAGEN cabbage plants, $1.00—1000; tomatoes, $1.00; Ruby King pepper, $2.00; sweet potatoes, $2.00; onions, $1.00. Large open field grown. Prompt shipment. Quitman Plant Co., Quitman, Ga.

PLANTS—Leading varieties, open field grown, cabbage, $1.00—1000; tomato, $1.00; Ruby King Pepper, $2.00, prompt shipment. W. W. Williams, Franklin, Va.

CABBAGE AND TOMATO PLANTS—Leading varieties, $1.00 per 1000 expressed. Cash with order. James J. Councill & Son, Franklin, Va.

SEED POTATOES—Russets, Certified Cobblers, $3 bu. Cash with orders. Wm. Jones, Truxton, Cortland Co., N. Y.

TEST a MAYTAG on those Grease-Crusted OVERALLS



9 Outstanding Maytag Features

1 Washes faster.
2 Washes cleaner.
3 Largest hourly capacity. Tub holds 21 gallons.
4 Most compact washer made—takes floor space only 25 inches square.
5 Cast aluminum tub—can't warp, rot, swell, split nor corrode—cleans itself.
6 Easily adjusted to *your* height.
7 Clothes can be put in or taken out with the washer running.
8 All metal wringer. Self adjusting. Instant tension release.
9 Electric motor for wired homes—Gasoline motor where no electricity is available.

9 Reasons for World Leadership

Deferred Payments You'll Never Miss

Any farm home, with or without electricity, can enjoy a genuine Maytag Aluminum Washer. Ask the dealer to send you one on *free trial.*

Watch the marvelous Maytag Gyrafoam action wash a big tubful of clothes in 3 to 7 minutes. See it wash grimy overalls, work-clothes, even cuff and collar edges clean *without hand-rubbing.*

Enjoy the convenience of the big-capacity, cast-aluminum tub that's all washing space, that keeps the water scalding hot, that cleans itself in thirty seconds—the lifetime tub that cannot rot, rust, split, warp nor corrode, and that drains itself.

Enjoy the all-metal automatic tension wringer that swings into seven positions. Enjoy all the Nine Outstanding Maytag Advantages listed here. Enjoy a Maytag whether you have electricity or not.

In-Built Gasoline Multi-Motor or Electric Motor

The in-built gasoline Maytag Multi-Motor is a powerful, smooth-running, dependable little gasoline engine. Starts with a turn of the foot lever and does a big farm washing with a few cents' worth of gasoline.

For homes with electricity, the Maytag is built with an electric motor.

FREE TRIAL for a Whole Week's Wash

There's no cost, no obligation whatever in trying a MAYTAG. Call any Maytag dealer listed below and ask him to send you a Maytag Multi-Motor or a Maytag Electric Washer. Then give it a *real* test. Put in those grease-crusted overalls and work-clothes—don't hand-rub anything. Just let the Gyrafoamed soapy water in the cast-aluminum tub do the cleaning. Your dainty garments will be washed as safely as if done by hand.

State College looks for ways to cut the farm power bill. Pests that bothered early colonial farmers. Page 3.

Let's put back what we take from the soil

MEN who make good money at farming are very careful to keep their soil fertile and rich. They realize that there are poor years and good years in farming but that the man who puts manure on his fields in the right way will reap big profits.

The McCormick-Deering Manure Spreader is one of the most valuable machines on the farm. It increases yields, pays for itself in a hurry and goes on building bank accounts.

It spreads smoothly and evenly, putting on just as light or just as heavy a coat as you want. The pitchfork method of spreading cannot equal the yields that follow the McCormick-Deering. That has been proved many times. Besides, hand spreading is hard work; the McCormick-Deering saves many hours of time and much hard labor. Its good strong beaters tear the manure rapidly and spread it well beyond the wheels.

See the real wide-spread spreader at the local dealer's store.

McCormick-Deering

Turn the handle 55....45....35 times a minute *but—*

—skimming never varies in the Sharples

Suction-feed, the great cream-saving separator principle takes care of that. Faster turning means faster skimming. Slower turning means slower skimming—but absolutely clean skimming in the Sharples Separator. And ONLY IN THE SHARPLES. Because only the Sharples sucks milk up from below.

This also makes possible the comfortable knee-low supply can—found only in the Sharples. Cut out separator drudgery and cream losses with a Sharples.

Talk this over with our dealer. Write for his name.

Important to Employers!

The Workmen's Compensation Act became effective Jan. 1, 1926, but it seems some employers ignore their obligations, intentionally or through misunderstanding. Failure to provide protection to employes makes the employer liable to a heavy fine in addition to the paying of benefits in accordance with the Compensation Schedule.

Our Policy furnishes complete protection as required by the Compensation Act, and if the employer wishes, we can protect him against accident, while engaged in his work, or at all times during the day and night.

Our policyholders are receiving a large return premium each year. (17½% was returned to them in 1924 and 1925) when their premiums were above the minimum.

Pennsylvania Potatoes

Price Isn't Very Sensitive to Local Production Now

By ELMER R. BIDDLE

PENNSYLVANIA, altho one of the principal late potato producing states, does not fully supply her home markets. According to records of receipts of the fifteen larger markets of the state, more than 6000 cars of potatoes are brought in from other producing areas each year. In addition to being a great potato producing state, Pennsylvania is a great industrial state and has many consuming markets to supply.

The carlot shipments for the state represent a smaller percentage of the total production than do the shipments of any of the other states which have large potato producing areas. Only eight to twelve per cent of the total crop is loaded on cars, and a large percentage of these carlots never leave the state.

The report compiled from the railroad records by the Pennsylvania Bureau of Markets states that 3415 cars were received at the fifteen larger markets from state loading points during the 1925 season. This number exceeds the average of the past four years by 650 cars.

A New Phase the Last Ten Years

Because of the great demand for potatoes by the local markets and the necessity of bringing in so many cars from other producing states, total production in this state alone has little effect upon the price to the local grower. This phase of marketing potatoes has become most noticeable during the past ten years, as shown by the accompanying chart.

Previous to 1896 the price wave (as represented by the average price to growers on December 1) was very sensitive to local production. Short crop years were years of high prices, while in big crop years prices were proportionately lower. During this period there was little decided change in production other than the tendency to have increased production following a short crop and corresponding low and high prices. Between 1890 and 1900 the unsettled financial conditions of the country influenced the price fluctuations and prices did not always react to decreased production.

After 1900 we find a decided increase in production in the state with only slight price changes from year to year until the war period of inflated prices from 1916 to 1921. This past season has been an outstanding example of the effect that production in other sections of the country has on local prices. In spite of a crop somewhat larger than that of the previous season, the price to the grower averaged $1.94 compared with eighty cents in 1924.

The great growth in the potato industry of practically all the northern states in the West, especially Idaho, the Dakotas, Minnesota, Wisconsin and Michigan, has taken the control from the Big Three in the East, namely Maine, New York and Pennsylvania.

Notwithstanding the high freight rates, transportation facilities are now available to quickly change the local markets. High prices will draw supplies, if they are available, from far distant points, and it is unlikely, when the area of production is so great, that crop failures will be general.

Yields of 400 bushels or more per acre are not impossible under Pennsylvania conditions as has been proved by the state's "400 Bushel Potato Club."

A comparison of average acre yields since the Civil War shows a gradual decrease from about 100 bushels in 1870 to a five-year average of seventy bushels for the years 1888-1892, and then an increase to a five-year average (1921-1925) of 108 bushels.

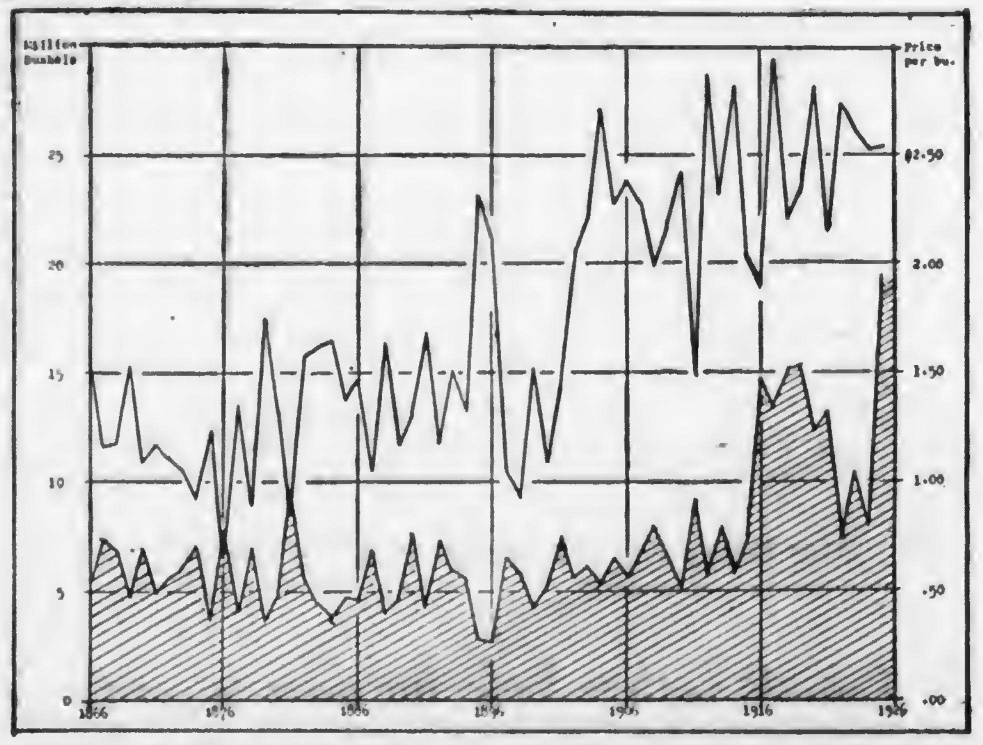
Stating this increased efficiency of potato production in 1890 in another way, the production in 1925 was almost twice that of 1890 while the acreage was only about six per cent greater.

One-half of Pennsylvania's 1925 potato crop was grown in ten counties,—Lehigh, Berks, Schuylkill, Lancaster, York, Northampton, Erie, Bucks, Luzerne and Somerset. These ten counties had a combined acreage of 80,940 and an average yield per acre of 137 bushels. Lehigh, the leading county, produced 2,095,100 bushels or almost twice the production in any other county and almost one-twelfth of all the potatoes in the state.

Potato Acreage Has Changed

The acreage planted to potatoes in Pennsylvania has changed during the past sixty years more than for most of the state's principal crops. In 1866 the potato acreage was estimated at 157,471. In 1871 it had dropped to 104,901, the lowest on record. Since 1880 there has been a gradual increase, reaching its peak in 1917 with a war acreage of 321,000.

The 1925 acreage was only slightly less than that of 1924, but the estimated crop was slightly larger, and the total farm value was the greatest on record, being estimated about $10,000,000 greater than in 1917.



Relation of price to production of Pennsylvania potatoes, 1866-1925. Shaded line shows price; upper line indicates production.

Less Money for Labor and Power

State College Is Looking for New Ways to Reduce the Cost of Producing Crops

HOW can we produce crops in Pennsylvania and other eastern states without spending so much money for labor and power? Experiments designed to find an answer to that question were begun recently by the Department of Agricultural Engineering at the Pennsylvania State College.

Records of a four-year survey of Lancaster County farms showed power and labor to be the largest items of expense to the farmers. In fact, from 45 per cent to 65 per cent of the cost of producing the principal crops had to be charged against these two items. Such expenses as taxes, seed, fertilizer, interest on investment, and depreciation are relatively fixed ones, and labor cost fluctuates slightly. That leaves power as the most promising item to be studied in the effort to find a way to reduce the farmers' expenses.

Saving Labor in the Wheat Belt

This two-man outfit cuts the heads off the wheat, threshes out the grain and delivers it to the wagonbox. The straw and chaff go back on the ground for fertilizer.

Last September about 110 acres of the College farm were allotted to be used in an attempt to discover which are more economical in furnishing power for the farm, teams or tractors, and to determine why. The work is well under way and has been greatly facilitated by the generous donations of several manufacturing companies. Such farm machinery as a tractor, cornpicker, plow, disc harrow, spike-tooth harrow, spring-tooth harrow, hay loader, potato planter, grain drill, corn planter, binder, mowing machine, hay rake and sprayer have been sent for research purposes.

To Determine Ways to Reduce Operation Costs

Another purpose of this work as it is being carried out by the Department of Agricultural Engineering is to determine some means to reduce the cost of expensive farm operations, either by changing the present equipment or by providing new equipment. For the farm tractor is quite well perfected so far as its ability to produce power is concerned. However, the machines which must be operated by the tractor are not all adapted to it.

The great number of tractors in use in Pennsylvania more than justifies these experiments to determine ways to use tractor power more effectively. During the years from 1920 to 1924 the number of farm tractors increased in Pennsylvania from 5000 to over 19,000, a gain of over 224 per cent. Yet this enormous increase took place during a period of depression.

According to the Department of Agriculture at Harrisburg, there has been a decrease in farm work horses of 18 per cent from 1920 thru 1925. Thus, the evidence indicates that the eastern farmer finds some advantage in using tractors with his horses. This same Department reports in 1926 that 51 per cent of the farm horses in Pennsylvania are now over nine years old.

A Versatile Farm Hand

Suppose one pays $50 to $60 per month for one year for a two-plow tractor, Mr. Blasingame suggests. Where can anyone get a man for the same price per month and get him to do what the tractor will do? It will plow, harrow, drill, mow, rake and load hay, pull the binder and manure spreader, bind corn, fill the silo, thresh, cut wood, chop feed and cultivate. These are some of the many reasons for the rapid adaptation of power farming and power equipment in the East.

Experimental data and suggestions for change or for improvement will not be forthcoming until this study has gone to completion, probably in three or four years.—E. H. R.

Colonial Farmers Had Their Troubles

The Pests That Bothered Them Were Like Ours—Only Worse

HISTORIANS, in recording the trials and tribulations of the pioneer farmers in Pennsylvania, have much to say about the pests which proved a menace to crops.

Wheat was one of the most valuable staple crops grown at that time and the wheat grower fared well until soon after the Revolutionary War, when the Hessian Fly became troublesome. It is believed the Hessian fly was introduced from Germany in straw which was used as beds in the ships which brought the hired Hessian soldiers to this country in 1776. The ravages of the fly were very great in 1786, 1788, 1791 and 1792. So bad did the loss become and so intense was the feeling in Europe, that the King of England issued a proclamation prohibiting the entry of any wheat from the United States into Great Britain.

The most destructive enemy of the corn crop was the crow. One historian reports, "Crows were once so abundant that fields of corn were laid waste by thousands alighting on it at once, with appetites whetted by the fast of the preceding night. In the early part of May, and sometimes till the middle of June, this predacious bird would appear in the corn fields, dig up the newly planted grains of corn, pull up by the roots that which had vegetated, and thus frequently, farmers were obliged to replant two or three times. As early as 1701, the Assembly offered a reward for their destruction. However, they were so numerous as to draw too heavily on the treasury and the act was repealed."

Squirrels of all kinds were also very destructive. In an attempt to curb their depredations, a bounty was offered as for crows. The outcome is described as follows, "They did not only exhaust the public treasury, but consumed the corn."

Peas were grown by the early settlers but in 1752 the pea-weevil made its appearance and caused so much loss that the crop was no longer grown.

Many Peach Trees Destroyed in 1760

One of the histories states that peach growing was common among most of the early settlers but about 1760 "a worm appeared, (probably the peach tree borer) which preyed upon the mucilage of the trunk of the peach tree, near the ground, and caused thousands of peach trees to die." From that time, until 1800, peaches were not so abundant.

Wild animals proved very destructive to the livestock of the pioneer. Sheep and swine were seldom raised by the first farmers because of the ravages of the bear and wolf. The fox was a very common depredator on poultry yards and the bear frequented the orchards and gardens playing havoc with young trees and vegetables.—Geo. F. Johnson.

He Was Fussy, But His Mowing Machines Lasted Forty Years

IN FORTY years of farming, making from 50 to 75 tons of hay yearly, my father used only two mowers. The machine was seldom left in the field overnight—never if there was any sign of rain. As a boy, I thought this a little fussy, but am not so sure now.

Recently I saw a tedder, wheel rake, mowing machine, lever harrow and small tractor that had wintered out of doors. In every case the owner had barn or shed room sufficient for housing the implements, which in two instances stood right beside a shed. One of these farms bore a conspicuous sign: "Member of County Board of Agriculture."

Everyone knows that farm machinery should not be stored out of doors, and is likely to feel duly regretful when trying to get the implements limbered up for the season's work, but the matter of oiling is different. Few men other than those with mechanical training know much about oil and its uses.

Prevent Dry Bearings—Oil Mower Frequently

Some men run a mower half a day with only two oilings. Before starting, they go over the machine with some care, touching the oiling places they have noticed, and about the middle of the forenoon drop a little oil on some of the bearings again. Meanwhile the machine has been pounding hard, especially if the knives were ground with a short bevel and considerably dulled.

Just how often to oil can best be learned by observation. Any run-dry bearing has gone too long. Oils are now scientifically prepared, so that suitable ones may be had for all purposes. If too light a quality must be used, closer attention to the bearings is necessary. The point is to watch and listen to the machine.—W. H.

Seventy-six Hereford calves are being fed and taken care of by 72 boys and girls who are members of this year's Adams County Baby Beef Club, which is again the largest in the state. They will fatten their calves for the round-up and sale to be held at the State Farm Products Show in Harrisburg next January.

Vol. 93, No. 25 Phila., Pa., June 19, 1926 Whole No. 1518

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Look not mournfully into the past, it comes not back again. Wisely improve the present, it is thine.—Hyperion

The County Agents

THE number of counties in the United States having county agents in 1914 was 928. In ten years the number had increased to 2084. In the beginning the average salary of county agents was less than $1200, out of which he paid his own expenses. In 1924 the average salary was $2700, with an average appropriation of $1200 for expenses. In addition to the county agent, a very large number of counties also have home demonstration agents. The original work of the county agent was traveling among farmers and advising and demonstrating. Now it includes a great deal of office work as well. At first he dealt with adult farmers only; now, a large part of his activities is in connection with boys and girls.

Farmers have not been a unit in backing the work of the county agent in many places, and while there is a larger proportion now than at first, it is still true, that a large number in most sections make no use of the opportunities afforded. Why? We should be glad to hear from a large number of farmers on this subject, both those who make use of their county agent and those who do not and who disapprove of the plan.

Business Conditions

THE volume of business being done in the nation remains at high levels. The slump which many feared would come about midseason has not arrived and there are slight indications that any serious dropping off will occur soon. In some lines the peak of activity has evidently been reached and passed. This is especially true in the building and allied trades. Housing accommodations have been met and a shortage no longer exists. In fact, there are indications that there is a surplus of homes in many cities, especially of the apartment type, and this surplus is tending to lower the rental of many which were erected at excessively high cost.

Full employment at stationary wages continues in nearly every part of the country. Commodity prices have fallen a little in many lines, evidently because production has been slightly in excess of demand. On the whole, there is a leveling process at work and every indication points to a slow but sure adjustment of prices and wages.

Have You Bean Beetles?

THE bean beetle, a pest which has for years infested the southwestern part of the United States, made its appearance in southwestern Pennsylvania two years ago and will, no doubt, spread to other sections. The beetle feeds chiefly upon bean foliage and destroys the crop when it appears in large numbers. The insect is about one-fourth of an inch in length and oval in shape. It is yellow in color at first, changing to dark brown and has seven to eight small black spots on each wing. It looks very much like squash lady bug except that the black spots are smaller and more numerous on the bean beetle. If you find a suspicious character of this kind eating your beans capture him and send him to the Bureau of Plant Industry at Harrisburg. Ask the authorities for information on fighting this pest.

Holstein Decision Appealed

LAST week Judge John E. Fox, of the Court of Common Pleas of Dauphin County, reversed the decision of the State Secretary of Agriculture in the Holstein-Friesian case. He ordered that the same indemnity be paid for condemned cattle registered by the recently organized Holstein-Friesian Registry Association as is paid for animals registered by the fifty-year-old Holstein-Friesian Association of America.

It is evident that Judge Fox did not give much weight to the arguments against the recognition of a second registry association. Dairymen who have feared that this decision might bring endless confusion and financial loss to the cattle breeding industry will be glad to learn that the case has been appealed to the Supreme Court for final settlement.

They Oppose Improvement

THE fruit and vegetable growers of the country, together with the United States Secretary of Agriculture, have agreed upon the adoption of standard definitions and trade rules. The aim of the plan is to establish a code of ethics for the fresh fruit and vegetable trade and to provide a system of voluntary arbitration of trade disputes; also, to authorize the registration of all shippers and dealers who will subscribe to these rules.

But such a plan does not suit some of the dealers in these products. A small group are opposing its adoption and resolutions have been introduced into both houses of Congress to prevent the Secretary of Agriculture from carrying out the plan. Such a movement on the part of the dealers opposing it makes them marked men and clearly indicates the need of a plan which would weed out the produce brokers and commission men who practice dishonest and unethical methods. Their protest shows that the proposed plan should be made arbitrary by law and not left as a voluntary action.

Good Eggs and Others

AN EGG isn't necessarily bad because it is old. Many authorities believe that cold storage eggs have been unfairly discriminated against in price. Whether the present prices are fair or not, they certainly put a premium on dishonesty among egg dealers. There is so little difference between storage eggs and fresh ones that the laws intended to protect the public against fraud are practically unenforceable. As long as men can take low priced eggs out of storage, label them "fresh," and sell them at high prices without the buyer knowing the difference, there will be people willing to try such tactics.

Many feel that the only solution is to sell eggs according to grade only. There are indications that several states may repeal their restrictions on cold storage eggs, in an effort to permit the price range to be governed solely by quality.

Poorest Wheat Crop Ever

THE government crop report for June shows the condition of wheat to be the poorest in the history of the crop reporting service. The condition on June first was found to be 78.5 per cent of normal. This is 8.6 points below the estimate of last year on the same date, and 11.4 points below the average condition of the last ten years. Oats and corn are getting poor starts and are very late. In fact, all crops with the exception of fruits are below normal and the outlook at the present time for good yields is decidedly pessimistic. The condition of Canadian wheat is fair to good, but the reports of cereal crops in Europe show them to be below the average.

Brookhart Renominated

THE unseating of Senator Brookhart by the Old Guard forces in the Senate last year evidently did not "discipline" the Iowa farmers as the leaders hoped it would. The result of the primary held in that state last week showed that the farmers of Iowa are willing to back up their convictions by their votes. Altho there were six candidates for senator in the field, Brookhart received nearly as many votes as all the others put together. As a consequence of the primary, party leaders are "up in the air" about the irreconcilable farmer spirit of the Middle West.

Editorial Sidelights

"IS THE Sesqui-Centennial worth coming to Philadelphia to see?" Many readers have asked us that question during the last few weeks. In an early issue we shall give an up-to-date report on the Exposition so they may decide for themselves whether they want to come to see it.

We use that term "up-to-date" with reservations. The buildings on the 1000-acre Sesqui-Centennial grounds are springing up so rapidly that it is difficult to keep up with them. We have bought several of the newest Exposition pictures for our picture page, but before we could get them into the paper the scenes shown had changed so much they are really out of date.

For many years the farm specialists and county agents have been talking about better seed and better fertilizer as the proper means of cutting down the costs of producing crops.

A year or two ago Professor Blasingame, of State College, looked over some records on the cost of producing crops in Lancaster County and discovered that labor and power were the big things entering into the costs. Seed, fertilizer, etc., were trivial items when compared with the large amounts spent for man, horse and machine power.

Perhaps other farm engineers had made similar observations, but if so, they kept quiet about it. Professor Blasingame decided to do something.—to try to find ways to reduce those power labor costs. The new long-range experiments which have been started at State College are the outcome of that decision (Page 3).

Washington Letter

DAWES BACKS FARM RELIEF EFFORTS.—The present temper of western senators indicates a determination to put thru some sort of farm relief legislation. In this they are ably supported by Vice President Dawes, who after having consulted leading economists has reached the conclusion that the equalization fee system is economically sound. At a conference of farm organization leaders with a group of western senators, at which the Vice President was present, an effort was made to agree upon a farm relief measure which it was hoped the President would sign.

McNARY-HAUGEN PLAN FAVORED.—The McNary-Haugen equalization fee proposition, with several amendments, was favored. They would reduce the revolving fund from $250,000,000 to $175,000,000, of which $75,000,000 would be used for the disposal of surplus cotton. It was also agreed that the equalization fee provision be immediately operative on all of the five basic farm commodities, wheat, corn, cotton, cattle and swine. But the application of the equalization fee to a commodity would not be compulsory. The producers of any of the commodities would determine by a referendum when they wished it to become effective. It was decided not to include the embargo and the tariff provisions included in the Haugen bill.

STILL FIGHTING THE FOWL PLAGUE.—The European fowl pest, which appeared in the United States during the autumn of 1924, continues to cause trouble. By the end of June, 1925, excellent progress had been made in the eradication of the disease, and it appeared at that time that the disease had been stamped out. Since that time two minor outbreaks have occurred. The fowl disease is of such a nature that the Bureau of Animal Industry is not at the present time assured of its complete eradication from this country. It is still necessary to continue the inspection work and also to supervise the disinfection of cars regularly used in the transportation of poultry.—E. E. Reynolds.

Harrisburg Letter

MORE MONEY FOR COUNTIES.—Thousands of dollars of state money not requisitioned by counties as aid in construction of highways this year is about to be reallotted at the State Highway Department. What makes this redistribution of considerable importance is that with this year the money realized by sale of highway building bonds either will be used up or covered by authorizations, and Pennsylvania will be back on current revenues for road purposes.

HOLD UP BIG BUS LINES.—The Public Service Commission is holding up action on approval of charters or routes for the big bus and truck line enterprises the Pennsylvania, Reading and other railroads are forming, until a definite policy can be completed. For months studies of the situations in various parts of the state have been made and the final hearings on some propositions are just being held.

TO TRY FOREIGN TREES.—Arrangements are being made for state experimental planting of seeds of various foreign trees, especially of the north of Europe, which it is believed will grow rapidly and help in the problem of Pennsylvania's idle land. This year the experiments with poplars, cottonwoods, eucalyptus and other trees noted for rapid growth will be continued in the vicinity of Harrisburg.—Hamilton, Harrisburg.

New Jersey Letter

DISCUSS DEER NUISANCE.—Farmers are getting together with the New Jersey Fish and Game Commission for consideration of the deer nuisance. At the call of the state farm bureau, leading farmers from southern New Jersey counties where deer are most numerous met recently with the commission, and cited many specific instances of damage. The commission has asked the farm bureau to appoint a small committee to work with the commission in developing legislation to bring relief.

BARNHART IN SOMERSET.—Due to the continued illness of Harry C. Haines, county agent in Somerset County, A. S. Barnhart, recently appointed county agent at large in New Jersey, has been assigned to Somerset to carry on the work. Mr. Barnhart is well known in central New Jersey. More recently he has been assistant state club leader in Pennsylvania. He is a graduate of the Pennsylvania State College of Agriculture and has been in the extension service in that state for six years.

AUTO INSURANCE SAVING.—The New Jersey State Grange has just completed arrangements thru its association with the state farm bureau for offering its membership substantial savings on automobile liability insurance.—B.

His favorite program!

28% MORE MILK

—was given by cows at Cornell Experiment Station, fed four pounds of concentrates per head daily on pasture, than by cows of similar productive capacity which received no concentrates in addition to pasturage.

Rations
Recommended
By Prof. F. B. Morrison
of the Wisconsin Experiment Station

FOR SUMMER CONDITIONS

(1) Ground corn...300 lbs.
Ground oats...300 lbs.
Wheat bran...200 lbs.
Linseed meal..200 lbs.

(2) Ground corn...535 lbs.
Wheat bran...230 lbs.
Linseed meal..235 lbs.

(3) Ground corn...375 lbs.
Ground oats...375 lbs.
Linseed meal..250 lbs.

(4) Ground barley.615 lbs.
Wheat Bran...200 lbs.
Linseed meal..185 lbs.

Pasturage itself is an insufficient source of nutriment. Better supplement it, as do thousands of other successful feeders of all farm animals, with rations containing Linseed Meal.

Linseed Meal, with its high protein content, produces economical gains, insures good condition and helps make the best possible use of other feeds. How and why is told by successful feeders in our booklets—"Dollars and Cents Results" and "How To Make Money With Linseed Meal". Write our Dept. N-6 for them.

"When the Green Grass Grows all 'round"

THAT'S when old bossy enjoys herself—but lowers her milk production. She cannot eat enough to maintain her body reserves and her regular milk flow. In 100 lbs. of grass there are 3.7 lbs. of digestible protein, and only 15.9 lbs. of digestible feed. A cow would require 150 to 170 lbs. of grass daily, to maintain her production and her body. But she can graze only 100 lbs. of grass each day. The answer is plain—grass alone won't do!

BUTTERINE DAIRY FEED (17% Protein)
OR
HAMMOND DAIRY FEED (16½% Protein)

are the ideal supplements to grass—and hundreds of shrewd feeders know it. Use either one of these feeds and you will keep up a full milk production. You will get more milk now and more milk later. The cow's health and reserve will be maintained. She will be in condition to produce more milk on less feed next winter. You will make more money.

See Your Dealer Today!

Try a few sacks of Butterine Dairy Feed or Hammond Dairy Feed. If your dealer cannot supply you, write to us and we will make arrangements to supply you promptly. Act!

NOWAK MILLING CORP., Hammond, Indiana

Increase your CORN Profits— with these machines

HOW much does it cost to plant your corn? How much does it cost to handle it at harvest—for power—labor—time? These items determine your profit. That's why it pays to depend upon the efficient corn harvesting machinery built by Advance-Rumely. Our quality-built line includes—

Ball Bearing Silo Filler
Husker-Shredder—Corn Sheller

Each is a proved-out, specialized machine, designed and built by Advance-Rumely engineers—with special features and improvements that insure a saving of time, labor and power—*increased profits.*

Be prepared. Bring your equipment up to date. Investigate these quality implements *now*. See the local Advance-Rumely dealer or write us for our pocket size catalogs—*free.* Address Dept. AY

Advance-Rumely Thresher Co., Inc.
La Porte (Incorporated) Indiana

Columbus, Ohio Harrisburg, Pa.

The Advance-Rumely line includes kerosene tractors, steam engines, grain and rice threshers, combine harvesters, husker-shredders, alfalfa and clover hullers, bean hullers, silo fillers, corn shellers, motor trucks and tractor winches.

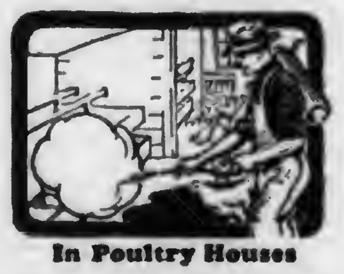
Serviced Through 33 Branches and Warehouses

ADVANCE-RUMELY

CARBOLA
The Disinfecting White Paint

Lice, Mites and Disease Germs Can't Stand It

In Stables



In Poultry Houses

In Hog Pens

Insures More Milk

Carbola is live stock insurance against tuberculosis, foot-and-mouth and other destructive diseases. Carbola will give you thorough sanitation, increase milk production, and lower the bacteria. A year's supply of Carbola pays for itself in no time.

More Poultry Profits

Apply Carbola to the walls, ceilings, cracks and crevices of your poultry houses. Dust the dry power—just as it comes in the package—on the dropping boards, in the litter, in the nests, on the floor and on the birds themselves. Result—more light, thorough sanitation, healthier fowls, more eggs—and no lice or mites.

Paints and Disinfects

Just mix Carbola with water and you have a liquid disinfectant that dries pure white. There is no waiting or straining. It will not flake or peel off. And it is economical—one pound covers about one hundred square feet.

Give Carbola a trial. Satisfaction guaranteed. Your dealer has Carbola or can get it for you. If not, order direct.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

AN ABUNDANCE of rain but a scarcity of heat. That sums up the weather conditions in eastern Pennsylvania for the first week in June. The same week last year found us sweltering in extremely high temperatures but it made vegetation jump. Now, with the exception of potatoes, peas, and alfalfa, it is almost at a standstill. Our first planting of lima beans came up, but the seed on some of them rotted after they got up in the air and before the true leaves could be formed.

✣ ✣ ✣

OUR last plantings of tomatoes and cabbage have had a favorable time to start, even if they make slow growth. The first plantings were hit by eight days of dry weather and cold winds which caused many of them to die. On the whole, everything is far behind in development when compared with the progress of the same crops a year ago. The melons are coming up but they need higher temperatures. We ate our first ripe strawberries this year on June sixth. Last year the first ones ripened on May thirtieth.

✣ ✣ ✣

WE APPLIED that chemical with the impossible name, paradichlorobenzene,—called P D B for short,—to the peach trees which showed signs of having borers in them. When this material was first tried out the authorities recommended that it be used only on trees of six years or more in age. Since then, experience shows that it may safely be used on younger trees. Our trees were planted two and three years ago and I shall report later as to whether or not any injury is noticeable. Since applying it a bulletin published by the Pennsylvania Department of Agriculture, Harrisburg, Pa., has come to hand. This gives full directions and will be found of interest to those who will write the Department for it.

✣ ✣ ✣

BECAUSE reports indicate that eggs were not hatching well this season and because weather conditions have not been favorable for young chicks we deferred buying baby chicks until late. Then we sent for 100 White Wyandottes. We sent to a hatchery from which a neighbor purchased the same kind last year, about eighty per cent of which came to maturity. They were vigorous right from the start and showed great vitality and appetites. But how foolish it is to gauge one year by another when raising chickens! Our chicks arrived on the first of June and by the seventh eighty per cent were dead. They were given to five good, motherly hens, but they were deficient in vitality and passed out of this cruel world without a struggle. They seemed to find that one week was enough of life.

✣ ✣ ✣

I RECEIVED a letter the other day asking what kind of people lived in two different neighborhoods and what kind of neighbors they made. The writer is thinking of changing his residence and is interested in these two places. Without in any way connecting him with it, I was reminded of a story I once heard relating an old Quaker's answer to a similar question. "And what kind of neighbors has thee where thee now lives?" the old man asked. "They are mean, narrow and selfish," said the inquirer. "Well," said the Quaker, "thee will find the same kind of people here." At another time a different man, thinking to locate in the same community asked the Quaker about the kind of people in the place. The Quaker asked him the same question, "What kind of neighbors has thee where thee now lives?" "Oh, I have the finest neighbors in the world. They are extremely kind and accommodating." "Well," said the Quaker, "thee will find the same kind here." It reminds me of a line in one of Alice Carey's poems,—"As you measure to your neighbor, he will measure back to you."

✣ ✣ ✣

THIS is the graduation month. Tens of thousands of the youths of the land will march up in double file and receive the coveted parchment tied with blue ribbon. This event will mark the closing of years of more or less hard work, and also mark the commencement of more serious things. It is one of the four great moments which divide life into its four chief periods. May their hopes be realized and their dreams come true! But more than all else I wish for them the wisdom and fortitude which they must have to meet and overcome the failures and disappointments common to all.

THE CHEERFUL PLOWMAN

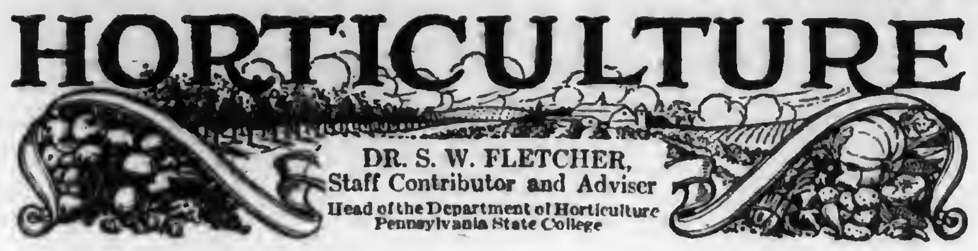
The Cream Can

THE cream can is singing a pleasant old song, it is singing a song to me, it tells me how as I jog along from daily bills I'm free. It sings, "Fi, fi on the sick old plan when you ran bills everywhere, when you owed McNitt and you owed McNann, and you owed McKnott and Nair!" It says, "Those days were a fright, indeed, when you ran your face for shoes, when you felt the pinch and you felt the need, and the cold ensuing blues that all must feel when the credit urge is gripping the heart and head, that all must feel when they see the splurge of ink that's done in red!"

The cream can sings, "I am here to aid the fellow with ready cash, to help the farmer who lives afraid of the auction's hammer crash. I'm here to purchase the hose and tea, to pay for sugar, too, I'm here to hamper the mortgagee and to give the wolf the 'Shoo!' I'm here to pay for the table salt, to pay for the odds and ends, to pile up coin in the safety vault, and to help you keep your friends!

"I'm here to give you some pocket dimes, to raise up your head and chin, I'm here, in a word, to improve the times, to bring more sunshine in! You shall run no bill at the corner store while I'm on the farm, old boy; you'll have no debts to grow dizzy o'er, and your life will be filled with joy!"—J. Edw. Tufft.

HORTICULTURE



DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Thin the Apple Crop in June to Make Fruit Larger

PRESENT prospects are for a rather heavy set of fruit on most varieties in the apple growing districts of the East; and there is now no doubt that Washington will have its usual good crop. In the Cumberland-Shenandoah region the York is reported as shy, but other varieties are promising. Apparently we are to have a year of abundant supply and comparatively low prices for all but the best fruit. Unless weather hazards intervene—as they may—there will be no profit in raising poor fruit this year.

Thru this section of the country the exceptionally dry spring has been very unfavorable for the development of scab, and there has been practically no red bug or rosy aphis. The chief threat this year is codling moth, which our entomologist friends tell us is likely to be unusually abundant, requiring very thoro spraying or dusting, especially at petal fall time and two weeks later, so as to make late summer applications of the arsenate unnecessary.

Yours for the Asking

ALTHO only one-eighth of an inch long, the pale-green potato leafhopper does severe damage to potato, bean, apple and raspberry crops in the Middle Atlantic States. The U. S. Department of Agriculture has published a bulletin that tells all about this tiny pest and how to control it.

You can get a copy of this bulletin by writing to the United States Department of Agriculture, Washington, D. C., and asking for Farmers' Bulletin 1462-F, entitled, "The Potato Leafhopper and How to Control It."

In restricted areas the European mite and the leafhopper may be a menace, as they were last year. In general, however, the present outlook is for a year when size and color will be relatively more important than pest injury, at least as compared with some other years.

To Get Size and Color

Size and color are the result of many favoring conditions, chief of which are good nutrition of the tree, an adequate moisture supply, open pruning, and the prevention of overloading. Thinning the fruit on our overloaded trees this spring will not compensate for nitrogen starvation, neglect of tillage or mulching (especially if the season continues dry) and brush pile pruning.

Thinning is expensive. It costs 50 cents to $1.50 a tree, sometimes more. The chief reason why more apple growers do not thin, however, is lack of labor. To be effective, most of the thinning should be done within three or four weeks after the June drop. Later thinning may be profitable as a means of preventing breakage, but has little value as a means of increasing the size of the individual fruits.

Comparatively few growers are able to thin the entire orchard in this brief period, when spraying and tillage are equally imperative. On most farms, the decision on whether to thin or not to thin will be determined more by expediency than by need. In this, as in so many other farm operations, the availability of labor is the limiting factor. With most fruit growers it is not so much a question of knowing what ought to be done, as of being able to accomplish it at the right time.

Feed—Prune—Till

This being the case, it is all the more essential to stress the operations that alleviate, tho they do not eliminate, the necessity for thinning. These are feeding, pruning, and tillage or mulching. The very dry spring has seriously reduced the effectiveness of nitrate applications. In some parts of the state not enough rain has fallen to carry the nitrate into the soil, even a month after it was applied.

The tree absorbs nitrates chiefly in early spring, and but little after midsummer, so that much of this year's application will be lost, particularly as to its effect on the formation of fruit buds for next year's crop. Open pruning, by reducing the bearing surface, gives a larger proportion of roots to top, and so favors large size of fruit.

The best time to prevent the overloading of an apple tree, or a peach tree, is in March, not in June, using the pruning tool, not the thinning shears. Some thinning may be necessary in June, also, but it should merely supplement what has been done in pruning.

Hand Thin Certain Varieties

Hand thinning is most likely to be profitable on varieties that tend to run small, as Jonathan, Grimes, Old Winesap, Delicious. It is less likely to pay on varieties like York. Some can do the work better by pinching off the fruit with the hand than by cutting with thinning shears.

Leave but one fruit on a spur, and the fruits five to ten inches apart, according to variety and strength of tree. It is easy to sink a lot of money in thinning if slow-motioned workers are employed. They should be quick, and ambidextrous. The ground will be carpeted with green fruit when the job is done, which may give the owner a sinking feeling in the pit of his stomach, but his spirits are likely to be revived by October.

Altho little benefit in size is secured by thinning after about the middle of July, it is always in order to continue to thin certain over-loaded limbs that are liable to break.—S. W. Fletcher.

Pinch off the Blacks

DON'T let the black raspberry, purple cane and blackberry bushes ramble all over the place. Pinch off the ends of young shoots when they reach a height of about 18 inches; that will encourage the growth of lateral branches, keeping the bushes more compact, easier to pick, prune and work around.

But don't pinch off the red raspberry shoots, advises the New York State College of Agriculture. When the reds are pinched off, suckers and weak, spindling laterals are apt to grow. These are less desirable than single, well-matured canes.

Patient—Doctor, will the anesthetic make me sick?

Doctor—Not a bit.

Patient—Well, how long will it be before I know anything?

Doctor—Aren't you asking a good deal of an anesthetic?—Yale Record.

Here's a mighty good tire at a money-saving price

BUILT, branded and guaranteed by Kelly-Springfield. Full size, full ply and carefully built throughout. Not skimped to sell at a price; all four inch sizes are six ply as against four and five ply in the majority of tires in the same price class.

For the man who wants good, moderate priced tires, Buckeyes are the best tire value on the market today.

It doesn't pay to buy tires by mail when you can buy Buckeyes from your local Kelly dealer. He can sell them to you at prices that will save you money—and you get your tires without waiting.

Take a look at the Buckeye line—fabric, cord and balloon cord—the next time you are near the Kelly dealer's store.

KELLY-SPRINGFIELD TIRE CO.
250 West 57th Street New York

BUCKEYE TIRES
Built by Kelly-Springfield

From Whole Root Imported Seedlings

—that is how Kelly trees are propagated, not on piece roots. That is why they are stronger and healthier and give bigger and better crops.

You can be sure of your fruit before you plant Kellys because, every season, the Massachusetts Fruit Growers' Association inspects and certifies over 85,000 of our trees to be "True-to-Name". And we also guarantee every Kelly tree.

Talk to the owners of Kelly Trees in your neighborhood. We will gladly send you their names.

Write for the big Kelly Catalog. Then order soon to get your share of our guaranteed "True-to-Name" stock. We have no agents—you deal direct with us.

"More Than I Can Hold"

Neither of You Can Do This

Suppose you were expected to eat—every day—four times as much food as your stomach will hold—what would you do about it? You'd say "It can't be done."

The stomach of a 1400-pound cow will hold about 60 quarts. This much grass will fill a large gunny sack—packed tight—and it will weigh about 35 pounds.

Such a cow would have to graze and hold four such sacks of grass every day to get feed enough to do a good job of making milk for you and keeping herself in good condition.

Grass is good as far as it goes, but no cow can graze or hold as much as she needs. Every dairy cow needs a Corn Gluten Feed mixture—three pounds or more per day—with her grass. Here is a good one:

300 pounds Corn Gluten Feed
300 pounds Ground Corn
300 pounds Ground Oats
200 pounds Wheat Bran

CORN GLUTEN FEED 23% protein The Protein Product of Corn

Cows will continue to give milk on grass alone, but they will take the most of it out of their own bones, blood and tissues. It is then that they go dry weeks or months before they should.

Our new 64-page book—"The Gospel of Good Feeding"—tells how to feed Corn Gluten Feed in a way that will make you more money. Write for a free copy.

The Proven Silo

Year after year the Unadilla has been piling up silo satisfaction for its purchasers.

Year after year Unadilla owners have found that they have perfect silage, made and kept at the *lowest possible cost*—

that the air tight doors conserve *all* the valuable juices—

that the silo itself is *strong, durable, well built*—

that *above all* the Unadilla is *SAFE* and convenient to use. The permanent safety ladder, formed by the door fasteners, is *secure.*

The hoops are easily adjusted from this ladder—doing away with risk of adjusting from dangerously slipping ladders.

These features and the long life and storm-defying character of the Unadilla are some of the reasons *why* so many thousands of dairy owners in the East buy the Unadilla.

Write for information on this proven success. Ask us also about our water tubs, vats and storage tanks.

Knollcroft Farm Dispersal Sale

85 Registered Holstein-Friesian Cattle 85

Tuesday, June 29, 1926

DINNER AT NOON—SALE UNDER TENT—STARTS 9 A. M. SHARP—SURE.

Sale held at Knollcroft Farm, located 30 miles from New York City, 1 mile from Lyons, N. J., on D. L. & W. R. R., 3 miles from Basking Ridge, two and one-half miles from Millington, and 11 miles from Summit, N. J. Parties met at Lyons railroad station by appointment.

Herd established 11 years—constant improvement—rigid selection. Free from blemishes.

Entire herd shows average test of better than 3.5%

Milk product sold monthly for about $2,000.00.

Every animal, including two year olds, must produce 9,000 lbs. of milk under regular dairy conditions, twice a day milking, to stay in the herd.

Entire herd founded on only 7 of the best foundation cows. 31 daughters of 1 sire; 26 daughters of another sire. 33 cows in the sale have made official records.

Herd Fully Accredited for 4 years—60 day retest.

ABSOLUTELY FREE FROM ABORTION.

Two herd sires—one from a 30 lb., 4 year old to be sold.

EVERY ANIMAL BUT THREE BRED AND RAISED ON THE FARM "THE EAST'S GREATEST 1926 DISPERSAL SALE"

Points to Consider if You're Thinking of Going into the Retail Milk Business

ANSWERING the questions of an eastern Pennsylvania reader who plans to go into the milk business, I shall give my own thought on the matter for what it is worth.

1. In order to warrant the running of a retail route with one or two men the herd should be of sufficient size to produce 400 to 500 quarts of milk daily. This would amount to about 30 to 40 cows, depending upon their production.

2. The cost of grade cows which will produce from 6500 to 10,000 pounds of milk yearly would run approximately $135 to $150 per head.

3. The cost of a milk house and equipment, aside from the dairy barn, to properly take care of the milk and cream, I would estimate approximately as follows:

Milk house	$ 400.00
Milk pails, strainers, etc...	20.00
Milk cooler	15.00
Milk cans	50.00
Milk bottles, caps, & crates.	100.00
Bottling machine	600.00
Wash sinks	50.00
Steam sterilizer	30.00
Milk scales	5.00
Cream separator	125.00
Mechanical refrigeration outfit	3000.00
Delivery truck	500.00
Other general expenses....	1010.00
Total	$5905.00

Of course, this amount would be lessened considerably if you do not put in a mechanical refrigeration outfit. These items are for equipment outside of the dairy stable. They are simply an estimate on my part.

Hay and Grain Needed

4. An estimate of one ton of hay per cow, three tons of silage, and one and one-half tons of grain per year will probably not come far from meeting the actual conditions of the dairy farm. This is on a basis of 200 days feeding in the barn and the balance of the year the cow is to be out on pasture.

5. Some costs that are incidental to the operation and maintenance of a herd are: feed, bull service, bedding, forks, shovels, ice, veterinary service, cow testing association fees, interest on investment, tuberculin testing, abortion testing, stable equipment, milking machine labor, etc., etc.

6. The amount of lime necessary to raise sufficient feed for a cow depends upon the intensiveness with which the farm is operated and whether the grain feed is raised largely on the farm or is purchased. On some small farms one cow per acre is kept. This is done by raising most of the hay and silage and by purchasing most of the grain feed.

Farm surveys show that an average of three to four acres of tillable land per animal unit is the most successful relation between crop acres and animals. If you had 30 cows, this would mean that you should probably have from 100 to 150 acres of tillable land for best results.

In planning a rotation, provision should be made for raising a cash crop such as potatoes, cabbage, or beans, so as to provide a cash income from crops as well as the production of sufficient quantities of feed for the livestock. I should feel that a pretty good general rotation for your section would be as follows:

1st year—corn and potatoes
2nd year—oats or barley
3rd year—clover or alfalfa

8. The medical attention necessary for such a herd will depend largely upon the care and management of the cattle. An estimate of from $25 to $50 for the herd per year would probably not be far wrong.

Dual Purpose Breed Won't Pay

9. It would not be profitable for you to attempt to go into the dairy business with a dual purpose breed. Such animals produce too small an amount of milk to be most profitable. The dairy cow when she has finished her life in the dairy is sold to the butcher for $30 to $60.

In general, I might say, that surveys have shown that there are four important factors for a profitable farm. First, a good sized proposition including at least 100 acres of tillable land or more and a dairy herd corresponding in numbers.

Second, good crops. Sufficient fertilizer, manure, etc., should be applied to raise crops which are approximately 30 per cent higher in yield than the average for the neighborhood.

Third, good cows. To be really worth while a cow ought to produce at least 7000 pounds of milk in a year. Buy animals that have been tuberculin tested, also animals on the blood test, to insure that your herd will be free from contagious abortion. You can afford to pay more money for the animals in order to get those free from disease.

Fourth, diversity of income. The farmer should have at least four substantial sources of income each of which will pay from $200 up for the farm. For instance, he may have his dairy herd as the main enterprise on the farm. He should also have a good flock of poultry and should raise a cash crop such as potatoes, cabbage, etc. He may also keep bees or have a truck patch, an orchard, swine or some other enterprise.

There is lots of hard work in the dairy business and it takes an active energetic man to put it across in good shape, but it is a business of which a man may well be proud.—B.

A Sermon by Roosevelt

A MAN must be honest in the first place; but that by itself is not enough. No matter how good a man is, if he is timid he cannot accomplish much in the world. There is only a very circumscribed sphere of usefulness for the timid, good man. So, besides being honest, a man has got to have courage, too.

And these two together are not enough. No matter how brave and honest he is, if he is a natural born fool, you can do little with him.

Remember the order in which I name them. Honesty first; then courage; then brains, and all are indispensable. We have no room in a healthy community for either the knave, the fool, the weakling, or the coward.—Theodore Roosevelt.

League's Annual Meeting

DAIRY farmers of the New York Milk Shed will meet in Buffalo, Thursday, June 17, for the fifth annual meeting of the world's largest dairymen's cooperative marketing organization, the Dairymen's League Cooperative Association, Inc.

Outstanding developments which will receive the attention of speakers at the Buffalo meeting are:

1. Threatened invasion of the New York City fluid milk and cream market by western milk produced under conditions which gave it an advantage over eastern farmers producing under strict regulations.

2. Launching of a movement to bring all dairymen of the New York territory together in one "united dairymen's cooperative" organization to abolish factional strife in marketing and improve conditions for producers and consumers alike.

3. Revelations of graft in New York City in connection with importation of bootleg milk and cream from unapproved sources, and adulteration with water of pure, high-testing milk.

The annual meeting is strictly a business session, and the 1000 accredited delegates will devote all of their time to its business. This is the first time the League has held such a meeting west of Utica.

Prices and Prospects

NEW JERSEY is becoming an important source of supply for strawberries. In spite of the cool weather supplies have been increasing in Philadelphia. The quality of the stock has been generally good but following several of the heavy rains there was considerable soft stock.

Shipments from Virginia have practically stopped and Maryland and Delaware have about reached their peak. Prices are running somewhat lower than at this time last year. Pennsylvania stock has not yet appeared on the market while last year at this time considerable had been offered.

The new potato market has declined during the week ending May 8th. Shipments are increasing and altho price levels are about one-third of the season's opening price they are still higher than at this time last year. Shipments from the Eastern Shore of Virginia have started and the crop in that section is looking well. Heavy shipments are expected from the Norfolk section by June 14th.

Fewer Potatoes from South

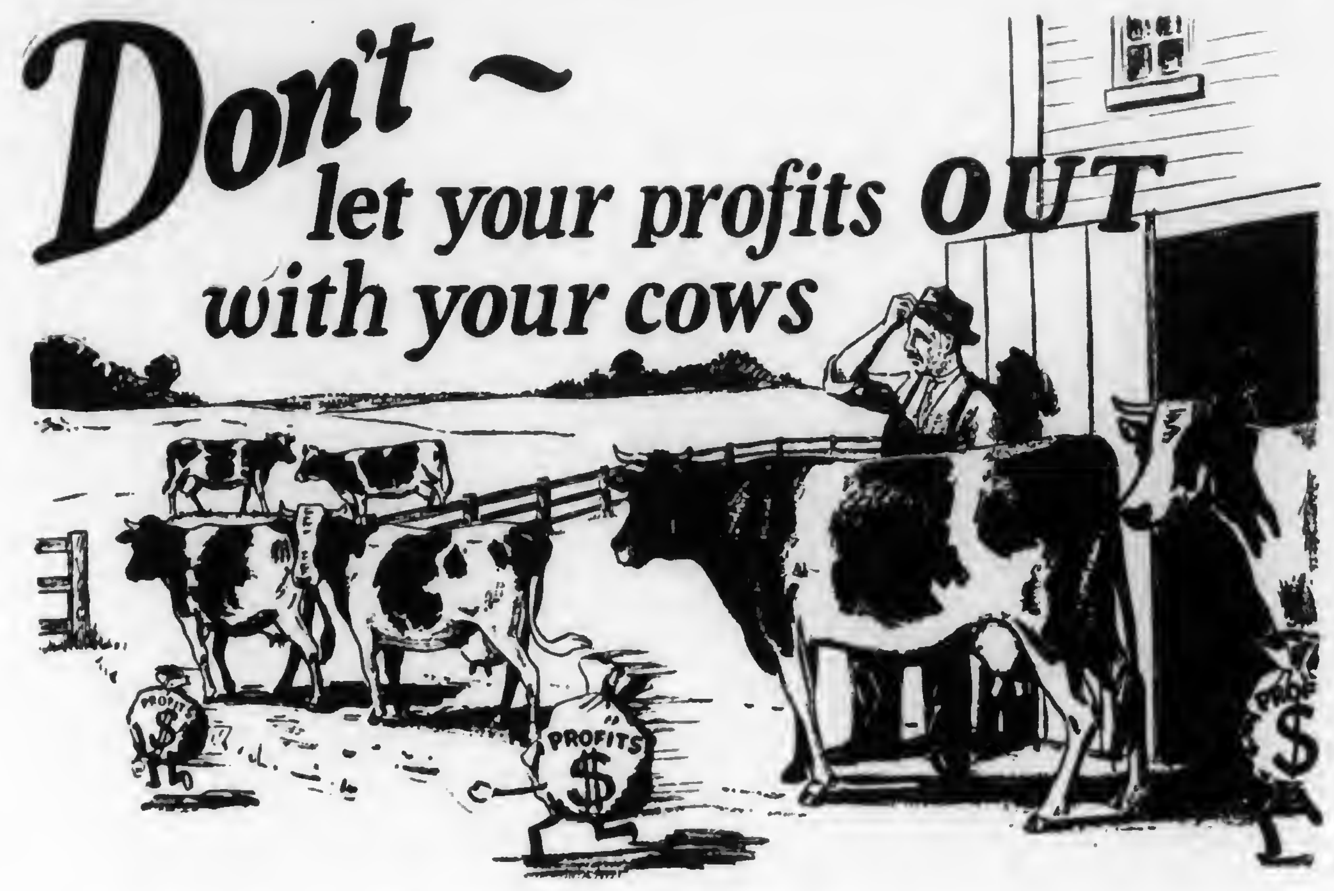
The movement from South Carolina is expected to fall off around this time and Georgia's early crop will be over by about the 16th of June. It is estimated that shipments from the early potato states east of the Rocky Mountains for the period June 8 to June 14 will run approximately 3710 cars.

Continued dry weather in the hard winter wheat belt and in the Pacific Northwest was a strengthening factor in the wheat market during the week. Weather conditions in Canada were favorable and prospects thruout the western provinces were good. Cash prices of hard winter wheat advanced 12c to 14c per bushel at Kansas City and Omaha.

The corn market held steady with a fairly active demand. Corn plantings have been practically completed and the growth has been good in most of the Corn Belt. It is still too cool and dry for best growth in Ohio.

Nearby white eggs met a good demand on the New York market during the week ending June 9th. Prices were somewhat higher, especially on the fancy grades. Receipts continued to show a slight decrease. Buyers continued to complain of poorer average quality in the current

(Continued on page 17)



Don't ~ let your profits OUT with your cows
PROFITS
$
PROFITS
$
$

Everybody knows that grass is good for cows—Nature's own feed—just about all cows got to eat—or needed—when their only job was to supply enough milk to nourish their calves. Now we demand a lot more milk from a cow.

If we are to get more milk than Nature intended we must feed our cows more than Nature provided.

So remember that even the best of pasture is not enough. Cows may temporarily be stimulated by the change to fresh grass, but don't let that deceive you.

The simple truth is that cows cannot keep on producing to the limit of their capacity on pasture alone. The milk yield soon falls off, and cannot be brought to normal until the cow freshens again.

Unless she is to fall off in condition and slump in milk yield, a dairy cow producing 35 lbs. of milk would have to eat 175 lbs. of good pasture every day. That's an impossibility, for few cows can eat more than 90 lbs. of grass in one day, even from the most luxuriant growth. Heavy milk production has to come right off their own backs.

To maintain condition, production and profits, feed your cows 1 lb. of Larro for each 5 lbs. of milk they produce when pasture is plentiful and good, with a gradual increase in the amount of Larro as the grass dries up.

Feed Larro with pasture and avoid the loss in milk and money you are sure to suffer if you depend entirely on grass this summer. Do this and your cows will go into the fall in condition to make the most milk when more milk means more profit.

THE LARROWE MILLING COMPANY
Detroit - - - - Michigan

Larro

FEEDS THAT NEVER VARY
FOR COWS, CHICKENS AND HOGS

(630)

For three years before Larro Poultry Feeds were offered for sale they were made to prove their right to the name Larro in a series of carefully checked feeding tests. In every test the Larro-fed birds produced more eggs and developed quicker, with less mortality than those fed on any of the better known rations now available. The regular use of Larro Poultry Feeds will add greatly to your profits, too. Ask your dealer.

A Crasco Now can be A Craine Later!

Why go without the profits a good silo earns for you year after year?

If you want a good stave silo, get a Crasco now. Use it several years. Then, if you wish, have it covered and made into a *Craine Triple Wall*—the most permanent, frost resisting, silage saving and trouble free silo made!

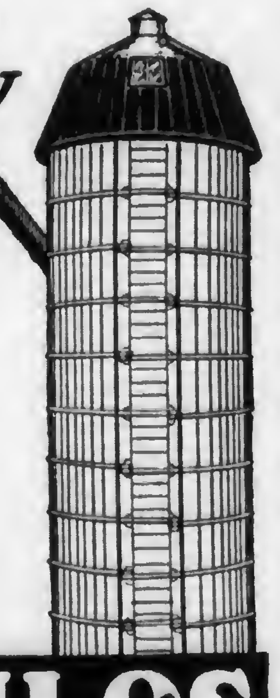
HARDER SILOS



ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his sick comrade, Private Pelletier. Leaving the sick man, MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." The box had held Deane, the murderer.

Soon a party in search of Scottie Deane appeared. One, Bucky Smith, hated Billy. The party rested but Billy struck the trail. To save the murderer and his wife Billy must keep them out of Smith's hands. He would have to make them his own prisoners. The capture was easy. The party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

A false story of Jim Blake's sent Pelletier on a search which ended abruptly when he found a baby, Little Mystery, in a nearby igloo. After MacVeigh's return, Eskimos came for the child and to save her the men fled. In flight they met Scottie Deane, father of the child. Next day, after the death of Deane, MacVeigh struck south taking Little Mystery to Pierre Croisset's cabin where Isobel awaited her husband. Sick with smallpox she blamed Billy with her husband's death and in fear of "the plague" Pierre and his wife deserted. Billy pursued the half-breeds, found the cabin of "Rookie" McTabb and McTabb returned with him to get Little Mystery. Indian Joe went after his mother to care for Isobel. In her delirium the sick woman thinks Billy her dead husband, David Deane. From a newspaper clipping found in the cabin, Billy learns the story of Isobel and Deane and of Isobel's home in Montreal.

(Continued from last week)

WITH Isobel's "Good night, David," following him to the door, Billy went into the outer room With a strange, broken cry he flung himself on the cot in which Croisset had slept.

It was an hour before he raised his face from the blankets. Yet he had not slept. In that hour, and in the half-hour that had preceded it in Isobel's room, there had come lines into his face which made him look older.

Grief-stricken, he rose and faced the door. In spite of the fact that he knew there was no alternative for him, he regarded himself as worse than a thief. He was taking an advantage of her which filled him with a repugnance for himself, and he prayed for the hour when sanity would return to her tho it brought back the heart-break and despair that were now lost in the oblivion of her fever.

Always in the northland there is somewhere the dread trail of le mort rouge—the red death—and he was well acquainted with the course it would have to run. He believed that the fever had stricken Isobel the third or fourth day before, and there would follow three or four days more in which she would not be herself.

He listened for a moment at the door. Isobel was resting quietly, and he went out of the cabin without making a sound. The night had grown blacker and gloomier. A wind had risen from out of the north and east, just enough of a wind to set the tree-tops moaning and fill the closed-in world about him with uneasy sound. He walked toward the tent where little Isobel had been and there was something in the air that choked him. He wished that he had not sent all of the dogs with McTabb. A terrible loneliness oppressed him. He shuddered, for with the night wind it seemed to him that there came again the presence of Scottie Deane. He gripped his hands and stared out into a pit of blackness.

In a moment or two the feeling of that presence seemed to lift the smothering weight from his heart. He knew that Deane could understand, and the presence comforted him. He went to the tent and looked in, tho there was nothing to see.

And then he turned back to the cabin. From the rubber pouch he brought forth his pad of paper and a pencil.

For more than an hour after that he worked steadily in the dull glow of the lamp. He knew that Isobel would return to Deane. It might be soon—or a long time from now. But she would go. And step by step he mapped out for her the trail that led to the little cabin on the edge of the barren. And after that he wrote in his big, rough hand what was overflowing from his heart.

"May God take care of you always. I would give my life to give you back his. I won't let his grave be lost. I will go back—some day—and plant blue flowers over it. I guess you will never know what I would do to give him back to you and make you happy."

He knew that he had not promised what he would fail to do. He would return to the lonely grave on the edge of the barren. He folded the pages of paper, wrapped them in a clean sheet, and wrote Isobel Deane's name on the outside. Then he placed the packet with the letters on the shelf over the table. He knew that she would find it with them.

WHAT happened during the week that followed that night no one but MacVeigh would ever know. To him they were seven days of a fight whose memory would remain with him until the end of time. Sleepless nights and almost sleepless days. A bitter struggle, almost without rest, with the horrible specter that ever hovered within the inner room. A struggle that drew his cheeks in and put deep lines in his face; a struggle during which Isobel's voice spoke tenderly and pleadingly with him in one hour and bitterly in the next.

The three days of torment lengthened into four, and the four into seven. To the bottom of his soul he suffered, for he understood what it all meant for him. On the third and the fifth and the seventh day he went over to McTabb's cabin, and Rookie came out and talked with him at a distance thru a birch-bark megaphone. On the seventh day there was still no news of Indian Joe and his mother. And on this day Billy played his last part as Deane.

He went into her room at noon with broth and toast and a dish of water, and after she had eaten a little he lifted her and made a prop of blankets at her back, so that he could brush out and braid her beautiful hair. It was lighter in the room, in spite of the curtain which he kept closely drawn.

When he was done he lowered her gently to her pillow. She was looking at him strangely. And then, with a shock that seemed to turn him cold to the depths of his soul, he saw what was in her eyes—sanity and reason. He saw swiftly gathering in them the old terror, the old grief—recognition of his true self! He waited to hear no word, but turned as he had done a hundred times before and left the room.

IN THE outer room he stood for a few silent minutes gathering strength for the ordeal that was near. The end was at hand—for him. He choked back his weakness, and after a time returned to the inner door. But now he did not go in as he had entered before. He knocked. It was the first time. And Isobel's voice bade him enter. His heart was filled with a sudden throbbing pain when he saw that she had turned so that she lay with her face turned away from him. He bent over her, and said softly:

"You are better. The danger is past."

"I am better, and—and—it is over?" he heard her whisper.

"Yes."

"The—the baby?"

"Is well—yes."

There was a moment's silence. The room seemed to tremble with it; then she said faintly:

"You have been alone?"

"Yes—alone—for seven days."

She turned her eyes upon him fully. He could see the glow of them in the faint light. It seemed to him that she was reading him to the depths of his soul, and that in this moment she knew! She knew that he had taken the part of David, and suddenly she turned her face away from him again with a strange, choking sob. He could feel her trembling. She seemed struggling for breath and strength, and he heard again the words, "You — you — you—"

"Yes, yes—I know—I understand," he said, and his heart choked him. "You must be quiet—now. I promised you that if you got well I would go. And—I will. No one will ever know. I will go."

"And you will never come to me again?" Her voice was terribly quiet and cold.

"Never," he said. "I swear that."

She had drawn away from him now until he could see nothing of her but the shimmer of her thick braid where it lay in a ray of light. But he could hear her sobbing breath. She scarcely knew when he left the room, he went so quietly. He closed her door after him, and this time he latched it. The outer door was open, and suddenly he heard that for which he had been waiting and listening—the short sharp yelping of dogs, and a human voice.

In three leaps he was out in the open. Half-way across the narrow clearing Indian Joe had halted with his team. One glance at the sledge showed Billy that Joe's mother had not failed him. A thin, wizened, little, old woman scrambled from a pile of bear-skins as he ran toward them. She had sunken eyes that watched his approach with a rat-like glitter, and her naked hands were so emaciated that they looked like claws; but, in spite of her unprepossessing appearance, Billy almost hugged her in his delight at their coming.

Maballa was her name, Rookie had told him, and she understood and could talk English better than her son. Billy told her of the condition in the cabin, and when he had finished she took a small pack from the sledge, cackled a few words to Indian Joe, and followed him without a moment's hesitation.

That she had no fear of the plague added to Billy's feeling of relief. As soon as she had taken off her hood and heavy blanket she went fearlessly into the inner room, and a moment later Billy heard her talking to Isobel.

It took him but a few moments to gather up the few things he possessed and put them in his pack. Then he went out and took down his tent. Indian Joe had already gone, and he followed in his trail. An hour later McTabb appeared at the door of his cabin, summoned by Billy's shout. He circled about and came up with the wind, until he stood within fifty paces of MacVeigh.

BILLY told him what he was going to do. He was going to Churchill and would leave Isobel and the baby in his care. From Fort Churchill he would send back an escort to take the woman and little Isobel down to civilization. He wanted fresh clothes—anything he could wear. Those he had on he would be compelled to burn. He suggested that he could get into one of Indian Joe's outfits, if he had any spare garments, and McTabb went back to the cabin, returning a few minutes later with an armful of clothes.

"Here's what you need," said McTabb, placing them in a pile on the snow. "I'll wait a little, while you're changing. Better burn those quick. The wind might change, and I don't want to be caught in a whiff of it."

He moved to a safe distance while Billy secured the clothes and went into the timber. When Billy reappeared he was arrayed in Indian Joe's second best buckskin trousers, a worn and tattered fur coat, a fisher-skin cap, and moccasins a size too small for him.

For fifteen minutes the two men talked, McTabb still drawing the dead-line at fifty paces. Then he went back and brought up Billy's dogs and sledge.

"I'd like to shake hands with you, Billy," he apologized, "but I guess it's best not to. I don't suppose—we'd dare—bring out the kid?"

"No," said Billy. "Good-bye, Mac. I'll see you—some time—later. Just go back—an' bring her to the door, will you? I don't want her to know I'm here, an' I'll take a look at her from the bush. She wouldn't understand, you know, if she knew I was here an' wouldn't come up an' see her."

He concealed himself among the spruce as McTabb went into the cabin. A moment later he reappeared. Isobel was in his arms, and Billy gulped back a sob. For an instant she turned her face his way, and he could see that she was pointing in his direction as Rookie talked to her. He wanted to cry out one word to her—at least one—but what came was only the sob he had fought to keep back.

HE TURNED his face into the forest. And this time he knew the parting was final.

The fourth night after he had left the plague-stricken cabin Billy was camped on Lame Otter Creek, one hundred and eighty miles from Fort Churchill, over on Hudson Bay. He had eaten his supper, and was smoking his pipe.

It was a clear and glorious night, with the sky afire with stars and a full moon. Several times Billy had stared at the moon. It was what the Indians called the Bleeding Moon—red as blood, with an uneven, dripping edge. It was the Indian superstition that it meant misfortune to those who did not keep it at their backs.

Billy had seen it only twice before. He was not superstitious, but tonight he was filled with a strange sensation of uneasiness. He laughed an unpleasant laugh as he stared into the crackling birch flames and wondered what new misfortune could come to him. And then, slowly, something seemed to come to him from out of the wonderful night, like a quieting hand, to still the pain in his broken heart. At last—once more—he was home. For the wind-swept barrens and the forests had been his home, and more than once he had told himself that life away from them would be impossible for him. More deeply than ever this thought came to him tonight.

He had become a part of them, and they a part of him. And as he looked up again at the red moon the sight of it no longer brought him uneasiness, but a strange sort of joy. For an hour he sat there, and the fire died down. About him the rustle and whisper of the wild closed in nearer. It was his world, and he breathed more deeply and listened. Lonely and sick at heart, he felt the life and sympathy and love of it creeping into him, grieving with him in his grief, warming him with its hope, pledging him again the eternal friendship of its trees, its mountains, and all of the wild that it held therein.

The trees and the rocks and the twisted shrub comforted him more and more in his loneliness and gave to him the presence of life in their movement, in the coming and going of their shadow-forms. Everywhere they were the same old friends, unvarying and changeless. The spruce-shadow of tonight, nodding to him in its silent way, was the same that nodded to him last night—a hundred nights ago; the stars were the same, the winds whispering to him in the tree-tops were the same—everything was as it was yesterday, years ago. He knew that in these things—and in these things alone—he would always possess Isobel. She would return to civilization, and the shifting scenes of life down there would soon make her forget him—almost.

But in his world there was no change. Ten years from now he might go over their old trail and still find the charred remains of the camp-fire he had built for her that night beside the barren. The wilderness would bear memory of her so long as he was a part of it; and now, as he came nearer to Churchill, he knew that he would always be a part of it.

Three weeks after he had left Croisset's cabin he came into Fort Churchill. A month had changed him so that the factor did not recognize him at first. The Inspector in charge stared at him twice, and then cried: "My God! Is it you, MacVeigh?"

To Pelletier alone, who was waiting for him, did Billy tell all that had happened down on the Little Beaver. There were several letters waiting for him at Churchill, and one of these told him that a silver property in which he was interested over at Cobalt had turned out well, and that his share in the sale was something over ten thousand dollars.

(To be continued next week)

"No, she licked him."—Tid-Bits.

It usually takes five years for a tree to produce nuts, but this isn't true of a family tree.—Detroit Free Press.

News and Notes

A NEWSPAPER, a soft drink manufacturer, a railroad company and an anonymous donor have each given several thousand dollars to the Georgia State College of Agriculture to start a national egg-laying contest in the state that is famous for its peaches.

* * *

One of the features of the Sesqui-Centennial is a full size reproduction of "High Street of 1776," which will show Market Street in Philadelphia as it was 150 years ago. Among the buildings will be Benjamin Franklin's printing shop, the homes of Stephen Girard, Robert Morris, and the famous belle, Peggy Shippen. Peggy Shippen married Benedict Arnold, then a dashing young officer in the Revolutionary Army.

* * *

The United States imported 73 million pounds of tomatoes in 1924. Most of the fresh ones came from Mexico, while Italy sent a large quantity of canned tomatoes. The tomato plant is a native of South America.

* * *

A man in Crawford County recently tried to butt into the bee's business. He made a mixture of glucose and sugar and sold it for honey. It didn't pass for honey with the chemists of the State Bureau of Foods and Chemistry, however. The man was prosecuted and fined $60 and costs.

* * *

It costs over $6000 to raise a child to the age of 18 years, according to a large life insurance company. The estimated average clothing bill for the whole 18 years is $912 for a boy and $1002 for a girl.

* * *

Not all red clover seed is red clover; at least it will not be after the first of September. On June 3 Secretary Jardine signed an order providing that after 90 days (about September 1) all clover seed grown in Italy and imported into the United States must be marked as a warning to American farmers that it is not adapted to use in this country. The order states that at least one-tenth of the seed in each bag imported must be dyed red.

* * *

Millions of hogs and cattle are given a "permanent wave" every year, altho they get it too late to enjoy their nice curly hair. The hair, which is a by-product of the large packing plants, is cleaned and sterilized, permanently curled into a miniature spring, and sold for use in the best mattresses, upholstered furniture, automobile seats, etc. The value of this hair adds several million dollars a year to the amount farmers receive for their livestock.

* * *

A succession of poor crop years, or a national famine, is bound to hit this country eventually, in the opinion of Sidney B. Haskell, director of the Massachusetts Agricultural Experiment Station. With the population of the United States increasing by 15,000,000 every ten years, Mr. Haskell doesn't think the farmers of the future will have any trouble selling their food products.

LEADCLAD

Leadclad Metal Shingles (5 designs) and Leadclad roofing, spouting and gutters, have the same heavy coating of lead as Leadclad Fence. Strong, light, easy to put on, last as long as the building. — Ask about them.

Coated With Everlasting Lead!

Leadclad Fences are coated seven times as heavy as the zinc coating on ordinary galvanized fences. And that coating is *pure lead*. That's why Leadclad Fences last so many times longer. Leadclad Fences, once up, are up for good. No more rusty fence. No more trouble and expense replacing every few years.

J. M. Berry says "Leadclad fence has lasted twice as long as any fence I ever used and is still good". You get longer wear and save money by buying Leadclad. It costs no more.

The Feed Your Livestock Need

Palmo Midds is Palm Oil from British Africa palm trees, plus high grade Middlings. Only two ingredients, but they mean fatter hogs in shorter time, fatter sheep, more high test milk, better conditioned horses, and a poultry feed that always produces splendid results.

PALMO MIDDS
"Better Feeding Results for Less Money"

This great twelve-year old feed runs low in moisture and high in solid feed value. Expert analysis proves Palmo Midds worth one-fifth more than wheat middlings. Yet it costs you less than middlings. The Palm Oil in a single sack of Palmo Midds is alone worth $1.75. But the Palm Oil costs you nothing and increases the feed value of the high grade Middlings used.

Palmo Midds is ideal as a full ration or with home grown grains. As a dairy feed it increases milk flow and produces higher butter fat content. Use Palmo Midds and you will make cheap pork. Fibre content low—digestible fat high. It is the lowest priced high class feed on the market. And thousands of feeders have proved it by experience.

Try it!

For liberal protein, high fat, low fibre and little moisture, try a few sacks of PalmoMidds. The results will surely surprise you. See your local dealer. If he cannot supply you, send us his name and we will arrange with him to get Palmo Midds to you.

Every Socket is a Servant

Suppose you had many servants to help you with your work. One to do the washing, another to do the ironing—one to sweep the carpets, another to run the separator and still another to pump the water. Wouldn't it be fine to have the uncomfortable summer jobs done better and quicker with half the work?

With a Fuller & Johnson Power and Light Plant every socket is a servant, and besides having power for the small motors—just press the button and a flood of clear, restful light makes everything bright as day.

A Fuller & Johnson Power and Light Plant will soon pay for itself. Let us send you pictures and complete descriptions.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I live near the beautiful place of Hershey. I get there real often. The strawberries will soon be ripe.

We went to Summerdale on Sunday and bought some peeps. We got over 200 White Wyandottes.

I planted snapdragons and asters which my aunt brought me. The potatoes are coming up slowly. If there would be more rain I think the things would grow much nicer. My father works at Quakertown, forty-six miles from Philadelphia and one hundred miles from Harrisburg.—Coletta Williams, thirteen (X), Dauphin County, Pa.

Dear Cousin Ruth and Forum Friends:—I help my mother work in the house. My father has a truck and a sedan. My brother has a touring. I like to ride in them.

My two brothers have bicycles. They go riding on them on Sunday.

My sister has many flower beds of all kinds. She likes them very much.

MARTIN AND HIS PET GOAT
Mary Guris, (X), Schuylkill Co., Pa.

My smaller sister and I also have one. We take great care of it.

We have a large lawn around our house. I like to cut it with the lawn mower. I cut it twice a week.

We have a washing machine and a butter churn which run by engine. I like to watch them working.

Here is a picture of my little brother with his pet goat in an oats field. His name is Martin.—Mary Guris, eleven (X), Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—Well, we are going to have a circus in our town June 2nd. A carnival just left last week.

Our peach trees, apple trees, and cherry trees have fruit on now. I wish you could be down here and help me eat some this summer. If you ever get down in Salem County, New Jersey, come and see me.

I have a garden to pull weeds out of and hoe. I have all kinds of vegetables in it. It's about a half acre. I have tried the Forum recipes and think they are all right.

It will soon be Memorial Day. We are going away. We have a park down here. It is open now. They have dancing every Wednesday and Friday nights and fireworks every Friday night.—Frances Wildermuth (X), Salem County, N. J.

Dear Cousin Ruth and Forum Friends:—You just ought to see my pet hen. Her feathers and comb are red. She lays an egg every day. In May she laid two eggs and my mother set them under a hen for three weeks. When three weeks were up two little chickens hatched out and I gave one of them to my sister and kept the other one myself. They are growing very fast now. Every day they go in the garden, potato patch, and in the yard. We feed them often each day. In the evening they go under the hen and I pen them up. In the morning I let them out and they run and fly around in the yard. I hope they grow up to be as nice and big as my pet hen.—Anna B. Syphard, eleven (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—I am setting a hen with duck eggs. It is my hen that I raised last year. Last year I set a hen and I got eight peepies. Everyone died except three. I raised the three and sold one chicken. I had a rooster and chicken. Something killed the rooster. Now I have the chicken and she is hatching.

Yesterday our school let out. We went for a hike. We had a good time. We played games. I water the cows morning and evening. I bed the horses and cows every evening.—Orval Kaufman, (X), Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—I started to kindergarten when I was four years old and first grade when I was six. We have twelve rooms and a playroom in our school building. We usually have 16 or 17 teachers, but on account of the coal mines being shut down we had only eight teachers. I neither missed nor was tardy during 1925-26 so I got a certificate from the county.

I have a very nice playmate, her name is Helen Poser. She is two weeks older than I. We go to the same school and are in the same class.—Catherine Morrow, (X), Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—We had a picnic the last day of school. We had a very happy time. The teachers brought lemons for lemonade, another brought sugar. Each one brought their own sandwiches and something else such as peanuts, oranges, oh! I can't tell you all we had.—Anna E. Wentz, (X), Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I have two dolls to play with. I live on a farm and I help my mother in every way I can. I like to go on the mountain and pick flowers and teaberries. We picked eight jars of teaberries for Christmas last summer.—Emma C. Herring, ten (X), Schuylkill County, Pa.

Dear Forum Friends:—We have recently bought a gasoline engine and a grain chopper. We have about 350 chickens.

The country here is level. Not far from my home is an electric pond where I often go fishing. We have no mountains in my county which is Caroline. We have a canary bird named Dick. When school is out I will have to help father on the farm.—Marion Shaffer, thirteen (X), Caroline County, Md.

Dear Cousin Ruth and Forum Friends:—I helped to cut potatoes for father. We cut sixteen bushels to plant. My little brother is just learning to walk and we have fun with him. He cannot talk very much yet but is learning gradually.

We have much fun riding down hill on the express wagon. We play many games when the neighbor children are here. We play mostly tag. On nice evenings a lot of children gather in a field close by and play together.—Emma King, eleven (X), Union County, Pa.

My dog is a Collie named Bobbie, and he is three years old. He can climb trees, and walk up a ladder. He has also killed seventeen rats.

You cannot keep him home when dad goes into the woods. He is always so glad when dad gets his ax that he jumps up and tries to lick him in the face.

BOBBIE CHASING SQUIRRELS
Esther A. Seaman, (X), Wayne Co., Pa.

He is a well trained dog and will not go with any of us unless we give him permission. He likes to be with the cows.

I am enclosing pictures of Bobbie after he climbed a tree chasing gray squirrels.—Esther A. Seaman, fourteen (X), Wayne County, Pa.

Dear Cousin Ruth:—We have five cows. I like to mind the cows. My brother and I are raising some chicks. We have seven of them. We have one dog, Trix. He is thirteen years old. He is as old as my oldest brother. We all like him.—Robert Chubb, nine (X), Snyder County, Pa.

Dear Cousin Ruth:—I have two dogs, Frisky, a Collie, and Dewey, a hound. Frisky is tan with white spots on his breast; he has a shield of pure white. Dewey is brown and white and has a shield of white.

Frisky took me to school and the teacher liked him and he sat on the seat like any dog would. I go get the mail and Frisky goes with me. The mail man always speaks kindly to him and pats him on the head.

I bought some seeds from school and planted them real early. They are getting along nicely and the vegetables are nice and the flower plants are nearly ready to be transplanted.—Ethel M. Gicker, nine (X), Berks County, Pa.

Dear Cousin Ruth:—This morning there were six bluebirds on our lawn for nearly an hour. I also watched two birds building their nest in a large butternut tree. I did not know what kind of birds they were. One bird would fly and get a piece of straw. The mate would perch on a post and wait. When they were ready they would fly back together to the place they were building their nest.

I have a large shepherd dog. He is a big fellow and very playful. He is a good cow dog. We have large Shorthorn cattle. We have a car, truck and tractor.

I am a regular farmer but I can cook, too. I am sending a recipe for chocolate fudge.

CHOCOLATE FUDGE

3 cups granulated sugar
2 tablespoons cocoa
Pinch of salt
⅛ tablespoon cream of tartar
¾ cup cream

Boil until it forms a firm ball in cold water. Then remove from fire. Allow to cool, stir until heavy and pour in buttered tins and cut in squares.—Myrtle Loomis (X), Bradford County, Pa.

Dear Forum Friends:—I have two pet cats, Tabby and Snookie. I like to gather wild flowers. We have a dog named Shep. I like to milk. When the paper comes I always read the Forum page first. I do not have any sisters but I have one brother.—Dorothy Smouse, ten, Bedford County, Pa.

Dear Cousin Ruth:—I received your membership pin and I thank you very much. I was glad to become a member of the Young People's Forum.

Our school was out yesteday. We had a picnic and races and programs. Another girl and I won the three-legged race. We got a prize for winning it.

I passed my grade and will be in the seventh grade next year.

The apple blossoms are out here and everything is pretty.—Marian C. Collins, (X), Venango County, Pa.

Will Frances Wildermuth, of Salem County, N. J., please send me her address so that I can mail her a Forum membership pin?

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Won't you have fun finding out what's for dinner today? Just re-arrange the letters in each word and, in less time than it would take you to help get the things on the table for mother, you will know what a good dinner this is. Just look at next to the last line—"PELAP EPI"—"pelap" becomes "apple" and "epi" certainly must be "pie"—now, don't you want to find the rest? When you have found the list of good things, send it to me on a POSTAL CARD so that it reaches me by June 26th—I'm sure I'll be hungry about that time. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures.

The Honor Prizes, popular size self-pronouncing Webster dictionaries, go to those Little Folks who send in correct, excellent answers to ten puzzles for ten straight weeks without missing,—one each week. Please remember that in order to win an Honor Prize your answers must be absolutely correct each week. Some of our Little Folks are very careless and make simple mistakes weekly.

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

The answer to the puzzle published in the May 29 issue of Pennsylvania Farmer is: JUST THINGS IN GENERAL.

The puzzle prize winners are: Cora F. Aucker, age 10, Selinsgrove, Pa.; Louise Berge, age 9, Lewisburg, Pa.; Lorene Dunn, age 10, Coudersport, Pa.; Helen Hillis, age 10, Armbrust, Pa.; Catherine Morrow, age 8, Eighty-four, Pa.; Norma Edna Patterson, age 10, New Castle, Pa.; Jennie Rambone, age 11, Newfield, N. J.; Rita Senior, age 8, Falls Creek, Pa.; Hilda Weaver, age 12, Windber, Pa.; Romaine Wood, age 8, Morris, Pa.

Girls' Dormitory at State

Pennsylvania Grangers Are Planning to "Give the Gift That Keeps on Giving."

IT IS planned to start building three dormitories at the Pennsylvania State College this summer. One, the girls' dormitory, we ought to be especially interested in for it is to be built by the Pennsylvania State Grange.

About three years ago when the trustees and faculty were planning to make a Greater State College, the Grange appointed a committee to go to State College, learn the thing most needed, and see where they could help. Many needs were suggested and seen but the one that impressed most was the limited opportunity for the girls who were getting an education there. So, the sugestion came from Mrs. Howard L. Vankirk, a member of the committee, "that the Grange build a memorial unto itself, thus showing its belief in education and that it take the form of a building where girls may have a home while studying."

Committee's Suggestion Adopted

It was an immense undertaking but when the committee reported the greatest need as they saw it, told of the many girls who wanted to enter but could not be received the Grange said "We will adopt the suggestion of your committee. We admit women to membership with the same requirements as men; so our daughters ought to have equal opportunity with our sons at State College.

"We believe, too, every girl should have a training in home-working—in care of children—with her training in the so-called 'cultural courses' and our state college is well equipped for this training—so we will build a dormitory."

The Home Economics Committee of the State Grange compiled a cook book, the profits of which are being applied to this fund and it can surely be classed among "the best sellers." The second edition of 5000 is half gone.

Said a squash to a turnip, one bright summer day,
"Let us hide for I see the cook coming this way,
A Pennsylvania Grange Cook Book is under her arm,
The look in her eye fills my heart with alarm."
"Foolish squash," said the turnip, why raise all this fuss?
Of course, she is coming, and coming for us,
Ere she cuts off my tops and my roots, I will pause
To say, if we die, it is in a good cause."

This Is Booster Month

About $30,000 is in hand, and the interest in the project is so fine, that it is felt a boost will make it possible to start the building at once So June has been made booster month and every Grange in the state will hold a festival; each member earn a dollar; or in some way increase the contributions to this Dormitory fund.—Dr. Hannah McK. Lyons.

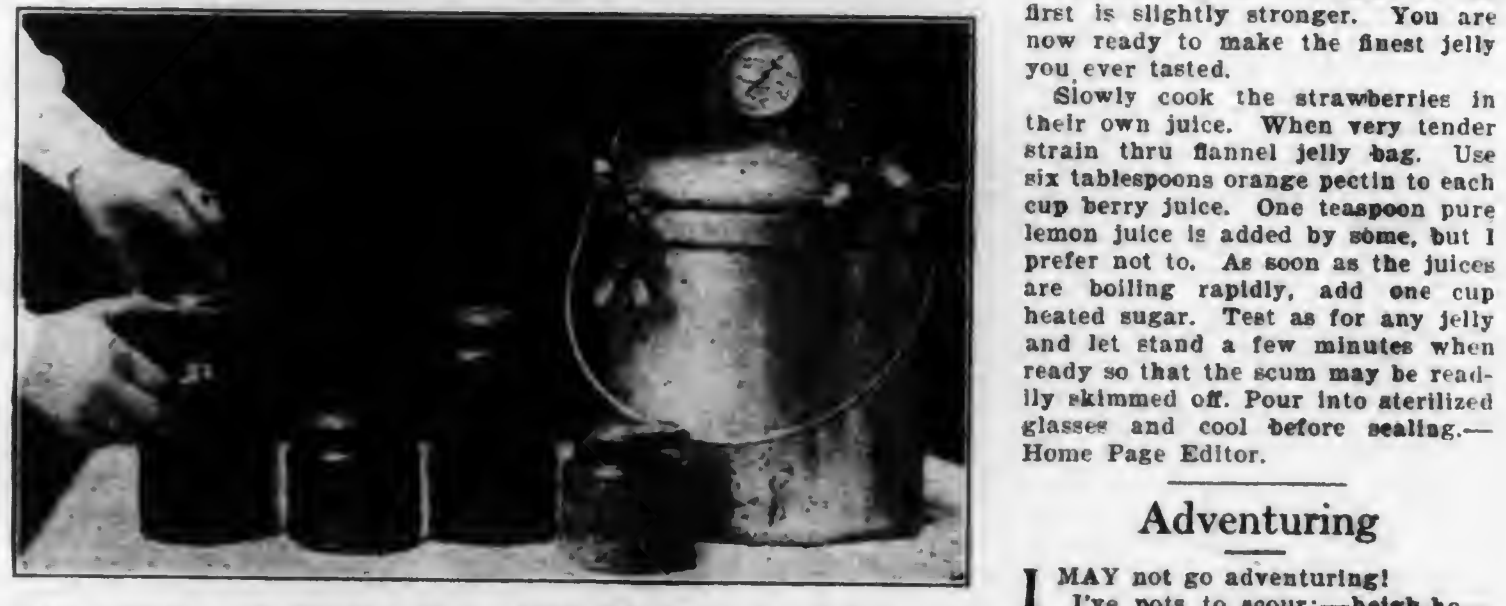
Editor's Note:—Over in Burlington County, New Jersey, we are running a vigorous campaign to raise funds to erect a hospital. The committee has adopted as its slogan, "Give the gift that keeps on giving."

You Pennsylvania Grangers are doing the same thing when you help to build the proposed dormitory for the young women of your state. Whatever you invest for the betterment of your young folks—for the education and comfort of your girls—you are giving toward the progress of civilization and the good of the mothers of the future.

Grangers everywhere are watching the fine spirit of the Keystone State in this noble undertaking. Let everyone share in the "Gift that keeps on giving" and help build the Memorial at State College.

Canning Under Pressure

IN RUSH times is when my pressure cooker comes in handiest. When fruit and vegetables are coming on faster than I can take care of them, the children bringing sweet corn in from the field faster than I can cut it off the cob.



Upon removal from pressure cooker lower wire clamp to complete seal. Jars with clamp tops should not be inverted but let cool first.

Working alone I can just about keep even with the pressure cooker I have. It processes four pints or else three quarts, while I am preparing that much to fill it again. Mine is a small family size cooker. It barely holds a sixteen-pound goose (which it can cook to perfection in 35 minutes), but it is easier to handle than the huge ones designed especially for canning. I bought it chiefly for everyday meals.

Fruits are processed 6 minutes at 5 pounds pressure, except pineapple and pears requiring 10 minutes. The pointer goes down to zero before opening the petcock, and this just about gives me time to pare, core, pack and cover with hot syrup, the next three or four jars.

Both Fruits and Vegetables

The pressure cooker is fine for fruits. The color, firmness and shape are well preserved, but it is especially valuable for vegetables and meats which are safer when processed at a higher temperature than is possible in the wash boiler. The government recommends the pressure cooker as the only safe way to can these non-acid foods, string beans, peas, corn, chicken and meat. Thirty minutes at 20 pounds pressure is the usual time.

After the cooker is heated thru, a very low fire maintains the correct pressure, and the cooker is set off the stove to cool when the time is up. There is only one cup of water in the bottom, which takes less time to heat than a whole canner full of water.

The usual rule is to allow one-third the customary time of cooking, counting time when pressure reaches 20 pounds. Thus my baked beans and tough roast require 25 minutes at 20 pounds. About one-third the usual fuel is required for processing, tho that is hard to figure, because the wash boiler has larger capacity, but requires a much hotter fire.

The pressure cooker is simple and easy to use.—Doris W. McCray, Iowa.

Timely Beauty Hints

AN IDEAL cold cream for summer use can be made each morning. Put two teaspoons of your favorite cold cream in the bottom of an empty cream jar, that has been thoroly cleaned. Add one teaspoon sweet top cream from the morning's supply, and one teaspoon lemon juice. Blend thoroly and use both as a cold cream and a base for powder.

* * *

No better face bleach for the removal of sunburn can be made than one of borax and lemon. In a cold cream jar put one teaspoon granulated sugar, one teaspoon borax and one teaspoon lemon juice. Blend thoroly and thin to consistency of thick cream with a little more lemon juice if necessary. Let stand twenty-four hours, spread over the face at night and wash off with warm water the following morning.—Lalla M. Thornton, N. Y.

When Eggs Are Cheap

DARK ANGEL CAKE

2-3 cup cake flour
1-3 cup cocoa
1¼ cup sugar—sifted
Pinch of salt
1 teaspoon cream of tartar
1 teaspoon vanilla or almond
1 cup overflowing with egg whites

Add salt to egg whites and beat to a foam. Add cream of tartar and beat till fluffy. Add sugar a spoonful at a time and continue beating. Sift the flour and cocoa together five times. After adding the flavor, fold in the flour. Bake in angel cake pan ungreased for about 45 to 50 minutes.—Mrs. D. W. Miller, Pa.

STRAWBERRY JELLY

Add Orange Pectin to Fruit Juice to Make It Jell

DEAR Editor: At Christmas dinner I tasted the finest jelly I ever ate. It was marked "Pure Strawberry," and had been bought at a roadside market. Have you any help to offer in making strawberries jell? I have no success with them and am very anxious. Please print on our Page how it can be done. Thank you.—A. T. F., Pa.

The strawberry lacks pectin and it must be supplied. The finest source I know of is the orange, for it will not change the delicious flavor of the strawberry.

Carefully peel away the outer colored skin of the orange, and use only the tough inner section of white fiber or pulp. Chop or grind using the medium blade of the meat grinder. Use one quart water to each cup of prepared pulp. Cover and let stand for two or more hours, then cook very rapidly until the liquid has reduced one-half. Strain thru woolen cloth. Use the same pulp for another boiling. You may then combine the two pints as the first is slightly stronger. You are now ready to make the finest jelly you ever tasted.

Slowly cook the strawberries in their own juice. When very tender strain thru flannel jelly bag. Use six tablespoons orange pectin to each cup berry juice. One teaspoon pure lemon juice is added by some, but I prefer not to. As soon as the juices are boiling rapidly, add one cup heated sugar. Test as for any jelly and let stand a few minutes when ready so that the scum may be readily skimmed off. Pour into sterilized glasses and cool before sealing.—Home Page Editor.

Adventuring

I MAY not go adventuring!
I've pots to scour;—heigh-ho—
This tumbled center of the earth
To poke in order. So!

But Spring comes tapping on the pane
And calls, "The robin sings.
Come see the orchard where they nest
To love blue eggs to wings."

Dear Summer bounds my kitchen thru—
Tan spattered on his nose—
With breathless tales of mountain trails
Where spotted fawns repose.

Brown Autumn pulls my apron strings
To show her canvas spread
Whereon she splashes fervently
Her russets, golds, and red.

Wild Winter, imp of make-believe,
Who twits old blood and slow,
Weaves diamond garlands for my trees,
Carves palaces in snow.
I may not go adventuring!
I've pots to scour;—heigh-ho—
This tumbled center of the earth
To poke in order. So!—Nora Del Smith Gumble, Pa.

Gather milk weed tips while very young and tender. Cook them as you would asparagus and eat them with a bit of vinegar. They are delicious.—Mrs. E. A. Kern, Pa.

Around the Family Table

Make Meal Time a Happy Time for Everyone

MEALS are necessary and important for good health and efficiency. Most families are together and at leisure only at meal times, so it is the duty of every one who draws up to the home table, to be agreeable, cheerful, and harmonious.

Good digestion, it has been clearly proved, largely depends upon a pleasant frame of mind while food is being eaten and digested. If friction develops, the brakes are put upon the digestive processes, and otherwise nourishing food may become a menace to the one who has eaten it.

Meal time should never be used as an occasion for settling family troubles or arguments, nor for reprimanding children.

The habit of sitting down to a table upon which some of the silver or food is lacking, is a bad habit to form. It is better to look everything over before the family gathers, than to have to call for extra supplies or leave the table to get them.

Correct Children Between Meals

If there are younger members in the family, it is much better to make suggestions and corrections between meals. Lapses of conduct at the table which demand immediate attention, can best be handled by sending the child away and requiring it to eat alone or to wait until the rest of the family have had their meal in peace.

The dining room should always be as comfortable as possible. Have it reasonably warm in winter and cool, orderly, and attractive in summer. A delightfully cosy little breakfast nook can often be managed at a modest expense, and the steps saved will more than compensate for the extra outlay.

Many families combine their living room and dining room satisfactorily, perhaps placing a davenport table and Windsor chairs in one end of the living room, or using a breakfast set which harmonizes with the furniture of the living room. This corner can be used for the children or young people to read or study in the evening. The table can be used for games, or for a little cutting and sewing.

A few flowers on the table, fresh and fragrant, shining silver, dainty dishes and not too many of them, wholesome food, and cheerful conversation, all help the family to look forward to meal time and to coming home.—Emma Gary Wallace, N. Y.

Touch Up with Bronze

BRONZE powder mixed with a varnish prepared for the purpose will transform many a shabby gold or imitation gold home ornament.

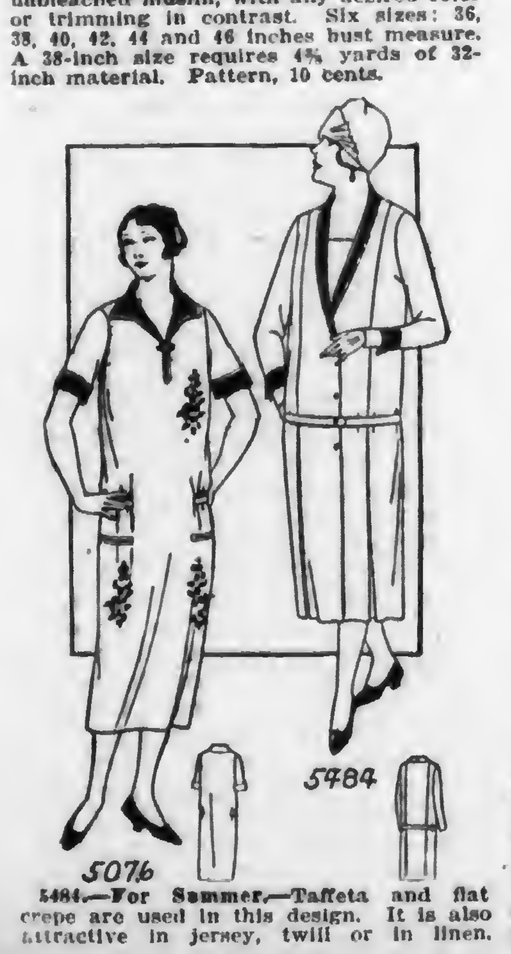
Begin with the salt and pepper shakers. They may be old, old ones—perhaps of aluminum. Treat them with a thin coat of dull gold bronzing powder and see the change. Touch up the living room lamp with the same dull gold. Freshen up the picture frames—some with dull blue, others copper and bronze, according to the color of the picture. An odd-shaped bottle, tumbler or bowl, may become a blue or gold vase of beauty.—Edith R. Dilts, N. J.

Editor's Note:—Readers interested in this scheme of redecorating and brightening up articles will be given addresses of dealers selling powders and varnish. Kindly send addressed, stamped envelope for reply. Send requests to Home Page Editor, care of Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

With Needle and Thread

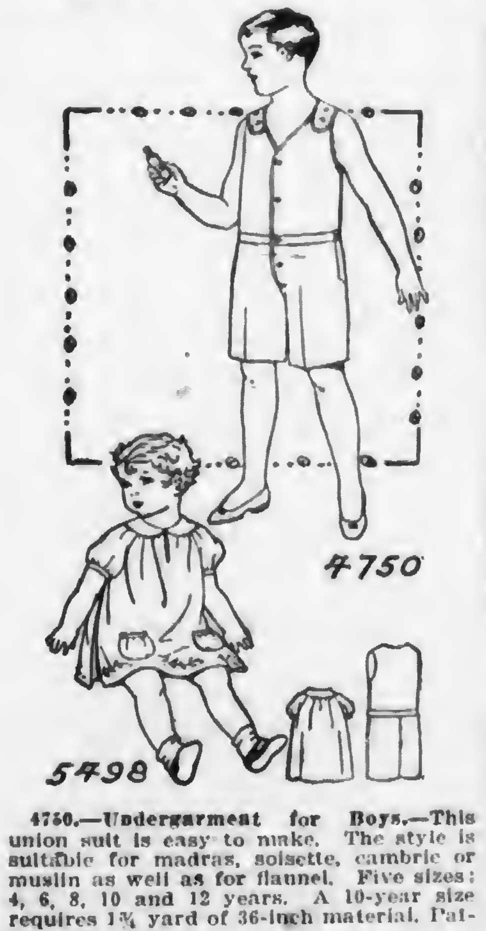
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5076.—A Pleasing Design.—White broadcloth with embroidery in black floss and facings of black satin is here shown. One could make this in cotton rep, or in unbleached muslin, with any desired color or trimming in contrast. Six sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4⅝ yards of 32-inch material. Pattern, 10 cents.



5484.—For Summer.—Taffeta and flat crepe are used in this design. It is also attractive in jersey, twill or in linen. Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size will require 4¼ yards of 54-inch material together with ⅜ yard of contrasting material for facings on collar and cuffs. Without cuffs ¼ yard is required. Pattern, 10 cents.

5498.—The Tiny Girl.—Dimity, voile, crepe or China silk may be used for this model. Five sizes: 1, 2, 3, 4 and 5 years. To make the dress for a 4-year size will require 2 yards of 40-inch material. Pattern, 10 cents.



4750.—Undergarment for Boys.—This union suit is easy to make. The style is suitable for madras, soisette, cambric or muslin as well as for flannel. Five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 1¾ yard of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

Long growing season in

DEL-MAR-VA
EASTERN SHORE ASSOCIATION
PENINSULA OF PLENTY

The Historic Eastern Shore

Don't miss taking the first few days you can get off to drive the family over to Del-Mar-Va Peninsula — between Chesapeake Bay and the Atlantic Ocean. A network of fine roads — the greatest number of miles of improved highway to area of country in America.

You'll see fine looking farming country and one of the greatest truck-growing districts in the United States. The mild winters and specially favorable climate permit Del-Mar-Va to market crops much earlier than localities in the same latitude elsewhere. Easily worked soils and a growing season of 185 to 210 days a year combine to make the Peninsula a region of remarkable productivity. The two Southernmost counties raise more early potatoes than any equal area in America, shipping to 38 states. The co-operative association serves 65% of the growers in that locality. Another county is the world's greatest tomato-canning county. Enormous yields of potatoes, sweet potatoes, melons, peaches, apples, berries, greens, etc., are produced throughout the Peninsula. In the northern counties you see general farming and fine dairy herds — these become less evident as you drive South. Herds can graze in pastures 12 months of the year.

The center of Del-Mar-Va is less than 250 miles from New York over level roads. Trucks make the round trip within 24 hours regularly. Del-Mar-Va products get top prices in markets that feed over 20 million people

Del-Mar-Va is a beautiful country, with splendid ocean beaches, great bays, broad rivers, and hundreds of streams. Famous for great fishing and duck-hunting Fine towns, cities, churches and schools — an inviting country for your family.

BARLEY, malting, c i f, domestic, 84¾@87¾c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with week ago: yearlings and medium weight fed steers, 15@25c higher; better grades of light yearlings up most; lightweight heifers sharing advance; heavy steers fluctuated, closed steady to weak; finished steers, all weights, working into stronger position. Extreme top heavies, $10.65; numerous loads of medium weights, $10.35@10.45; yearlings, $10.35; part load, $10.50; fat cows and heifers generally 25c higher; canners and cutters strong to 25c up; bulls, 35@50c higher; vealers, $1@1.50 lower.

Hogs—Bulk 240@325-lb butchers, $14@14.40; majority desirable 220-lb down, $14.65@14.75; practical top, $14.80; packing sows, largely $12.70@13; few sorted killing pigs around $14.90; shippers took 1000 head; estimated holdover, 7000 head; part held off market; heavyweight hogs, $13.70@14.50; light lights, $14@15; packing sows, $12.50@13.10; slaughter pigs, $14.50@15.

Sheep—Compared with week ago: Better grades of fat lambs, 75c@$1.25 lower; in-between kind, $1.25@1.50 lower; culls, $1.50@2 off; yearlings, $1@1.50 lower; fat sheep, 25@50c higher. Week's top prices: Fat western lambs, $19.20; natives, $18.75; feeding lambs, $14.50; fat yearling wethers, $16.50; fat ewes, $7.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 12, 1926.

Cloverseed, cash, domestic, $22; imported, $17.70; October, $20.75; December, $16.75 asked. Alsike, cash, $17. Timothyseed, cash, $3.50; September, $3.75.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 14th. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$31.00
Spring bran	30.50
Soft winter wheat bran	32.00
Hard winter wheat bran	31.00
Standard middlings	30.50
Soft winter wheat middlings.......	32.20
Flour middlings	34.50
Red dog flour	37.50
White hominy	31.70
Gluten feed	39.35
36 per cent cottonseed meal.........	37.00
41 per cent cottonseed meal.........	39.00
43 per cent cottonseed meal.......	41.00
34 per cent linseed meal	51.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

THE increasing supply of New Jersey strawberries was a feature of the Philadelphia fruit and vegetable market during the week ending June 12th. The season in Virginia came to a close and receipts were of very irregular quality. Delaware furnished the bulk of the best berries from the Eastern Shore districts. Jersey stock also showed a wide range in quality and condition and prices averaged about $3.50 to $4 per 32-quart crate, with exceptional lots up to $7, according to the Pennsylvania and Federal Bureau of Markets.

Pennsylvania and New Jersey cherries appeared on the market and met a fair demand. This stock sold at 60c per 4-quart basket, while Delaware cherries sold at $4 to $4.50 per 32-qt crate.

The cool weather resulted in light supplies of asparagus and the market was steady to firm. Delaware and Maryland stock was in very limited supply and the best Pennsylvania green grass brought top quotations. The market closed with this grass selling at $5.40 to $7 per dozen bunches.

Beets and carrots from New Jersey began to appear on the market and the demand was fairly active. Prices ranged from 4c to 6c per bunch. Lettuce was plentiful thruout the week and the market was dull and weak. Rhubarb and radishes were dull. Nearby peas showed a stronger tendency toward the close. New Jersey stock sold at $1.35 to $1.50 per ⅝ basket. Mushrooms held firm on the best stock and closed at 75c to $1.00 per 3-pound basket.—W. R. W.

Butter Markets

THE butter markets at the opening of the week ending June 12 ruled about steady with some indications of nervousness in certain quarters. As the week progressed dealers began to express more confidence in the general situation. The nervous undertone soon disappeared and by Wednesday prices had advanced slightly with the market tone on all markets reported as steady to firm.

Receipts of butter at the four markets during the week under review exceeded those of the previous week and those of the corresponding week last year by a very sizeable margin, but in spite of this the markets worked into a firm position. Since the consuming demand is far from large enough to absorb the receipts at this season and since speculation for short periods is not encouraged by the small price fluctuations there evidently was enough among the trade who considered prevailing prices a safe basis for storing butter.

This conviction was far from general, however, otherwise buying demand would have been too active to prevent prices from advancing more sharply than has been the case during the current week. In fact, earlier in the month a large portion of the trade preferred to wait before storing, believing that lower prices would prevail later on.

As the month progressed, and the heavy receipts were absorbed without any material effect on the markets more and more of the buyers came into the markets to supply their needs in June butter for storage, thereby helping to keep prices on a more stable basis. Then, too, the buyers for immediate consumptive trade sensing the change in condition and tone of the situation began to operate more freely in an effort to replenish their depleted stocks.

County News and Comment

Armstrong County, Pa.—Still cold but all corn is up. Potatoes showing irregular stand. Rain has been very scarce since April 1 and wheat, rye, oats and pastures are making a poor showing. Hay will be short. Spring seeded clover not showing well. Orchard fruits give reasonable promise, except peaches, which made a light setting. Strawberry crop will be light. Garden and truck crops planted on well prepared soil doing well. Not much buckwheat will be seeded. First cutting of alfalfa will soon be made. All hay, straw and roughage cleaned up during long feeding period. Fresh cows in good demand tho butter prices are low. Not many eggs but price low. Early hatched chick losses heavy. May hatches doing better. Cattle at last turned to pasture. Most dairy herds and farm stock reduced to minimum. Spring littered pigs not plentiful and selling up to $15 per pair at eight weeks of age. Good fat hens bring 30@35c lb. Prices: Wheat, $1.60; rye, 90c; corn, shelled, $1; oats, 55c; buckwheat, for seed, $1.25; potatoes, old, $2@2.50; hay, $20@25 ton; straw, $12@14; eggs, 25@30c; good country butter, 40@45c; fresh cows, $60@125 each. No surplus horses, colts or sheep.—W. M. P., June 7.

Berks County, Pa.—Weather has been unfavorable for all crops. It was too cold and too dry. After a recent rain grass fields look green but plants too short for this time of year. Corn being cultivated for the first time with no replanting reported. Oats about three inches high, some fields look very poor due to heavy rain after seeding time which formed a crust that prevented oats from coming up. Some used smoothing harrow with good results. Wheat fields fair in some localities, some spotted, others thin, while a few look extra good. Some has started to head. All old wheat taken to market and bins fumigated. Corn from last year is sold shelled at 75c a bushel. Potatoes slow in coming. Spraying of apple trees is completed for the last time this season. Hay is sold at $20 a ton with no market for straw. Alfalfa fields look fair with prospects of three-quarter crop due to insufficient moisture at the proper time. Prices: wheat, $1.60; corn, 75c, shelled; oats, 50c; eggs, 30c; lard, 16c; dressed hogs, 15@17c.—W. N. M., June 4.

Chautauqua County, N. Y.—All vegetation delayed. Eggs, 27c; butter, 42c; potatoes about $1 bu. Early potatoes planted but very few up. A heavy frost last night and one the night before. Most people have some oats and potatoes in but very little else planted. Soil is very dry. Had a light shower today. It is still very cold.—E. M. A., June 8.

Clinton County, Pa.—Cold, dry weather during latter part of April and May. Frequent frosts but not much harm done. Had our first real rain on May 30th. Corn planting finished but a poor stand. Cut worms are doing considerable damage. Oats crop will be short. Hay will be shortest crop for many years. Pastures short. Wheat fields look spotted, very few good stands, only about half crop expected. Green and Logan Townships, the first to be tested for bovine T. B., have been completed, a total of 1574 head were tested with 59 reactors. Prospects for a large crop of apples, cherries, small fruits and berries. Old wheat all sold, some going at $1.50. An average acreage of potatoes planted. Some corn in hands of farmers who are holding for $1 bu. Early hatching of chicks a failure, many farmers buying incubator chicks and raising them with brooders. Spring pigs scarce and high in price.—W. C. W., June 7.

Frederick County, Md.—Weather has been cool and damp but not much rain. Grain looking good but needs rain as does grass. Old hay scarce and being eagerly sought for. Corn practically all planted but looking poor. A lot of complaint about cutworms doing serious damage to young crops, also ants and heartworms are taking a heavy toll. Farmers that had corn planted before heavy rain two weeks ago had to replant because the ground baked so hard. Fruit trees full and should make a good crop. Prices of most farm produce about normal. Spring chickens 45c; eggs, 30c. Hogs and pigs are extra high, good pigs at weaning time bringing $7 apiece. Steers still cheap with little sign of improvement.—R. J. W., June 7.

Gloucester County, N. J.—All crops backward because of cold weather. Acreage of most crops normal with possible exception of sweet potatoes. Loss on sweet potatoes heavy due to cutworms. Plants have been scarce. There is a big crown set of early tomatoes. The experiment station is conducting a new spray schedule in the Glassboro section to see if there isn't some way to control the codling moth. The Swedesboro section is being agitated to change method of packing tomatoes, both in pack and package. Late tomato plants scarce and hard to get. Some beds have been treated with nitrate of soda and these plants have been almost a total loss when set in fields. The use of transplanters for the late tomato crop is becoming general. Considerable interest has been aroused over a new check row attachment for these machines. One grower is using this attachment on a planting of seventy-five acres. It is doing fine work.—A. K., June 6.

Indiana County, Pa.—Cool rains of past two weeks have kept things from growing as they should. Corn rapidly turning yellow and looks lifeless. Oats doing fairly well, wheat holding its own. Prospects for fruit are very good. Grasses have been doing well considering the late start they got. Cow testing well under way in county with an association of 26 members. Feed situation of this spring will probably make some low testers. Price of good cows seems to be increasing. Pigs very high and scarce. One shipper paid as high as 18c for hogs. Hay very scarce and selling high. Eggs, 25c; butter, 40c; potatoes, $3 bu.; oats, 60c. Roads have nearly all been scraped and are in good shape.—H. A. N., June 7.

Juniata County, Pa.—Very unfavorable weather this spring for growing crops, dry and cool. Had several showers recently but still too cool for corn to make a good start. Cutworms doing a great deal of damage, some replanting has been done. Grass short and thin, very poor prospects for hay. Clover a total failure, some oats fields fairly good while others thin and spotted. Wheat is shooting head on short straw. A number of farmers have sown soy beans to help out with short hay crop. Indications point to a big crop of all kinds of fruit. Young chickens doing well, some broilers have been shipped to market. Markets: wheat, $1.60; corn, 75c; oats, 50c; hay, $30; eggs, 27c; butter, 58c.—C. B. L., June 7.

Monroe County, Pa.—This county was visited by one of the most destructive hail, rain, and wind storms known for a number of years. Many grain fields were partially destroyed; washouts were numerous and a number of oats and corn fields were so badly damaged they had to be replanted and resown. Frosts were noticed in many parts of the county June 2 and 3rd. Crops in general are fair but about two weeks late. Hay crop is the most promising. Commencement exercises were held during the past two weeks with large audiences. The new county superintendent, Prof. John H. Kunkle, of East Stroudsburg, was the principal speaker at most of the exercises. Cattle are high in price and very scarce. Corn, 85c; oats, 60c; potatoes, $3; veal, 13c.—G. E. S., June 7.

Passaic County, N. J.—The past month has been unseasonably cold and dry. Vegetation backward. Apple trees showing indications of a fair crop. Grape vines have been sprayed once and will be sprayed again as soon as the blossoms fall, but as yet they are not in blossom. Markets poor on some things while others selling fair. Spinach very poor, three bushels for $1 is top price. A large part is going back home. Local lettuce of rather poor quality and has poor sale. Asparagus going well. These prices and market conditions are for Patterson.—N. D., June 7.

Salem County, N. J.—White potatoes looking fine, even tho some fields a little uneven. Cool weather has been ideal for their growth. County has one of poorest hay crops in years. Pasture short. Dairymen had to turn out to pasture much earlier than usual owing to hay shortage and the using up of ensilage. Big acreage of late tomatoes being planted. Plants not as big as growers would like and work delayed. A normal acreage of seed potatoes will be planted, if seed can be secured. Asparagus prices have not been as satisfactory as growers would like. The weather has been too cold for it too grow. Bug damage has been worse than usual and cost of cutting excessive. There has been no alfalfa cut, even tho season is now ten days later than usual for first cutting.—E. M. B., June 10.

Tioga County, Pa.—Past month very cold and dry. There have been only very light rains and occasional showers. Within a few days frosts have damaged early vegetables and probably fruit to some extent. Several hundred acres were burned over by forest fires during May. Most fires were confined to small areas. Pastures and meadows very short for this time of year. Many farmers feeding their stock in the barns. Hay, scarce and high. Oats and corn planted, some potatoes still to plant. Farmers trying to plow for buckwheat finding ground very hard and dry. Many later chickens being hatched to take the place of poor early hatches. Later chicks doing nicely. Eggs, 28c; hay, $18 in the barn; potatoes, $2; young chickens, 42c.—P. W. L., June 8.

Prices and Prospects

(Continued from page 9)

offerings. At the close of the week extra firsts sold at 34c to 35c per dozen with gathered firsts to extra firsts bringing 33c to 36c.

The market in Philadelphia held steady toward the end of the week. Receipts totaled 41,925 cases, of which number Pennsylvania furnished 3268 cases. On June 9 firsts sold at 34c per dozen and firsts in second hand cases brought 30½c.

Liberal receipts of live poultry in New York caused a weak market at lower prices. The demand was good for the very few light fowls arriving. Broilers were in heavy supply and the demand was slow. During the early part of the week express broilers were scarce and wanted. White Leghorn fowl were dull and slow.—W. R. Whitacre.

OHIO ACCREDITED CHICKS QUALITY GUARANTEED APPROVED BY OHIO POULTRY IMPROVEMENT ASS'N
KNOX HATCHERY
BETTER CHICKS AT NO EXTRA COST
Every flock fully tested, inspected, culled and accredited. This means HIGH QUALITY and will mean much more profit to you than buying ordinary Chicks even at a lower price.

Swiss Weather Prophet
The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.
This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

Kirby Poultry Farm

Handle Eggs with Care or Whites Become Watery

WE ALL recognize the importance of handling strawberries, peaches and many other perishable crops with the greatest possible care, but with eggs the only thing given much consideration is that of preventing breakage. In some experimental work performed by the writer at the New Jersey Experiment Station, however, it was shown that the more an egg is handled the more watery the white becomes, due to the breaking down of the structure of that portion of the egg.

Eggs that appeared perfectly normal when candled were immediately subjected to handling by moving the case back and forth across the floor. After 100 such movings the eggs were recandled and 27 per cent were found to be watery. The eggs were then replaced in the case and moved 100 more times. A candling after this showed 58 per cent watery.

After 500 Movements

The operation was repeated again until a total of 500 movements had been accomplished with a candling after each 100 movements. The percentage of eggs that were watery increased in proportion to the amount of handling received and in the end 94 per cent were watery.

Eggs must, therefore, be "handled with care" if a good appearing product is to be placed upon the market. The eggs, after becoming more or less watery, may be just as suitable for human consumption as they were before, but the market price received for such eggs will be from 5 to 10 cents below top quotation because buyers insist upon a firm white, particularly in warm weather.—C. S. P.

Ration Got Results

MR. DUNN is one of the leading dairymen and poultry raisers of Connecticut. He has a farm of 135 acres and is one of the most successful farmers and feeders of his state. In March, Mr. Dunn finished feeding twenty cockerels for two months in a special test. When dressed—picked and drawn—these twenty cockerels weighed 137 pounds, or an average of nearly seven pounds each.

These birds were fed the following ration:

Corn gluten feed	300 lbs.
Corn meal	100 lbs.
Ground oats	75 lbs.
Wheat middlings	200 lbs.
Linseed meal	100 lbs.
Beef scrap	100 lbs.
Fine table salt	5 lbs.

Two or three times per week Mr. Dunn made a batter of this mash and let the cockerels have a good meal of it. He also kept the mash before them in dry form in a large self-feeder with drinking fountains filled with fresh water. He kept them confined in a house without roosts so they were compelled to lie on the floor at night.

The dealer who bought these cockerels found that their total dressed weight was greater than that of forty-seven other dressed fowls which represented the usual market variety.

Bread for Turkeys

Please send me a recipe for corn meal bread for turkeys that would make two large loaves of bread at a time.—J. G., Warren County, N. J.

A mixture of 3 parts corn meal and 1 part wheat bran can be baked quite hard and then crumbled for feeding young turkeys. About 6 cups of corn meal and 2 cups of wheat bran mixed into a stiff batter with water or milk will make two loaves of the corn-bread.—R. G. Kirby.

Joan—Mummy, was baby sent down from heaven?

Mother—Yes, dear.

Joan—They like to have it quiet up there, don't they?

The Voice of the People

What's Wrong with Farming—by a Farmer

TO THE EDITOR:—At the start of this letter I want to say that I am a farmer and make my living by farming; that I go to market three times a week and most of my observations have been made there.

Now, what I am going to say will probably raise a howl, but to my mind what the farming business needs to help it is honest men. I think there are more misrepresenting men in the farming business than in any other.

Take cooperative marketing, or market problems of any kind. One or two men putting up a dishonest package will soon put it out of business.

Here are some of the crooked things that the farmers have done. The pear growers in a certain section used a stove pipe to put the small pears in the center of the barrel. The tomato growers in another region have been trying to beat the buyers until the public will not buy their package unless there are no others to be had.

One time a section of New Jersey was noted for its melons. None are raised now. There are several reasons given. Blight is one, and I forget the others, but I think this is the reason. The man who got his melons to New York first received a big price. Therefore, all of them were picked before they were ripe, and very nearly everything went into the barrel of primes. When Rocky Fords came along, put up in honest packages, the buyers bought the good package and left the poor one.

Stop and consider how long the storekeeper or the manufacturer would last if the article sold was not as it should be. If an automobile manufacturer sold a nice coat of paint and an engine that would not run how long would he stay in business? Also, any factory which did not have any seconds, but mixed them all in their firsts, how long would they last?—N. D., Passaic County, N. J.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOG HAS SORE EYES.—I have a very valuable male dog, not quite a year old, that has sore eyes. There is always matter running out of them and the light hurts his eyes. He was that way when I got him. I am sure it is not a cold. He eats well and likes to run coon. Could you tell me something to do for him?—E. L. B., Coraopolis, Pa. Bathe the eyes daily with warm boric acid solution. With a medicine dropper put into each eye daily one to two drops of a ten per cent solution of argyrol.

PIGS ARE DYING.—We have a pen of ten shoats that have been on a clover and timothy and oats pasture. They also have been getting some corn on the ear, middlings and pig meal. They have creek water before them at all times, no milk. They have lost their appetites and have no control of their hind parts. They lie around a few days and die.—D. G. K., Berwick, Pa. With losses such as you are experiencing you should consult your nearest graduate veterinarian. The losses may be due to parasites and these may be eliminated by the use of worm capsules. Such capsules may be secured from your veterinarian. The presence of cholera should be definitely determined as the use of capsules would result in losses if the pigs had cholera.

COW FAILS TO GIVE USUAL AMOUNT OF MILK.—We have a Holstein about ten years old that always has given plenty of good rich milk until this spring. Now she gives only two or three pints a day and it is thick after standing and of pale pinkish color.—H. F., Dalton, Pa. Try bathing the udder with warm water, massaging the udder carefully to stimulate circulation. This cow may have an inflammation which gives to the milk a pink color. After following the instructions given it would be well to report the progress of this case.

Mushroom Growers

THE Italian mushroom growers around Kennett Square, the mushroom center of the world, have formed the Chester County Mushroom Growers' Association. The new association has been organized because few Italians are represented in the recently formed Mushroom Growers' Cooperative Association and because many of them do not understand English readily.

There are 348 Americans and 119 Italians who have commercial houses. Archie Ruggieri, president of the new organization, told me that 75 of the Italians are now members and that shortly all will join, for his people have already seen its value.

Since a saving of $7 a thousand is being made on the shipping baskets little complaint is being made to the $10 membership fee.—Thos. H. Wittkorn.

The resignation of Thomas P. Cooper, Chief of the Bureau of Agricultural Economics, U. S. Department of Agriculture, has been accepted by Secretary Jardine, to take effect June 10th. While in Washington Mr. Cooper has been on leave of absence from the University of Kentucky, to which he is now returning to resume his work as Dean of the College of Agriculture and Director of the Experiment Station of the University of Kentucky. L. S. Tenny, Assistant Chief, has been appointed Acting Chief of the Bureau.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

FARM LANDS

ILLINOIS THE LAND OF OPPORTUNITY—Henderson County is one of the best located counties in the State of Illinois. The Santa Fe and C. B. & Q. Railroads, which connect Chicago with the Pacific Coast, both pass through Henderson County. The Illinois Power & Light can furnish unlimited power for industry. You can buy five acres of Henderson County's rich soil for the price of a town lot. We are bounded on the west by the Mississippi River, and our soil is ideal for growing anything. Whether you wish to farm, be a merchant, or start industry, Henderson County is the place. E. G. Lewis, Media, Ill.

LOVELY MODEN FARM HOME—132 acres, 11 cows and young stock, bull, gas engine, saw rig, new ensilage cutter and carrier, cream separator, wagons, machinery, tools, etc., thrown in; broad level fields, 30-cow abundantly-watered pasture, 400 sugar maples, valuable woodlot, nice orchard; attractive big home, bath, running hot and cold water, 3 porches; 27-cow cement-basement barn, large silo, tool house, stable, etc. Woman owner's sacrifice price $4500, part cash. The **RIGHT** *Water System*
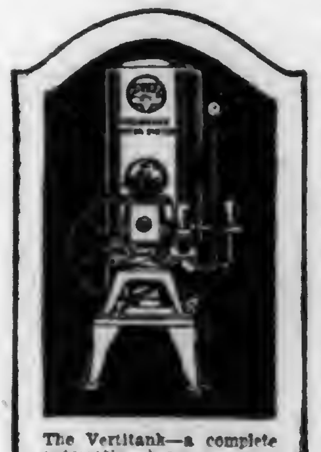
in the **RIGHT** *Place!*

With the *right water system* in the *right place*, satisfactory water service is assured. What is the right water system for your needs? Here is where Duro steps in and takes away all the uncertainties.

Duro specializes exclusively in water systems and water softeners. Whatever your requirements may be, Duro can meet them with the right water system and *guarantee you satisfactory water service*—or your money back.

Thousands of Duro systems are in daily use in suburban residences, village homes, farms, country estates, golf clubs, etc., automatically furnishing a constant supply of water under uniformly strong pressure from well or cistern.



The Vertitank—a complete automatic home water works. Strong pressure at every faucet. Price $115 f. o. b. factory. Other systems as low as $85.

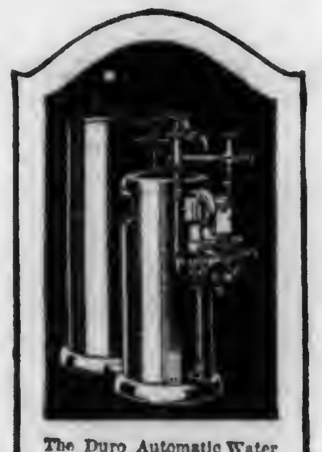
Duro Automatic Water Softeners are bringing the joy of soft water to old and new homes wherever the water is hard.

You can get expert advice from Duro Engineers entirely free and without obligation.

Write for *Free Consultation Blank.*

THE DURO COMPANY
1206 Monument Ave., Dayton, O

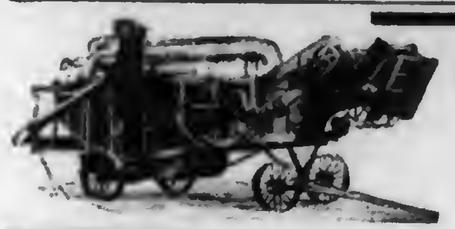
World's largest manufacturers of water systems and water softeners, Duro products are easily recognized by their distinctive grey enamel.



The Duro Automatic Water Softener obsoletes all old-style hand operated types. Constant supply. Priced as low as $195 f. o. b. factory.

DURO **Pressure Water Systems**
and Automatic Water Softeners

Duro Guarantees Satisfactory Water Service



FARQUHAR THRESHERS

Do fast, Clean Threshing. Now is the time to plan for the busy threshing season. Farquhar Threshers are designed and constructed in full accord with the best experience of thousands of threshermen who have made money operating a threshing rig. With this thresher you too can make good money. Built in eight sizes.

Send for catalogs of Threshers and Engines and determine for yourself which will meet the needs in your community.

May be equipped with straw bruising attachment

A. B. FARQUHAR CO., Limited, Box 546, York, Pa.

Just what the
Farmer Wanted

HERE it is—a comprehensive tire choice created distinctly for the farmer.

The sole object: *to save you money!*

Every Goodrich division has collaborated—research, finance, production and distribution.

First, we lowered factory expenses and production costs by eliminating the manufacture of all classes of pneumatic tires except cords—and passed the savings on to you in lower prices!

Next, we built four distinct types of super-strong, super-wearing cord tires, each for a specific class of transportation service.

Then, we established four different price levels on the Goodrich Super-Strong Four, enabling you to ride on Goodrich Quality at a price that you can easily pay.

Now the net result to you is precisely this: A longer-running, more dependable tire at a price *less* than you have been accustomed to paying for standard quality.

If you are set on cutting down expenses, you'll ride on Goodrich!

Protected and Oiled Like the Motor in Your Car

Now you can get a farm engine with working parts just as completely protected against metal-cutting, trouble-making sand, dust and dirt as the motor in your car—an engine with a simple automatic oiling system that is just as effective in keeping the working parts well lubricated as the automobile motor. It's the

John Deere Farm Engine

The Enclosed Engine that Oils Itself

You can appreciate the extra years of better service the John Deere will give you, the fewer adjustments and fewer repairs that will be needed, because you know the value of fully protecting and thoroughly lubricating the working parts of an engine.

John Deere engines are built in 1-1/2-, 3- and 6-H. P. sizes. Can be furnished with portable truck.

Before you buy an engine make it a point to see the John Deere Type E. If your John Deere dealer can't supply you, write us.

THIS FREE BOOKLET tells you about the many other superior features in the John Deere Type E. Also, get free account book, "Bookkeeping on the Farm," by writing to John Deere, Moline, Ill., and asking for Booklets WR-536

HERE'S A REAL PUMPING OUTFIT

It's the John Deere Type E Engine and the John Deere Enclosed pump jack. Compact, simple—no gears or belts for the stock to get into. Worm-and gear-drive on jack, fully enclosed and operates in oil. Pump jack sold separately for use with belt.

Leader in Poultry Industry

Pennsylvania Ranks among First Five in Country

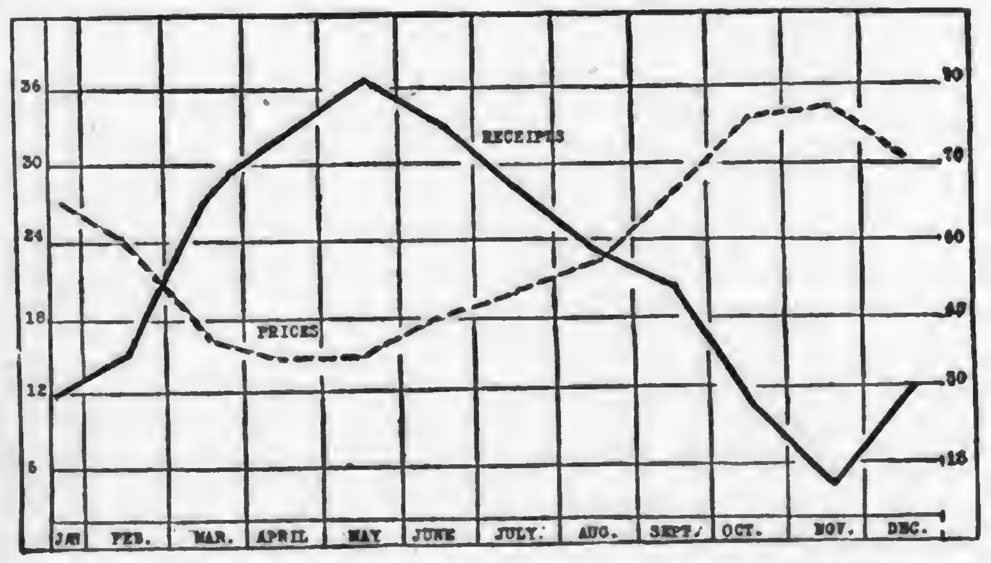
PENNSYLVANIA has been one of the leaders in the poultry industry since the days before the Civil War. Today the state ranks among the first five in the country. Not only does she ship her poultry and eggs to the larger markets such as New York, Philadelphia and Pittsburgh, but the Pennsylvania hen also supplies hundreds of smaller local markets.

During 1925, Pennsylvania furnished Philadelphia with approximately 134,000 cases of eggs, or eight and one-half per cent of all received. A larger number were shipped to New York but on account of the much heavier receipts at this point, the percentage was lower. A total of 244,000 cases was supplied or a little over three per cent of the total.

The chief source of supply for both New York and Philadelphia is the state of Illinois. This state sends twice as many eggs to Philadelphia as does Pennsylvania and five times as many to New York as does the Keystone State. Due to the fact that so many eggs are placed in storage at Chicago, it is probable that quite a number of the Illinois eggs were not originally from this state.

With the exception of Bradford and Crawford Counties in the north of Pennsylvania, the principal poultry producing sections are in the southeastern part of the state and relatively nearer to Philadelphia than New York. It would seem reasonable for growers in this section to ship to Philadelphia but there were 110,000 fewer cases received in Philadelphia than in New York. There are several reasons for this. The main commercial egg producing sections are specializing in white eggs. New York will pay a premium of 5c to 10c per dozen while Philadelphia likes brown eggs equally as well as white.—W. R. W.

Farmers using paper plant protectors have been able to set out tomato plants two or three weeks earlier than usual in Forest County, without frost damage. In one garden beans under the protectors were three inches high and well leaved, while others planted at the same time, but without the covers, were just breaking thru the ground.



Receipts of Pennsylvania eggs in thousands of cases in New York and prices on nearby white average extras top quotation during 1925.

Entirely Free from Blight

THERE are thousands of thrifty chestnut trees growing on Mont Alto mountain. But it is not the Mont Alto mountain that overlooks the State Forest School in Franklin County, Pennsylvania. Instead, it is one of the historic Alban mountains about 20 miles south of Rome, Italy.

Early on the morning of May 2, 1926, a small group of us started for these wonderful mountains. . . . We started from Rome on a suburban trolley, at first traveling thru a rich agricultural valley. Upon reaching the foothills, we observed that vineyards and olive groves occupied almost every square foot of productive soil. At the terminus of the trolley line we transferred to an incline railroad. This carried us to one of the most unique mountain villages of central Italy. Here the professors and doctors of the party cast aside their dignity and mounted miniature burros (without pedigrees or ethical standards) and continued their journey to the top of Mt. Carpo—the highest of the Alban mountains, with an elevation of 3150 feet.

Rome from the Mountain Top

From this commanding height we saw the eternal city of Rome spread in all her modern glory about the beautiful Tiber with the mighty dome of St. Peter's pointing towards the blue and sunny sky. Many historic shrines, and countless other historic objects, carried us back to the Latin tribes of ancient times. Not the least of these were the ancient aqueducts and the great Appian Way that lay before us like a gray ribbon spread out upon a gala garment of green.

There is no end to the interesting lessons in history within and about Rome. But to us foresters there came a picture on this trip that we will long remember. It was framed in history and consisted chiefly of extensive and thrifty stands of chestnut trees. . . .

The most striking observation of these chestnut stands is the fact that they are entirely free from the deadly chestnut blight. . . .

Products of the Chestnut

The material derived from the cutting operations is used chiefly in the nearby vineyards. Posts, poles, and stakes are in great demand. The branchwood is used for fuel and for pea brush and bean poles. A considerable quantity of charcoal is also made from chestnut.

Not the least interesting product of these chestnut forests is the nut crop. Annually enormous quantities of Italian chestnuts find their way to the American markets. Next year when the Italian chestnut merchant greets us on our city streets, we will do well to think of Mont Alto mountain as one of the chief sources of the big chestnuts that have taken the place of the small and sweet Pennsylvania chestnut which has no equal on the face of the earth.—Joseph S. Illick, in Penna. Dept. of Forests and Waters News Letter.

What about the Sesqui-Centennial?

Answers to Questions Concerning the International Exposition in Philadelphia

By C. L. WHITE

IS THE Sesqui-Centennial International Exposition in Philadelphia worth attending? If so, when will be the best time to go, what is there to see, and what will the trip cost?

Those are a few of the questions that have been coming from readers of Pennsylvania Farmer who are interested in Philadelphia's celebration of 150 years of American independence. We shall base our answers to those questions on the observations we have made on several visits to the Sesqui-Centennial grounds within the last few days.

It Will Be Great When Finished

The Exposition was officially opened on June 1st, but the installation of exhibits will not be entirely completed until about the first of August. There are thousands of interesting things to be seen now, but we advise those who must come a great distance to wait for at least a month.

The "Sesqui" is big in every way. It covers over 1000 acres of ground on the southern edge of Philadelphia. The Palace of Agriculture and Food Products, in which exhibits are now being installed, covers 8½ acres. The Liberal Arts and Manufacturing Building, in which many of the exhibits have been completed, covers 7½ acres. Several other buildings nearly as large will be ready to receive sightseers within a short time. About 50 million people are expected to pass thru the gates before the closing date, November 30th.

The Municipal Stadium is said to be the largest arena of its kind in the world. It seats 100,000 people and provides standing room for 100,000 more. In the Stadium many free spectacles are provided for Sesqui visitors. Floodlights turn night into day, and a system of radio amplifiers enables everyone to hear the voice of the one man who is making announcements, cracking jokes, or explaining what is going on in the great horseshoe. Exhibitions by star army regiments and fraternal organizations, airplane stunts, athletic contests, fireworks, etc., are already attracting thousands to the Stadium every day.

The Auditorium seats 20,000 people. It, too, has radio amplifiers so everyone can hear. A very large pipe organ helps entertain the crowds and daily concerts are being given by great bands and choruses. A series of 32 concerts is being given by the world famous Philadelphia Symphony Orchestra.

Can Visit Uncle Sam's Battleships

Sesqui visitors can inspect Uncle Sam's largest naval base, the League Island Navy Yard, which adjoins the Exposition grounds. In the Navy Yard are scores of destroyers, battleships and other units of our fleet, besides drydocks, great shops, and a naval aircraft factory (where the dirigible Shenandoah was built). The flagship used by Admiral Dewey in the battle of Manila Bay may be seen at close range, and visitors will be allowed to board some of the ships and to see airplanes catapulted into the air from the deck of a battleship.

Many foreign countries have completed or are now constructing special buildings to house their exhibits. The India building, patterned after the famed Taj Mahal is filled with interesting exhibits presided over by dark skinned natives of that populous country on the other side of the earth. As we write this, 75 Arabs have just arrived from Tunis, in northern Africa, to establish an Arabian village.

Several states are putting up buildings of their own. Of these the beautiful Pennsylvania Building is largest. In it are being installed exhibits depicting the greatness of the Keystone State that will be a revelation even to native Pennsylvanians.

An Immense Livestock Show Planned

An immense livestock show is planned for the week of September 12 to 19. Many large herds will be brought to the Sesqui direct from several of the country's famous state fairs. B. H. Heide, manager of the International Livestock Exposition at Chicago, will be in charge of the Sesqui show. W. H. Tomhave, livestock editor of Pennsylvania Farmer, will be superintendent of beef cattle. More than 200 carloads of stock are expected, including eight breeds of cattle, four of draft horses, 10 of sheep and five of swine. About $75,000 in prize money will be offered. A large poultry, pigeon and pet stock show is also planned.

The most interesting thing about the Exposition is the Exposition itself. Only a few weeks ago a large part of the grounds was nothing but swamp. The first building was started only five months ago. In the past few weeks scores of acres of low-lying land have been (to page 17)

The Radio Helps Get in the Hay

Up-to-the-Minute Weather Reports Are of Real Value in Harvest Season

RECENT surveys in various parts of the United States indicate that farmers view radio as the greatest boon to their home and business life since the coming of the automobile. Numerous ways are reported in which the radio has been made a business asset on the farm.

One woman tells how the radio weather report has been a money and time saver for both herself and her husband. Says she, "One day last summer I was listening in and the weather man said there would be showers. At noon I told my husband. He had hay down but it was not quite ready to take in. No rain was in sight but he shocked the hay in the afternoon. That night we had a heavy shower but the sun came out bright the next morning and the shocks soon dried off. As a result the hay was ready to take in before noon and it showed no evidence of being rained on.

Saved the Family Washing

"On another occasion, the weather man predicted showers for the next afternoon. I wanted to be sure to get my wash dry so we did the wash in the evening, hanging it out early in the morning and getting it dry before the rain came."

An enterprising farmer who lives along one of the main-traveled highways in western Pennsylvania, uses radio to entertain tourists who stop for the night. He has a fourteen-room house and advertised the radio entertainment as a feature to attract tourists.

Another enthusiastic farm supporter of the radio weather report says that by following the reports closely during the last harvesting season, he did not have a bit of grain or hay get wet. This saved not only much time, but a lot of worry.

Most farmers do not get their newspapers until the middle of the morning or later and therefore the published weather report is of little value because the work for the day is too far underway. On the other hand, the radio report, coming the evening before, gives plenty of time to plan work for the next day.

Lots of Snow on May 25th

This picture shows the home of Robert Johnson about two miles east of Tioga, Tioga County, Pa., as it appeared on the morning of May 25, 1925

Bought Three Sets

A farmer who employs a number of hired men reports that he has invested in three radio receiving sets and that much pleasure is derived from the radio by the hired help as well as his own family. This is one place, at least, where the business and the amusement side of the farm radio are very closely related.

Another enthusiast says the greatest benefit of radio to agriculture is its influence in keeping the young people, as well as the old, contented at home evenings. The fact that surveys reveal more than half of the farm radio sets are equipped with loud speakers indicates that radio is something for the entire family.

After all, the radio falls into a category very similar to the telephone and the automobile. It has possibilities in a business as well as an amusement way and the extent to which it is used for profit as well as pleasure will depend upon the individual farmer's own enterprise. Are you using your set to the best advantage?—George F. Johnson.

Vol. 93, No. 26 Phila., Pa., June 26, 1926 Whole No. 1519

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

George Eliot once said, "Ah! say I love you to those you love. The eternal silence is long enough to be silent in, and that awaits us all."

Class Arguments

PENNSYLVANIA FARMER has not, for various reasons, espoused editorially the principles contained in the proposed legislation known as farm relief bills. But we object to the chief argument made by Secretary of the Treasury Mellon the other day when he voiced his objections to the Haugen Bill in an open letter. He made the rise in price of food to consumers the leading reason why the bill should be defeated, and the daily papers used that opinion as headlines for the articles and as subjects for editorials.

Mr. Mellon and the editorial writers certainly know that there is a crying need for greater returns to the farmer if agriculture is to continue and prosper. But, seemingly at least, for economic and political reasons they will appeal to class feelings to defeat what they think is an impotent bill and thus make harder the work of equalizing commodity prices in this country. There are surely enough economic arguments which Secretary Mellon could have marshaled without setting up the cry of cheaper food. Such arguments tend to hasten the time when popular opinion in this country will, as it did in England a century ago, be willing to sacrifice agriculture for the benefits of other industries.

Campaign Expenses

WHATEVER the congressional investigating committee may decide about the propriety of the use of large sums of money in the recent Pennsylvania primary election, the fact remains that the primary is a costly institution, particularly in states of large population like our own.

In rural districts and small towns where each member of the election board knows nearly every voter by name there is comparatively little danger of fraud. But in cities like Philadelphia and Pittsburgh, where election officials are often members of the "gang," and where there are large numbers of voters in each district, the employment of watchers is often the only practical safeguard against corruption, ballot box stuffing, etc.

Then, too, campaign expenses are higher where there are more people. The candidate who spends $5000 in a state like Idaho or Utah is spending as much money per voter as the Pennsylvania candidate who spends $100,000.

Certainly it is a legitimate campaign expense for a candidate to write a letter to the voters, telling them what he stands for and why he thinks he should be elected. But it costs over $100,000 for postage alone to mail just one letter or circular by first class mail to every man and woman in Pennsylvania old enough to vote.

Because a candidate spends a large amount of money in a primary election, it does not necessarily follow that he has been guilty of buying votes.

Shall the Primary Go?

THERE is a growing demand in some quarters that the plan of nominating candidates for public office by the primary method shall be dropped and that we return to the old convention system. Senator David Reed, who will probably be up for re-nomination two years hence, has come out for dropping the primary election. Many others, laymen as well as professional politicians, are of the opinion that the convention method produces just as good results at a fraction of the cost. In fact, it has been asserted that a Republican convention in Pennsylvania would not have nominated William S. Vare for senator, while he was overwhelmingly elected in the late primary. It is believed by many that, in general, the active politicians exert as much influence toward getting what they want thru the primary as they did under the former plan of making nominations in conventions.

We present these as the arguments which are being put forth, not only in Pennsylvania, but in other states. The question will evidently come up in future legislatures and voters should prepare themselves with an opinion when the time comes to voice it. Theoretically, the primary election is in harmony with democratic government. Theoretically, it offers every voter an opportunity to express his or her personal choice in the selection of candidates. But practically it does not work out so. Where a strong organization exists, candidates are named and placed on the ticket and they are the only ones available at election time. The late primary election in Pennsylvania was more nearly a "free-for-all" than anything we have had recently, but it cost a mint of money and the results were,—well, not all that might be expected of "free born, intelligent American citizens."

Is There Vandalism?

Calm and Judicious Action by Farmers Will Prevent Malicious Mischief by Tourists.

WE HAVE heard from a few places that the usual summer practice of thieving and trespassing by tourists has begun this year. We do not know how general it is, nor to what extent it may develop before the season is over. Some people who drive out from towns and cities in automobiles seem to feel that it is their privilege to stop anywhere and take anything their fancy suggests. Others seem to think that any inviting location is a free camping site and that they may stop and eat lunch or camp for the night without the formality or courtesy of asking permission, making use of anything they can lay their hands on and leaving all manner of litter lying about the place when they leave. Some of this work is due to ignorance and thoughtlessness, but much of it is done by those who are arrogant and more or less malicious.

We do not wish to stir up unnecessary antagonism, but we do feel that farmers should not suffer loss and serious inconvenience by careless or dishonest tourists. The great majority of the tens of thousands who travel thru the country are well-bred, law-abiding people, and the common feeling of courtesy and goodwill should suggest fair treatment by farmers to travelers who deserve it. But the autoist who feels and acts as if everything growing or located on farm property is legitimate prey for his thieving fingers should be taught a lesson which he will not forget. Fortunately, Pennsylvania now has a strict law carrying severe penalties for appropriating or destroying growing things, and by enforcing this law fruit, vegetables, flowers, etc., are safeguarded against raids and molestation.

If we learn that this law is being violated in any general way, Pennsylvania Farmer will be glad to go into the matter, explain the law and aid in furnishing such means as will help protect property. First, we should be glad to learn whether or not there is sufficient vandalism being practiced to warrant making a drive in the matter. If so, write us and outline the kind of marauding being done. The present season will doubtless see the number of tourists on eastern highways greatly increased because of the Sesqui-Centennial in Philadelphia, and while Pennsylvania farmers are in sympathy with the exhibition and hope for its complete success, yet they do not desire to suffer loss and inconvenience because of the lawless class.

Editorial Sidelights

"WHAT is the best investment you have made recently?" asks the editor of the Home Page (Page 14). All of us have several things to invest,—money, time, energy. We are expecting this contest to bring letters from successful investors of all kinds.

It must not be supposed that the article about the Sesqui-Centennial (Page 3) mentions even more than a very small fraction of the things to be seen at the Exposition. It would take a large book to do it justice.

Going to the Sesqui is like taking a trip around the world. The most interesting thing about all travel is to see how other people spend their allotted time on earth.

A yellow-skinned Oriental may spend his life carving intricate designs on pieces of ivory no larger than one's little finger. The problem of imparting a certain delicate tint to a piece of glassware may absorb the productive years of another.

And the strange thing about it is that these artists and craftsmen of the Old World seem happier and more contented than the American who counts the day lost if he hasn't enjoyed a dozen pleasures of which the plodding worker across the sea has never even heard.

One of the hobbies of many students in agricultural colleges is the collecting of bulletins on subjects in which they are interested. These collections prove valuable in later years. A postal card request to any one of several government agencies will bring a valuable free bulletin on almost any farm subject. Our weekly announcement, "Yours for the Asking," is intended to enable readers to keep posted on publications of local interest (Page 8).

Pennsylvania has a good assortment of local fairs, as the latest annual county fair list shows (Page 19). But when is the Keystone State going to have a real state fair? An annual statewide farm exposition would make the city people and the legislators realize that this is a great agricultural state. It would be worth while if only for its effect on the non-agricultural population of the state.

Washington Letter

WANTED—A FARM POLICY.—The Senate debates on farm relief legislation have revealed the fact that a large group of senators fully recognize the need for a practical constructive and permanent national agricultural policy fostered and directed to a reasonable extent by the federal government. At present there is a lack of agreement as to the details of this policy. It is indicated, however, that this idea in time will develop and crystallize into a concrete governmental program.

AT THE PARTING OF THE WAYS.—Senator Arthur Capper declares that agriculture is standing today at the parting of the ways. Whether we shall develop and preserve a robust, virile farm population or whether our basic industry shall languish and wither depends upon the public policy adopted during the next ten years.

"Eighty years ago England faced the same question. At that time she decided on a policy that brought ruin to her agricultural production, completely changed the character of her agricultural population, and laid the basis for the hopeless economic condition which she now faces.

"Which pathway the United States shall choose is of far greater importance to our future as a nation than most of us realize. Sooner or later in the life of every nation arises the question: Shall we grow our own food supply or shall we buy it where we can get it the cheapest? Frequently this question translates itself into this form: Is the farmer to be considered merely as an instrument to supply the cheapest food to industrial workers or is he to be considered a major factor in the community with power to charge enough for his products to assure himself equal social advantages with his urban neighbor?"

HAUGEN BILL LOST.—Hope for the enactment of the Haugen bill was given up by its most ardent supporters when Secretary of the Treasury Mellon, in reply to several congressmen who sought his views on the equalization fee proposal, issued a statement in which he declared the Haugen bill would prove "neither workable nor beneficial." If the scheme worked practically, Secretary Mellon argued that the effect would be to boost the price of food to the American consumers, and at the same time contributing a subsidy to the foreign consumers who under the proposed plan will secure American commodities at prices below the American level. European labor could live more cheaply than American labor. Foreign manufacturing costs would be lowered and the foreign competitor assisted in underselling American products abroad and in our home market.

TREES ALONG HIGHWAYS.—The good roads appropriation bill has passed the Senate, providing ample funds for continuing highway construction in cooperation with the states for the next three years. An amendment offered by Senator Reed, of Pennsylvania, and adopted, provides for planting shade trees along the public highways. The bill appropriates $75,000,000 annually for general construction, and $7,500,000 annually for roads in the national forests and parks.

HALF RATE ON LOCAL PARCELS.—The Senate has passed the bill fixing postage at one-half the regular rates on farm products mailed directly from farm for delivery by rural routes. The bill provides that the rate of postage on farm products mailed from farm, garden, orchard or grove for delivery at the post office from which the route starts, or on such route, shall be one-half the regular rate otherwise applicable for service on the route. The provisions of this act expire on June 30, 1929, unless otherwise provided by law.

THE CHEESE COUNTRIES.—Six countries supply nine-tenths of the world's cheese. These countries are the Netherlands, New Zealand, Canada, Italy, Switzerland and France. The United States ranks third as an importer of cheese. Imports in 1925 amounted to 62,402,000 pounds, as compared with 59,176,000 pounds in 1924. The imported types are mainly not those made in the United States, and are consumed chiefly by former residents of foreign countries who prefer types to which they are accustomed.

MORE BUTTER IN STORAGE.—The production of butter and cheese appears to be gaining in the United States at a faster pace than demand, judging from the larger carry-over in storage. More than twice as much creamery butter was in cold storage in this country on June 1 as on the same date last year, according to the Department of Agriculture report.—E. E. Reynolds.

Harrisburg Letter

BIG JUMP IN FIVE YEARS.—According to some figures at the Capitol the farmers of Pennsylvania have increased the number of their motor trucks 191 per cent in five years. In other words, the number of such vehicles on farms has jumped from 10,250 in 1920 to 29,819 in 1925. There were 21,065 tractors on farms last year against less than 6900 five years ago, while automobiles owned on the farm have gone up from 104,850 to 159,974 in the same period. There has been an increase of over 30,000 in gas engines on farms in this state and there are 19,000 more silos than in 1920. One of the most marked advances in conveniences is in electric service, 26,246 farms being now equipped against 8495 in 1921.

It's some trick if he can keep it up.

CAUTION ON FORECASTS.—State agricultural authorities plan to issue in the next month the first forecast on the principal crops of Pennsylvania for this year and owing to the unusual character of weather prevailing the utmost care is being taken in assembling of estimates and data. According to what the officials say the changes are not going to be as marked in some lines as anticipated.

WARN ON HAY.—State fire protection officials have launched a systematic campaign of warning against the dangers involved in storing of green hay without precautions to note temperature. Results of the two years of observations and the investigation of barn fires are being made public. Some cutting of alfalfa is reported as under way in southern counties this week.

NOT CONFINED TO PEACHES.—State Plant Industry officials have called attention of owners of quince trees to the hitherto not generally recognized fact that the Oriental peach moth does not limit its depredations to peaches, but has developed a fondness for quinces. According to the reports here a number of well started crops were ruined by the moth in some southern districts last year. Bagging the fruit is being recommended.

GAME SEASONS. — Considerable letter writing is occurring over the changes in seasons made by the State Game Commission as the result of its study of conditions, demands for closing of counties to certain types of game and hunters' complaints. The commission will meet early in July.

WARN ON BRUSH FIRES.—State forestry authorities have been giving warnings, and in some cases making arrests, for fires getting out of hand as the result of brush burning. Traction engines not properly equipped with spark arrestors have been the cause of prosecution. Probably more arrests have been made this spring for forest fires than in any recent year.

USE EIGHTY PER CENT.—State agricultural authorities say that recent investigations have shown that the amount of the crops of Pennsylvania farms taken up in feeding livestock on farms is fully eighty per cent. Studies are now being made to determine the extent of livestock and poultry raising in districts where farming has not been found very profitable.

DOG RECORDS GO.—Just 6244 more dogs have been licensed in the first four months of 1926 than were tagged during the whole of 1925. The first official figures for this year's licensing have been counted up, showing 400,835 animals for which owners paid the license fees up to May 1st. Allegheny County again leads with over 20,000, followed by Westmoreland with 15,000, Luzerne with 16,000, and these counties in the 12,000 class: York, Washington, Montgomery, Fayette, Chester and Berks. Delaware is up in the 13,000 class.—Hamilton, Harrisburg.

New Jersey Letter

SUMMER FRUIT MEETING.—The New Jersey State Horticultural Society is scheduling its annual summer meeting on Locust Grove Farm at Westville, N. J., on August 10th. The program this year will include a discussion of some of the newer horticultural problems that have cropped up during the year. Specialists from the State College will call attention to the experiments on apple pollination and studies of peach tree growth conducted on the College Farms for several seasons.

BUMPER FRUIT PROSPECT.—The early June condition of apples and peaches in the state as reported by the Crop Reporting Bureau of the New Jersey State Department of Agriculture indicates a crop considerably in excess of last year. The estimates place the state production of peaches at 2,523,000 bushels as compared with 1,740,000 bushels last year. The apple yield is estimated at 3,217,000 bushels as compared with 2,845,000 bushels in 1925. The general condition of both crops is good despite the cool and varied weather conditions thruout the season.

STATE ROAD NOTES.—Opening of the bridge connecting Perth Amboy with Staten Island and so with Brooklyn and New York will shorten the time of trucking peaches, berries and various market garden crops to market. More farmers in central and eastern New Jersey will use the highways this year for speedy delivery of perishable crops. The new road map for 1926 issued by the State Highway Commission shows many new stretches of improved highways. The map also details the metropolitan area showing the most direct access to New York City markets. A new feature of the map this season is a panel showing by width of line the traffic volume along state routes.

SOMERSET STAGE COUNTY CONTEST.—Thirty-three communities in Somerset County have reported to date the registration of 979 boys and girls who will enter the county agricultural contest this year. This event, now in its sixth year, has been enthusiastically received and is viewed as one of the finest cooperative educational projects in the state. The County Board of Agriculture, Rural Y. M. C. A., School Board and other leading organizations are behind the movement.—B.

New York Letter

STRENGTH CONTESTS AT FAIRS.—Seven fairs in this state will this year use the horse dynamometer in pulling contests. It registers the pulling power of teams, and is mounted at the rear of a one-ton truck. It shows the load moved and illustrates the influence of such factors as weight, breed, age, type, and soundness, also kinds of fitting of harness and methods of training and driving. The competitive feature always calls a crowd.

PRODUCERS REVOLT.—The date of the proposed state-wide meeting of milk producers in Utica has been moved from June 22 to June 24th. An effort is being made to get an expression of opinion from individual producers as to the need of a state-wide cooperative organization. Leading producers are arranging to call the committee of eleven who recently refused to sanction cooperation, with three exceptions, before a state-wide group, to explain their actions and recommendations, which have not met the requests of the producers who called the committee into being.

FARMERS' COOPERATIVES THREATENED.—As a result of the investigation into sales of "bootleg" cream and milk in New York City three former city officials have been indicted. The findings of the grand jury, if carried out, would wreck every farmers' cooperative in the state. The investigation found no suggestion of graft or corruption on the part of the Dairymen's League. The grand jury evidently does not understand the situation, as it advises the extension of the New York milk shed, when already farmers are handicapped by surplus milk and are unable to make a fair profit because of this and the competition of bootleg milk that comes long distances and from unapproved sources.

FARM BOYS AND EDUCATION.—Recent studies by Uncle Sam show fewer agricultural college students than in 1914. This state in the ten years following lost 45 per cent of its young men taking agricultural training. The boys are taking courses that will fit them for other work. There is now a demand for youths in agriculture at salaries ranging from $2000 to $4000 that cannot fully be met.—M. G. Feint.

You Want This BOOKLET—FREE!
about
DEL-MAR-VA
EASTERN SHORE ASSOCIATION

It will pay you to look into the advantages of Del-Mar-Va—general farming, truck-garden, fruit, nursery, dairy, or poultry. This booklet gives you the interesting facts — costs you nothing.

No region in America has a *combination* like Del-Mar-Va's — low-priced land, early crops and big crops to the acre, best facilities for getting your product sold at top prices. Successful co-operative marketing associations. Close to the buying centers of 20 million people. Good roads and the services of motor-truck companies, railroads and boats. Soils and climate make it one of the most productive areas in America.

Del-Mar-Va leads all other sections East of the Mississippi in asparagus, string beans, limas, tomatoes, sweet potatoes, turnip greens, apples and peaches. The greatest melon-growing district and grows more strawberries for Atlantic Seaboard markets than do all other sections combined. Its apple tree district has more trees to the square mile than any other state in the Union. As to general farming, a certain man who still owns land in the wheat section of Illinois, raises more wheat to the acre in Del-Mar-Va, where he lives for the milder climate, and raises wheat, oats, rye, clover, alfalfa, and a big acreage of garden-truck.

Many a farmer has located in Del-Mar-Va from what he saw here on a chance pleasure trip. It will open your eyes too. But first get the Del-Mar-Va booklet. Then you will know what county interests you most and you can use your time best when you get here.

Del-Mar-Va has 6000 square miles between the Atlantic Ocean and Chesapeake Bay. Good roads, by putting profitable perishables in quick touch with the best markets in America, have headed Del-Mar-Va's farming business toward small farms. The main links in the fine system of improved roads are nearly finished. Already it has the highest ratio of improved roads to area of country to be found anywhere. The rest of America is just realizing that here is an exceptional region for profitable farming and raising a family — good schools, colleges, pleasant surroundings. You will never buy land again at the present price here. Therefore, fill out the coupon and mail it today.

Sample of Printing, Exact Size

50 Sheets
Writing Paper
25 Envelopes
to Match

Why not write to your friends on your own personal stationery? It lends style and dignity to your letters. Creates a favorable impression in writing to business houses. Let us send you 50 sheets of stationery and 25 envelopes, made of fine, smooth texture, water-marked Bond in the uniform size, so popular for personal use. Name and address is printed at top of Note Sheets and on flap of Envelopes in rich blue ink with Copper Plate Gothic type and the stationery is packed in an attractive, white covered, hand-made box. You should accept the following liberal offer. You will be greatly pleased with this package of personal stationery.

OUR OFFER Send us only $1.25 and we will extend your subscription to Pennsylvania Farmer for one year and send you by prepaid parcel post this lot of personal stationery with your name and address on letter heads and envelopes just as described. Please write name and address plainly, or print it.

Pennsylvania Farmer, 261 So. 3rd St., Philadelphia, Pa.

NESHAMINY GARDENS

Where an Editor Works and Thinks

By R. P. KESTER

THE two inches of rain following a rather dry period certainly boosted our strawberry crop. The plants blossomed profusely and set a lot of berries and the rain came just when it was most needed. The Premiers and the Big Joes began to ripen the fifth of June and have been coming along very rapidly. In twenty-five years of strawberry growing we have never before had such large berries. A visitor measured a representative "A Grade" berry the other day which was five and three-eighths inches in circumference one way and six and one-fourth inches the other way.

✦ ✦ ✦

STRAWBERRY prices have kept up pretty well this year. We have been selling the first grade at thirty cents per quart, retail, and seventy-five per cent of them are "Grade A" berries. The weather conditions have not been favorable for keeping the shipped-in berries in good condition and as a result many of those on the market have not been attractive nor of good flavor when they reach the consumer. The Aroma is even more heavily laden with fruit than other varieties, but they have only begun to ripen, being a week or ten days later than the others.

✦ ✦ ✦

IT IS sometimes hard to maintain our high appreciation of natural life in the form of birds, pheasants and other game which inhabit one's premises. Two or three ring-neck pheasants make Neshaminy Gardens their home thru the summer, raising their broods and leisurely strolling over the place. I have no doubt they eat many insects, thus aiding us in our battles, but they also like other things. For instance, they will take a generous bite out of the choicest strawberry and they seem to have no sense of economy, for they will pass to another berry after taking one bite. I examined the cucumber hills the other day and found that a pheasant had hooked every seed out of half the hills. I rather hope that the seeds have the same effect on that bird that green cucumbers have on some people.

✦ ✦ ✦

AGAIN we are confronted with the problem of harvesting a good crop of alfalfa. It is the fourth year this field has raised alfalfa, yet the growth stands waist high and very thick. The first mowing will be the tenth time for the seeding. Last year, even alfalfa hay was a drug on the market at harvest time but was in good demand later. The prospects are that the hay crop, aside from alfalfa, will be very short this year. From every quarter the report is that timothy and red clover are exceedingly short and it is too late now for them to catch up. We are not prepared to make hay and are not anxious for the job, but we shall try to have it made and properly stored.

✦ ✦ ✦

I BOUGHT a hand duster the other day, one that apparently will take care of a pretty good area rather easily. Dust for the control of insect pests is pretty generally accepted, but the authorities do not agree as to its merits for the control of plant diseases. Yet, private enterprise has done a lot of experimental and investigational work which is quite as carefully done as that of the experiment stations and they claim that as good results can be obtained by dusting as by spraying, at least in most instances. While the material for dusting a given area costs more than liquid spray, the ease of application and the low cost for labor seems to equalize the costs of the two methods.

✦ ✦ ✦

MOST people feel better when they can see the end from the beginning. It seems to hearten them. One of the boys who had been helping us at work on rows which are 1000 feet in length, and then went to a job where the rows are only 200 feet in length, said: "Now I can work with more enthusiasm." I thought over that afterward. It did not matter that there was as much to do where the short rows were. The fact that he could complete one in a short time and begin on another gave him encouragement. Are not grown people built the same way? We like to get thru quickly even if we must begin something else at once. Possibly this inclination is the explanation of the frequent changes so many people make in the course of a lifetime.

THE CHEERFUL PLOWMAN

Flowers and Home

A BUILDING set bleak on the plain by itself, or bare, if you please, on the hill's jutting shelf, that couldn't be home for me. That bleakness would haunt me by night and by day, that loneness, that drabness, that colorless gray, with never a flower to see, would rob me of sleep and would prey on my soul, would steal of my heart, and my hope, and my goal, would fill me with drearisome dread.

But, give me that building reared out on the plain, or aloft on that hill in Alaska or Maine with flowers that I've planted myself, with blossoms grown thick for the kiss of the bee, then that will be home and contentment for me—yes, home on the plain or the shelf! I long for the sight of the larkspur and stock, the dignified grace of the stiff hollyhock, the poppy's loose, devil-may-care, the baby-like face of the pansy, poor thing, the sunflower who struts with the pomp of a king, yet nods like a monk at his prayer; the candytuft, timid, the dahlia so bold, the red rose so warm, and the zinnia so cold, the daisy so friendly and free; the lily so fresh, and so girlish, and fair, petunia so gay,—yes, these all must be there, then life won't be dreary for me!

There must be the touch of the blue and the green, there must be the glint of the yellow bright sheen, there must be the fire of the red; there must be the hint of renewal and birth, the sign that a god is at work on the earth, that nothing is hopelessly dead!—J. Edw. Tufft.

CHEVROLET

Quality Features Typical of the Finest Truck Construction

- Easy gear shifting, with 3-speed control.
- Valve-in-head motor that delivers more power per gallon than any other truck engine of equal size.
- Positive motor lubrication by a combined pump and splash system.
- Positive cooling in all weather by a water pump and extra-large Harrison radiator.
- Positive, reliable, semi-reversible steering control.
- Extra-large, equalized brakes.
- Big, oversize rear axle with spiral cut, bevel gears.
- Chrome vanadium steel springs.
- Full-length deep channel steel frame, rigidly braced.
- Alemite lubrication.

These Quality Features found only in Chevrolet for $550 f.o.b. Flint Mich.

With its special truck-type construction — with numerous quality features found only on higher-priced trucks of equally modern design, the Chevrolet One-Ton Truck gives definite assurance of dependable haulage plus the vital advantages of low upkeep and slow depreciation.

No other truck is more ideally fitted for farm use. Its powerful valve-in-head motor pulls the load over the fields and rough roads easily, dependably and economically. Visit the nearest Chevrolet dealer and learn the importance of the quality features found only in Chevrolet at the Chevrolet price.

To Control Maggots

Can you tell me what to do for maggots on cabbage roots? —C. B. L., Crawford County, Pa.

The cabbage maggot has been unusually bad this season. This may be because of the dry spring. The most practical method for control seems to be to use corrosive sublimate. A solution of this will kill the eggs of the young maggots on the roots. One ounce should be dissolved in 8 gallons of water. You may dissolve the corrosive sublimate in a small amount of hot water and then dilute to the full 8 gallons. Have a pail of this solution handy at time plants are set in the field.

Pick up a handful of plants and give the roots a good dousing. If the plants are already set, take a cup and pour about one-half cupful of the solution around the stem of each plant. Three or four applications should follow at intervals of about 10 days. A watering can may be used to pour the solution around the plant.

Yours for the Asking

THE hoe, knife and wire method of digging out peach tree borers is not giving way to the paradichlorobenzene treatment. The white powder that bears this 19-letter name (Call it PDB for short.) gives off a deadly gas that sinks down thru the soil, enters the borers' tunnels and kills them on the spot. It isn't necessary even to dig the dirt away from the tree.

The Pennsylvania Department of Agriculture has published a bulletin telling just how to apply PDB. It may be obtained free by writing to the Department at Harrisburg, Pa., and asking for General Bulletin No. 418.

Cheese-Cloth Sometimes Practical

Where large numbers of plants are grown in hot-beds or cold frames some growers have found it practical to make a cheese-cloth frame which is put over the bed, thus keeping out the female fly which lays eggs on the stem of the plant.

Your patch of cabbage or cauliflower may seem to be in perfect growing condition. Soon, however, a few hot days come along or a dry spell occurs and the plants wilt badly in the middle of the day. Pull up a few and you will find the roots full of the tiny white maggots. The thing to do is to watch carefully all season and be ready to put the solution on when the maggots first appear. If they once get a good start they will completely ruin your whole field.

Corrosive sublimate can be purchased at the drug store. If you are too late to do any good this season make a special note to have some on hand ready to fight this insect next season.—W. T. T.

My Own Experience

TO THE EDITOR:—I have been looking over last week's Pennsylvania Farmer and was struck by the brief article by R. P. Kester, in the column "Where the Editor Works and Thinks."

He said, "We set several hundred cabbage and tomato plants a week before the rain came and most of them failed to start. Lack of moisture, wind and low temperatures made a combination which plant nature cannot survive."

I desire to give you my experience. Early in the spring at every odd spell I was forking up my garden which is near the house. I even came in contact with frozen ground. On the 23rd and 24th of April I set out 1000 Copenhagen cabbage plants. I had these plants shipped to me by parcel post from Georgia. At the present writing I never saw a finer patch of cabbage. I never lost a single plant by cut worms or any other insect. I have a stand which cannot be excelled. We had frost, lack of moisture, low temperature but these conditions have had no effect on my cabbages. I saw the advertisement of cabbage plants in Pennsylvania Farmer, and I have never regretted putting them out so early.—R. A. Burriss, Chautauqua County, N .Y.

Trespassers Keep Off!

NEW YORK STATE is engaged in a real farm bureau federation movement to prevent thefts on farms, especially those committed by thoughtless or evil-minded motor tourists. It is estimated that in 1925 such thefts must have amounted to more than a million dollars in this state alone. An effort is on foot to secure the posting of at least 25,000 vigilance signs by farm bureau members during the year. These signs are sold at a small profit and this money is used to pay the rewards for the conviction of violators. The purpose of all this is to create a reserve with which to meet necessary expenses incident to protecting farmers' property. Remarkable response has been given the movement by the city press of the state.

Simply trespassing on a farm is not punishable as is trespassing on a railroad or on village property. Here is where the law discriminates and needs amending. The amount of damage done by motorists is generally in proportion to the amount of cash crops grown and the extent of good roads provided.

Asparagus Schools

SCHOOLS are being conducted in California to accommodate children whose parents are employed in the asparagus industry. The school hours are regulated to suit the hours of the cutters. When the school started, classes were held in a tent but now more substantial structures have been erected. One school can be reached only by boat since it is on Bradford Island, where the fields are located.

These schools offer practically all the education many of these children will ever get, for during the rest of the year their parents are working in other states where the education of itinerants is not regarded as a state duty.—W. R. W.

Pear Tree Dying

My young Bartlett pear tree seems to be dying. It has been bearing about four years. The first year it bore heavily. Each succeeding year it bears less fruit of a poorer quality. The leaves are few and yellowish. I think the tree is hollow. Is there anything I can do for this tree? —P. K. W., Mercer County, Pa.

It is difficult to tell what is the matter with your Bartlett pear tree without seeing it, but I judge from the description that you give, that it is winter injury or severe sun scald.

The treatment will consist of cutting off the loose bark, covering the wound with grafting wax or with white lead paint, cutting back the top rather heavily next spring, and endeavoring to stimulate the tree to new growth and vigor by heavy applications of manure, or six to eight pounds of nitrate of soda, applied just as the young buds are bursting. —S. W. Fletcher.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

The Other Side of the Question

THE reason for scarcity of help on the farm is usually supposed to be low wages, long hours and loneliness.

It is often illuminating to get reasons first-hand from the workers. One man who has worked many years for farmers told me that a former employer asked him if he made anything by leaving him. The answer given was evasive. The hired man said he could have told him that he left because the farmer had "sour spells." Knowing the farmer to be a confirmed "grouch" I believed the statement.

A family drifted into our neighborhood a year ago. The man wanted to rent, or lease, or work a farm on shares, but he would not consider a farm on which the owner too would reside. No two men do their work alike and tho the results may be nearly identical each man prefers his method.

In our home a physician, deploring the difficulty of getting help in the house when people are ill, said it was because the hired girl was given an unpleasant room with an outlook on the backyard and little consideration for her comfort or pleasure was shown.

There are many farm homes that are real homes for helpers. Too often the place where a helper is employed is the only home he possesses. In a city, after a day's work is done, if surroundings are uncongenial, other surroundings and other associates can be found. In the country this is not always so easily done.

The farmer who makes his home a real home for the ones who give their time and strength to the tasks he requires of them is the farmer who attracts good workers.

It Works Both Ways

Often the "hired man" or "hired girl" becomes like one of the family and in such case the benefits are seldom one sided. We know workers that have been on the same farm for decades. They share in the family reunions, the anniversary celebrations, the giving and receiving of holiday gifts; they are loved and appreciated by grown-ups and children.

After all the old world hands back to us about what we give and we who have at some time been "hired help" find that time and care and thoughtfulness given to the welfare of farm helpers pays in ways that are often surprising.—M. C. S., Potter County, Pa.

Fatten the Leghorns

IN RAISING Barred Plymouth Rocks and White Leghorn broilers, I soon found that the Rocks brought the best price per pound and were in the greatest demand. A local dealer has found that most of the Leghorn cockerels do not carry enough fat and that Rock broilers kept in refrigerators remain a rich yellow, while the Leghorns become bluish. Then buyers think they are cold storage stock and do not wish to buy them.

Now I sell Rocks to the dealer and ship the Leghorns or sell them to private customers. Private customers like plump Leghorn cockerels after they try them.

Leghorn cockerels are very active and soon develop a good quantity of muscle from exercise on the range. They need to gain a little pad of fat to improve the texture and flavor of the meat. This can be done by reducing the exercise to soften the muscles and increasing the feed to develop the fat.

Fairly good results can be obtained if the birds are confined in crates or colony houses and fed a sloppy mixture of corn meal and sour milk. A very good ration consists of 50 lbs. corn meal, 20 lbs. middlings, and 10 lbs. heavy ground oats mixed with sour milk at the rate of a quart of mash to a quart of milk. Feed the cockerels twice each day for ten days to two weeks.

More Eggs Per Hen

SINCE 1880 the population of the United States has more than doubled. Comparing agricultural production then and now:

The number of sheep in the country has declined.

The number of hogs has remained about the same.

The number of dairy cows has increased by about one-fourth.

Poultry and egg production is more than four times as large.

Find a Market First

It is best to have a market lined up before starting to fatten the birds. Money may be lost by penning up and feeding the birds only to canvass local dealers and find they have bought a supply for the next two weeks.

The advantage of selling fat Leghorn broilers is not so much in the increased profit per bird, but it also helps to make buyers friendlier toward Leghorns. This increases the demand for Leghorn fryers and broilers and will eventually help to hold up summer prices. — R. G. Kirby.

Secure Best Prices

DURING the winter and spring months the greatest quality factor of eggs is size, but when eggs become scarce size is secondary to internal qualities that indicate freshness,—size of air cell, color of yolk and firmness of white.

In order to find out some of the factors that affect the quality of eggs, a questionnaire was sent out by the writer from the New Jersey Experiment Station. The names of the producers and quality of eggs produced were obtained from buyers on the New York market. A study of the answers received, which incidentally represented more than 35,000 birds, revealed the following practices of outstanding importance:

1. Shipping by truck.
2. Avoiding the use of tonics.
3. Feeding the layers at least 10 pounds of grain daily per 100 birds during the summer.
4. The holding of eggs at a temperature below 65 degrees.
5. The shipping of eggs at least twice weekly.
6. Feeding of milk in some form.
7. The addition of minerals to the ration.
8. Feeding a moist mash in addition to the regular dry mash.

The first five of these were the most important and it is very doubtful whether the best price for eggs can be realized if these are not carried out. The eastern poultryman has at his door the best market in the world for high quality eggs. Why not produce what this market wants?—C. S. Platt.

Keep Chicks Vigorous

GOOD thrifty brooder chicks have tight fitting wings and the feathers are glossy and smooth rather than rough and loose. You can judge the quality of chicks and the success in managing the brooder by the texture of the feathers.

It is not enough to have brooder chicks live. They must be kept in fine physical condition. A poor chick that lives is a liability. It uses a lot of feed but may die when fully grown without paying its board bill. It may live a year or more and never be a steady producer. In that case it runs up a big labor bill which is seldom paid.

Don't Cook Them Alive

A brooder stove hover is not the natural environment for chicks. They naturally thrive on cool, moist ground so we should not bake them. They will grow more tightly fitting healthy feathers if they are taught to run on the ground when a few days old. As soon as the wings are feathered chicks can stand quite a lot of cold if they can return often to the warm stove.

Today a strong wind is blowing and the air is cold. Our brooder house doors and windows are closed to keep out wind but the small trapdoors for the chicks are open just enough to let them in and out. Sometimes the ground will be covered with chicks in spite of the strong cool wind and then again all will be out of sight in the houses. But these changes in temperature help to keep them vigorous.—R. G. Kirby.

Lime Water Effective

I DON'T often see lime water recommended for chick diarrhea but it proved so successful with my chicks I think others should try it.

Late this spring I purchased 50 incubator chicks. From the first I gave them diarrhea tablets in their drinking water and sour milk but they kept dying one and two a day.

At last I got a little bottle of lime and made a gallon of the solution. Every day since then I've put some of it in their water, stronger at first, about 4 parts water to 1 part lime water, later much less, and I don't believe I've lost one chick since I started using the lime water. The chicks are healthy now and they were a sickly looking bunch before. —Owl Hollow Farmer's Wife.

ICE-BOUND HEARTS

By James Oliver Curwood

THE STORY THUS FAR

AT POINT FULLERTON, 1000 miles north of civilization, lived Sergeant William MacVeigh of the Royal Northwest Mounted Police and his sick comrade, Private Pelletier. Leaving the sick man, MacVeigh set out for Fort Churchill to deliver the report of his failure to capture the murderer Scottie Deane. While in Churchill a half-breed reported he'd seen a white man and woman. MacVeigh decided to hunt them.

That night he came face to face with a white woman, alone. In a long, rough box on a toboggan, she was taking her dead husband back to her people 200 miles away. After pitching her tent he drew the box inside. The next morning her balsam bed was empty, and a bit of paper pinned to the open and empty box was signed "Mrs. Isobel Deane." The box had held Deane, the murderer.

Soon a party in search of Scottie Deane appeared. One, Bucky Smith, hated Billy. The party rested but Billy struck the trail. To save the murderer and his wife Billy must keep them out of Smith's hands. He would have to make them his own prisoners. The capture was easy. The party arrived a little later. Because of insults Billy had to place Bucky under arrest, then he set off for Point Fullerton.

A false story of Jim Blake's sent Pelletier on a search which ended abruptly when he found a baby, Little Mystery, in a nearby igloo. After MacVeigh's return, Eskimos came for the child and to save her the men fled. In flight they met Scottie Deane, father of the child. Next day, after the death of Deane, MacVeigh struck south taking Little Mystery to Pierre Croisset's cabin where Isobel awaited her husband. Sick with smallpox she blamed Billy with her husband's death and in fear of "the plague" Pierre and his wife deserted. Billy pursued the half-breeds, found the cabin of "Rookie" McTabb and McTabb returned with him to get Little Mystery. Indian Joe went after his mother to care for Isobel. In her delirium the sick woman thinks Billy her dead husband, David Deane. From a newspaper clipping found in the cabin, Billy learns the story of Isobel and Deane and of Isobel's home in Montreal. Days later Indian Joe brought his mother to the cabin. Billy immediately started to Fort Churchill. There he found a letter telling him his share in an investment was $10,000.

(Continued from last week)

BILLY used this unexpected good fortune as an excuse to the inspector when he refused to reenlist. A week after his arrival at Churchill, Bucky Smith was dishonorably discharged from the service. There were several near them when Bucky came up to him with a smile on his face and offered to shake hands.

"I don't bear you any ill-will, Billy," he said loud enough for the others to hear. "Only you've made a big mistake."

And then, in words for Billy's ears alone, he added: "Remember what I promised you! I'll kill you for this, if I have to hunt you round the world!"

A few days later Pelletier left on the last of the slush-snows, in an effort to reach Nelson House before the sledding was gone.

"I wish you'd go with me, Billy," he entreated for the hundredth time. "My girl'd love to have you come, an' you know how I'd like it."

But Billy could not be moved.

"I'll come and see you some day—when you've got the kid," he promised, trying to laugh as he shook hands for the last time with his old comrade.

For three days after Pelletier's departure he remained at the post. On the morning of the fourth, with his pack on his back, and without dogs, he struck off into the north and west.

"I think I'll spend next winter at Fond du Lac," he told the inspector. "If there's any mail for me you can send it there, if you have a chance; and if I'm not at Fond du Lac, it can be returned to Churchill."

HE SAID Fond du Lac, because Deane's grave lay between Churchill and the old Hudson Bay Company's post over in the country of the Athabasca. The barrens were the one thing that called to him—the one thing to which he dared respond. He would keep his promise to Isobel and visit Scottie's grave.

It was as if there were a spirit with him at times, walking at his side and hovering about his campfire at nights; and when he gave himself up to the right mood he felt that it was the presence of Deane. He believed in strong friendship, but he had never believed in the love of man for man. He had not thought that such a thing could exist, except perhaps between father and son. With him, in all the castles he had built and the dreams he had dreamed, the alpha and omega of love had remained with woman. For the first time he knew what it meant to love a man—the memory of a man.

Something held him from telling the secret of his mission at Churchill even to Pelletier. The evening before he left he had smuggled an ax into the edge of the forest, and the second day he found use for this. He came to a straight-grained, thick birch, eighteen inches in diameter, and he put up his tent fifty paces from it. Before he rolled himself in his blankets that night he had cut down the tree. The next day he chopped off the butt, and before another nightfall had hewn out a slab two inches thick, a foot wide, and three feet long. When he took up the trail to the north and west again, the following morning, he left the ax behind.

The fourth night he worked with his hunting-knife and his belt-ax, thinning down the slab and making it smooth. The fifth and the sixth nights he passed in the same way, and he ended the sixth night by heating the end of a small iron rod in the fire and burning the first three letters of Deane's epitaph on the slab. For a time he was puzzled, wondering whether he should use the name Scottie or David. He decided on David.

He did not travel fast, for to him spring was the most beautiful of all seasons in the wilderness. The snow-floods were singing between the ridges and gathering in the hollows. The poplar buds were swollen almost to the bursting point, and the bakneesh vines were as red as blood with the glow of new life.

Seventeen days after he left Churchill he came to the edge of the big barren. For two days he swung westward, and early in the forenoon of the third looked out over the gray waste, dotted with moving caribou, over which he and Pelletier, with little Isobel, had raced ahead of the Eskimos. He went to the cabin first, and entered. It was evident that no one had been there since he had left. On the bunk where Deane had died he found one of baby Isobel's little mittens. He had wondered where she had lost it, and had made her a new one of lynx-skin on the way down to Croisset's cabin.

The tiny bed that he had made for her on the floor was as she had last slept in it, and in the part of a blanket that he had used as a pillow was still the imprint of her head. On the wall hung a pair of old trousers that Deane had worn. Billy looked at these things, standing silently, with his pack at his feet. There was something in the cabin that closed in about him and choked him, and he struggled to overcome it by whistling. His lips seemed thick. At last he turned and went to the grave.

The foxes had been there, and had dug a little about the sapling cross. Outside of that there was no change. During the remainder of the forenoon Billy cut down a heavier sapling, and sunk the butt of it three feet into the half frozen earth at the head of Deane's grave. Then, with spikes he had brought with him, he nailed on the slab. He believed that no one would ever know what the words on that slab meant—no one except himself and the spirit of Scottie Deane. With the end of the heated rod he had burned into the wood:

DAVID DEANE
died Feb. 27, 1908,
beloved of Isobel and the one
who wishes he could take
your place and give
you back to
HER
W. M. April 15, 1908

He did not stop when it was time for dinner, but carried rocks from a ridge a couple of hundred yards away and built a cairn four feet high around the sapling, so that neither storms nor wild animals could knock it down. Then he began a search in the warmest and sunniest parts of the forest, where the green tips of plant life were beginning to reveal themselves. He found snow-flowers, red-glow, and bakneesh, and dug up root after root; and at last, peeping out from between two rocks he found the arrowlike tip of a blue flower. The bakneesh roots he planted about the cairn, and the blue flower he planted at the head of the grave.

IT WAS past midday when he returned to the cabin, and once more he was oppressed by the appalling loneliness of it. It was not as he had thought it would be. Deane's spirit and companionship had seemed to be nearer to him beside his camp-fires and in the forest. He cooked a meal over the stove, but the snapping of the fire seemed strange and unnatural in the deserted room.

Even the air he breathed was heavy with the oppression of death and broken hopes. He found it difficult to swallow the food he had cooked, tho he had eaten nothing since morning. When he was done he looked at his watch. It was four o'clock. The northern sun had dropped behind the distant forests, and was followed now by the thickening gloom of early evening. For a few moments Billy stood motionless outside the cabin. Behind him an owl hooted its lonely mating-song. Over his head a brush-sparrow twittered. It was that hour, just between the end of day and the beginning of night, when the wilderness holds its breath and all is still.

Billy clenched his hands and listened. Something out there in the silence and the gathering darkness was calling him—calling him away from the cabin, away from the grave, and the gray, dead waste of the barren. He turned back into the cabin and put his things into the pack. He took the little mitten to keep with his other treasures, and then went out and closed the door behind him. He passed close to the grave, and for the last time gazed upon the spot where Deane lay dead.

"Good-by, old man," he whispered. "Good-by—"

The owl hooted louder as he turned his face into the west. It made him shiver, and he hurried his steps into the unbroken wilderness that lay for hundreds of miles between him and the post at Fond du Lac.

DAYS and weeks and months of a loneliness which Billy had never known before followed after his pilgrimage to Deane's grave. It was more than loneliness. He had known loneliness, the heart-break and the longing of it, in the black and silent chaos of the arctic night; he had almost gone mad of it, and he had seen Pelletier nearly die for a glimpse of the sun and the sound of a voice.

But this was different. It was something that ate deeper at his soul each day and night that he lived. He had believed that thought of Isobel and his memories of her would make him happier, even tho he never saw her again. But in this he was mistaken. The wilderness does not lead to forgetfulness, and each day her voice seemed nearer and more real to him, and she became more and more insistently a part of his thoughts. Never an hour of the day passed that he did not ask himself where she was.

He hoped that she and the baby Isobel had returned to the old home in Montreal where they would surely find friends and be cared for. And yet the dread was upon him that she had remained in the wilderness, that her love for Deane would keep her there, and that she would find a woman's work at some post between the height of land and the barrens.

At times an overwhelming desire possessed him to return to McTabb's cabin and find where they had gone. But he fought against this desire as a man fights against death. He knew that once he surrendered himself to the temptation to be near her again, he would lose much that he had won in his struggle during the days of plague in Croisset's cabin.

So his feet carried him steadily westward, while the invisible hands tugged at him from behind. He did not go straight to Fond du Lac, but spent nearly three weeks with a trapper whom he ran across on the Pipestone River. It was June when he struck Fond du Lac, and he remained there a month. He had more than half expected to pass the winter there, but the factor at the post proved a disagreeable acquaintance, and he did not like the country. So early in July he set out deeper into the Athabasca country to the west, followed the northern shore of the big lake, and, two months later, came to Fort Chipewyan, near the mouth of the Slave River.

He struck Chipewyan at a fortunate time. A government geological and map-making party was just preparing to leave for the terra incognita between the Great Slave and the Great Bear, and the three men who had come up from Ottawa urged Billy to join them. He jumped at the opportunity, and remained with them until the party returned to the Mackenzie River by way of Fort Providence, five months later. He remained at Fort Providence until late spring, and then came down to Fort Wrigley, where he had several friends in the service.

Fifteen months of wandering had had their effect upon him. He could no longer resist the call of the wanderlust. It urged him from place to place, and stronger and stronger grew in him the desire to return to his old country along the shores of the big bay, far to the east. He had partly planned to join the railroad builders of the new transcontinental in the mountains of British Columbia; but in August, instead of finding himself at Edmonton or Tete Jaune Cache, he was at Prince Albert, three hundred and fifty miles to the east.

From this point he struck northward with a party of company men into the Lac La Ronge country, and in October swung westward, alone, thru the Sissipuk and Burntwood waterways to Nelson House. He continued northward after a week's rest, and on December 18 the first of two great storms which made the winter of 1909-1910 one of the most tragic in the history of the far northern people overtook him thirty miles from York Factory. It took him five days to reach the post where he was held up for several weeks.

These were the first of those terrible weeks of famine and intense cold during which more than fifteen hundred people died in the north country. From the barren lands to the edge of the southern water-shed the earth lay under from four to six feet of snow, and from the middle of December until late in January the temperature did not rise above forty degrees below zero, and remained for the most of the time between fifty and sixty.

From all points in the wilderness reports of starvation and death came to the company's posts. Trap-lines could not be followed because of the intense cold. Moose, caribou, and even the furred animals had buried themselves under the snow. Indians and half-breeds dragged themselves into the posts. Twice at York Factory Billy saw mothers who brought dead babies in their arms. One day a white trapper came in with his dogs, and on the sledge, wrapped in a bear-skin, was his wife, who had died fifty miles back in the forest.

DURING these terrible weeks Billy found it impossible to keep Isobel and the baby Isobel out of his mind night or day. The fear grew in him that somewhere in the wilderness they were suffering, as others were suffering. So obsessed did he become that he had a terrible dream one night, and in that dream baby Isobel's face appeared to him, a death-like mask, white and cold and thinned by starvation.

The vision decided him. He would go to Fort Churchill; and if McTabb had not been driven in he would go to his cabin, over on the Little Beaver, and learn what had become of Isobel and the little girl. A few days later on January 27, there came a sudden rise in the temperature, and Billy prepared at once to take advantage of the change. A half-breed, on his way to Churchill, accompanied him, and they set out together the following morning. On February 20 they arrived at Fort Churchill.

Billy went immediately to detachment headquarters. There had been several changes in two years, and there was only one of the old force to shake hands with him. His first inquiry was about McTabb and Isobel Deane. Neither was at Churchill, nor had either been there since the arrival of the new officer in charge.

But there was mail for Billy—three letters. There had been half a dozen others, but they were now following up his old trails somewhere out in the wilderness. These three had been returned recently from Fond du Lac. One was from Pelletier—the fourth he had written, he said, without an answer. The "kid" had come—a girl—and he wondered if Billy was dead. The second letter was from his Cobalt partner.

The third he turned over several times before he opened it. It did not look much like a letter. It was torn and ragged at the edges, and was so soiled and water-stained that the address on it was only partly legible. It had been to Fond du Lac, and from there it had followed him to Fort Chipewyan. He opened it, and found that the writing inside was scarcely more legible than the inscription on the envelope. The last words were quite plain, and he gave a low cry when he found that it was from Rookie McTabb.

He went close to a window, and tried to make out what McTabb had written. Here and there, where water had not obliterated the writing, he could make out a line or a few words. Nearly all was gone but the last paragraph, and when Billy came to this and read the first words of it his heart seemed all at once to die within him, and he could not see. Word by word he made out the rest after that, and when he was done he turned his stony face to the white whirl of the storm that was raging outside the window, his lips as dry as tho he had passed thru a fever.

A part of that last paragraph was unintelligible, but enough was left to tell him what had happened in the cabin down on the Little Beaver. McTabb had written:

> We thought she was getting well . . . Took sick again . . . Did everything could. But it didn't do any good . . . Died just five weeks to a day after you left. We buried her just behind the cabin. God . . . that kid. You don't know how I got to love her, Billy . . . Give her up . . .

There were a dozen lines after that, but all of them water-stained and unintelligible.

Billy crushed the letter in his hand. The new inspector wondered what terrible news he had received as he walked out into the blinding chaos of the storm.

For ten minutes Billy buried himself blindly in the storm. He scarcely knew which direction he took; but at last he found himself in the shelter of the forest, and he was whispering Isobel's name over and over again to himself.

"Dead—dead!" he moaned. "She is dead—dead!"

And then there rushed upon him, crushing back his deeper grief, a thought of baby Isobel. She was still with McTabb, down on the Little Beaver. In the blur of the storm he read again what he could make out of Rookie's letter. Something in that last paragraph struck him with a deadly fear:

"God . . . that kid! You don't know how I got to love her, Billy. Give her up . . ."

What did it mean? What had McTabb told him in that part of the letter that was gone?

The reaction came as he put the letter back into his pocket. He walked swiftly back to the inspector's office.

"I'm going down to the Little Beaver. I'm going to start today," he said. "Who is there in Churchill that I can get to go with me?"

Two hours later Billy was ready to start with an Indian as a companion. Dogs could not be had for love or money, and they set out on snowshoes with two weeks' supply of provisions, striking south and west. The remainder of that day, and the next, they traveled with but little rest. Each hour that passed added to Billy's mad impatience to reach McTabb's cabin.

With the morning of the third day began the second of those two terrible storms which swept over the northland in that winter of famine and death. In spite of the Indian's advice to build a permanent camp until the temperature rose again, Billy insisted on pushing ahead. The fifth night, in the wild, barren country west of the Etawney, his Indian failed to keep up the fire, and when Billy investigated he found his companion half dead with a strange sickness.

He made the Indian's balsam shelter snow and wind proof, cut wood and waited. The temperature continued to fall, and the cold became intense. Each day the provisions grew less, and at last the time came when Billy knew that he was standing face to face with the great peril. He went farther and farther from camp in his search for game. Even the brush-sparrows and snow-hawks were gone.

(To be continued next week)

A Little Red Schoolhouse on the Dark Continent

In this school at Kasankamona's old village, in Central Africa, the benches are small ant hills set side by side, plastered over with clay. over with clay.

Did you ever hear this one?—

An old Scotch lady on her death bed was discussing the funeral arrangements with her husband.

"Ye ken Jock," she said, "ye haven't spoken to my sister Annie for twenty years and my dying wish is that ye drive to my funeral in the same carriage with Annie."

"I'll do it," replied Jock sadly, "but I'm telling ye it will entirely spoil the day for me!"

Wife (enthusiastically)—Niagara! The most magnificent sight we've ever set eyes upon! Do you know, Henry, when I look at that, I just feel as tho I can't say anything at all.

Henry—Well, shut up, then!

Victim—Your invention will increase the speed of my car, did you say?

Salesman—Yes, your car has 50 horsepower, hasn't it?

Victim—About that.

Salesman—Well, this little device I'm selling will twist the tail of each horse.

Canvasser—Madam, will you donate something to the new hospital?

Mrs. Clancy (who has just finished an argument)—Well, ye might step in an' take a look at Clancy. Maybe he'd do.

The saddest words a farmer can utter
Are: Yes, we have no milk and butter.

Owing to a big rush of job printing and for lack of space a number of births and deaths will be postponed until next week.—Steeleville Ledger.

"I'm afraid, doctor," said Mrs. Peck, "that my husband has some terrible mental affliction. Sometimes I talk to him for hours, and then find he hasn't heard a word."

"That isn't an affliction, madam," said the weary doctor. "That's a gift."—The Pepper Pot.

The woodpecker wept in deep dismay,
As the shades of evening stole,
For he had been pecking all the day
At a concrete electric pole.—Ex.

News and Notes

DLASKA produces other crops besides reindeer, gold, furs and canned salmon. Early maturing varieties of barley, oats and spring wheat are grown in considerable quantities.

* * *

Thirty-seven years ago a Chinese came to this country with a few hundred dollars he had saved and went to farming. He died the other day, worth over $3,000,000. He made those millions of dollars on his farms in California and Oregon by mixing hard work with the best scientific methods. On the side he studied philosophy, art, literature, and wrote Chinese verse.

* * *

The fourth assistant postmaster general, who has charge of R. F. D. service recently requested that all rural mail boxes be painted white. He reports that already all of the patrons on 714 rural routes have painted their boxes as requested.

* * *

Over one-third of all the farm land in New York state is in pasture. In dairy sections the proportion is much more than one-third.

Slot machines are being installed to collect tolls on the new Delaware River Bridge, between Philadelphia and Camden, which is to be opened for traffic on July 1st. Each automobile driver must drop a quarter in the slot to cross the bridge. Ten slot machines will accommodate 4000 cars per hour.

* * *

The fish and game commisioner in a western state had a bright idea. Fish like bugs, and so do pheasants. So the commissioner strung electric lights across his fish ponds and pheasant pens. During the warm months the insects flock to the lights, and so do the fish and pheasants. The finny and feathered tribes are reported to have a good time.

* * *

In 1878 an Illinois bank failed, thru no fault of its officers. Creditors received 70 cents on the dollar. The president died and his son resolved to pay every cent that anyone had lost in the failure. He worked for 47 years to earn the necessary money, paid off the last cent at Christmas, 1925, and died a short time thereafter.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Hello, Everybody:—Cousin Ruth, you ought to have been at Davidsburg where we live to see a tractor pull a brooder house around the barn. I have a horse called Bess. I ride her. I planted corn alone with her. I got out of the row sometimes but you know in a crooked row more corn grows than in a straight row.

If my dog comes to Philadelphia some time get a stick and send him back. I tie him sometimes but as soon as I let him loose off he goes.—Henry C. Harlacher, eight (X), York County, Pa.

Dear Cousin Ruth and Forum Friends:—You should see our little calves. One of them is two weeks old, one is one week old and the other is not a week old yet. They look so much alike and are so near the same size that I can hardly tell them apart. They are all little heifers and we are going to raise them.

I went to Delta to the Ladies' Aid last night and I had to recite a piece about being washed clean.—Adrian Norris (X), York County, Pa.

Dear Forum Friends:—My girl friend, Verna Kaufman, gets Pennsylvania Farmer and brings it to school and I find it very interesting.

I don't live on a farm but when school is out I go on my vacation to a large farm of over 250 acres. In the evening I help milk and hunt the eggs. I like to hunt the eggs. They have 400 chickens and get a lot of eggs. I don't know the exact number.

We have a dog named Bess. We are getting a little yellow kitten and I will call it Goldy.—Emma, Mae Forney, eleven (X), Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—I have two white pet rabbits and one of them has five baby rabbits that are snow white. I have a little pet lamb that is mine, too, because I raised him on a bottle. We have eight big sheep and three cows. I would rather take the cows to pasture than the sheep.

I like our dog, Major, for if I go any place thru the woods that I am afraid I take him along. He won't let anything hurt me. He is beginning to like to go along every place but some times he must stay at home. It doesn't suit to take a dog along.—Norman Grim, eleven (X), York County, Pa.

I'M THE ONE STANDING
Edith Norris, (X), York County, Pa.

Dear Cousin Ruth and Forum Friends:—I thank you ever and ever so much for the membership pin. I never thought of getting a pin.

Last year in school we studied about cotton. Then I sent down to Greenville, Mississippi. About a month afterwards I got two cotton balls. Did you ever see a cotton ball?

My dad has a sawmill. There is a cherry tree nearby. Two robins built their nest on the lowest bough. We didn't see it till there were two little robins in the nest with feathers on them. Just about a week or two ago they flew out of the nest.—Katie Mast, (X), Lawrence County, Pa.

Dear Cousin Ruth:—Just a few lines to thank you for my beautiful school-box outfit which I received a few days ago, also many thanks for the pin.

If all the Forum friends knew how much I appreciated my presents they would sure work hard for them, too.

Cousin Ruth, if you wish me to, I will get my sister to take my picture and I will send it in to the Forum page.—Ruth Stuckey, ten (X), Bradford County, Pa.

Do send your picture sometime.

Dear Cousin Ruth:—I am sending a picture of our basket ball team. From left to right: Sarah Hilliard, Annabell Hummel, Betty Campbell, Katherine Schmid, and Audine Biltz.

This picture was taken in front of the school. — Katherine Schmid, eleven (X), Venango County, Pa.

WE HAVE JOLLY TIMES TOGETHER
Katherine Schmid, (X), Venango Co., Pa.

Dear Cousin Ruth and Forum Friends:—My sister and I are raising two little twin lambs on the bottle. I enjoy helping to feed them very much. Mother is raising two little Guernsey calves.

How many Forum friends like to read? I have read about 18 books thru. I have to watch the cows and so I have lots of time to read.

I am taking music lessons on the piano and like it a lot. My sister can play the piano some, too. My father plays the violin, guitar and piano.—Helen E. Clippinger, fourteen (X), Cumberland County, Pa.

Dear Cousin Ruth and Forum Friends:—We have two black cats and a dog whose name is Bob. He is a good dog to chase the chickens and bring the cows. Last summer we went to pick blackberries and we took him with us so now when we put a straw hat on to hoe in the garden or work in the fields he watches us and comes up to us and whines.

We have two horses, Jim and Maud. Last winter Maud would get loose, go behind Jim, unlock the door and go out and run around in the snow.

Last winter we had a rooster that would flop us whenever we went out. He would flop my little two-year-old brother. One day it flopped him and he ran in the house. Mother asked him what we should do with the rooster and he said we should put him in the car and buy candy with him. So we sold him.—Luciel Derrick, (X), Lycoming County, Pa.

Dear Cousin Ruth and Forum Friends:—We have fourteen Guernsey cattle all T. B. tested. My brother and I lead the horses and colts out to eat grass. I help my father on the farm and enjoy it very much. My brother and I each have a pet rabbit.

I am spending this week with my Uncle Joe and am helping to pick strawberries.—Glenn R. Haulman, twelve, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—How many of you are picking strawberries? We are. They are just starting to ripen and the vines are loaded with big ones. They are as big as a silver dollar. I thought about sending you some, Cousin Ruth, but just didn't know how.

I'll have to stop awhile now to help milk. I only help on Sundays, except when we have company. We milk 14 cows twice a day and get 60 gallons of milk.

Here is a recipe for biscuits:

BUTTERSCOTCH ROLLS

2 cups flour
4 teaspoons baking powder
⅔ teaspoon salt
4 tablespoons shortening
⅔ cup milk or water
Brown sugar
Butter

Sift dry ingredients; add shortening, mixing it in with a fork (if liquid shortening is used add with milk). Add milk to make a fairly soft dough. Knead slightly and roll out one-quarter inches thick. Spread well with creamed butter and brown sugar.

Roll up as for jelly roll; cut in one-inch pieces. Stand on end in well-buttered gem pans or small greased muffin rings. Bake in a hot oven about 15 minutes. If desired, pecan nuts may be sprinkled in before rolling.

Hope some of the Forum girls like it and tell me so.—Naomi Kuehn, sixteen, Frederick County, Md.

Dear Cousin Ruth and Forum Friends:—I wish you could see my school report. I got all A's the whole term. We will have our same teacher next year and I am so glad.

I went to school every day and got my certificate the other day and who said I wasn't a happy girl. I wish I could always have a report like this year.

I baked a cake and gave a piece to my teacher. He said it was better than what his mother baked. He liked the orange flavor. When I was three years old I baked my first cake by using a Bantam egg and one of my play cups.

Were you ever at Kennett Square? My daddy worked there last summer. — Eleanor Louise Valentine, seven (X), Union County, Pa.

Look for the announcement of the winners in the Jumbled Sentence Contest next week. There were such piles of answers that I couldn't get them all read in time to award prizes this week. What shall our next contest be?

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

DEAR LITTLE FOLKS:—This is a very queer looking arithmetic example, isn't it? All you have to do to make the group of "tens" really equal one hundred thousand is to place a minus sign at exactly the right place. I don't want to help you too much, but it might be a good idea to suggest that maybe you could take two "tens" together and call them "1010"—or if not that, something like that. When you have found the answer, place the minus sign in the correct place and send me the little arithmetic example on a POSTAL CARD so that it reaches me by July 3rd. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer whose cards are the best in spelling, grammar, punctuation, penmanship and general appearance will each be awarded a set of pictures. Some of our Little Folks are very careless and make simple mistakes weekly.

The answer to the puzzle published in the June 5 issue of Pennsylvania Farmer is: (1) ELEPHANT (c) WAVED TRUNK; (2) SHETLAND PONY (d) WITH LONG MANE AND TAIL; (3) CLOWN (h) CRACKED JOKES; (4) GIRAFFE (g) STRETCHED HIS LONG NECK; (5) ZEBRA (a) WITH DARK STRIPES AROUND HIS BODY; (6) MONKEY (e) CLIMB TO THE TOP OF HIS CAGE; (7) SEAL (b) FLOPPED ABOUT ON HIS FINS; (8) LION (f) ROARED.

The puzzle prize winners are: Martha M. Anderson, age 10, Indiana, Pa.; Carrie Arnold, age 6, Bedford, Pa.; James Bressler, age 11, Hegins, Pa.; Harold Heichel, age 9, Howard, Pa.; Arthur High Otto, age 10, Carlisle, Pa.; Mary Kathryn Pound, age 11, Indiana, Pa.; Mabel E. Rohrer, age 12, Doylestown, Pa.; Melvin Shadle, age 11, Hegins, Pa.; Ignatius Charles Valenczius, age 10, Freehold, N. J.; Arthur Wedger, age 11, Berwick, Pa.

HELP FOR FARM WOMEN

Call on the Extension Workers of Your State When Problems Vex You

THE farm woman of today has unusual opportunities for keeping up-to-date in her housekeeping methods in the care and feeding of her children, in the nourishment given her family, and in the selection and making of clothes and hats.

There are several agencies all contributing to this end. Magazines are numerous and authoritative in illustration and text matter. The radio brings in daily information on scores of topics, especially for the mother and housekeeper.

But of more practical value than all of these are the Home Bureau units operating in connection with the state colleges of home economics or the state colleges of agriculture. Usually the home economics is a department of the agricultural curriculum.

A Part of the State Colleges

In reality, these Home Bureau units are an extension service of the regular college instruction work, and are intended to stimulate interest and greater efficiency in home problems. Actual technical assistance is given thru instructors sent out by the state colleges and by groups of Home Bureau women who meet regularly, make a special study of subjects of value to them, such as home nursing, home canning, the feeding of the school boy and girl, etc. These groups are headed in some states by a trained graduate county Home Bureau expert.

The farm woman thus often can obtain technical training easier than the town or city woman. County agents and extension teachers make free use of the knowledge, experiments, and laboratory findings of the State College of Home Economics, and of the United States Bureau of Home Economics.

Thru these well-organized channels, information quickly reaches the woman on the farm, and knowing what she wants and what she can use, and having little time to waste on non-essentials, she demands and makes use of that which is really valuable and practical for her own particular case.

Educational work of this character is, and should be, largely supported by public funds. It is the foundation of health, comfort and often the happiness of the people in rural communities, and upon their well-being depends in large measure, the economic conditions of the whole country.

Put Sound Practices into Use

As Martha Van Rensselaer, head of the State College of Home Economics, Ithaca, N. Y., recently stated:

"The teaching that we should have daily two vegetables in addition to potatoes, a quart of milk, two servings of fruit, more whole than refined cereals, sounds simple. It is simple, but it is founded on highly technical investigation. It is the responsibility of the extension leaders and the intelligent homemakers who appreciate the connection between food selection, health, individual happiness, and national prosperity to develop a widespread desire to put such simple and sound practices into common use. This is but one example of what these extension teachers and homemakers are attempting to do in their partnership for educational purposes.

"Innumerable projects are under way for improving the family's year-round food supply, for the better feeding of children, for the correction of overweight, underweight, constipation, and indigestion, for preparing and preserving food attractively and successfully, for making kitchens more convenient and pleasant places in which to work, for selecting equipment more intelligently, for applying principles of economy and of design in making and buying clothing and in selecting and arranging furnishings, for training children in such a way as to develop healthy, happy, self-controlled and cooperative individuals, for providing good forms of recreation for family and community, for beautifying private and public grounds.

Many Leaders at Work

"This work is being directed locally by over 6000 leaders who have been elected by the groups. These leaders, with the help of the agents and the college specialists analyze the local situation and make plans for work."

Thus it is obvious that the farm woman is no longer isolated and ready to look with timid admiration upon her city sister. She is as well dressed as her means permit. A far greater percentage of country people have telephones and automobiles than of large city people. There is more time for reading and thought, and the Home Bureau work corresponds to the club work of the city in large measure.—Dorcas Webster, N. Y.

What Investment Means Most to You?

Join the Contest—Tell Others What Expenditure Has Yielded Best Returns

SOMETIME during the past year or two many of our family have made what they believe to be the crowning investment of their lives. Perhaps it was an oil range like Mrs. Ford's, a sweeper like Mrs. Ward's, a pressure cooker, the installation of electricity in the home or running water that made possible a bathroom and an ideal laundry. Whatever it was, these or many other things—some gilt-edged bonds, a new radio, a piano, time and study in some special line of work that has greatly benefited you—help others by sharing your experience with them. Write a letter telling about it. Enter this contest observing the following rules:

1. Type your letter if possible.
2. Limit yourself to 250 words.
3. Include a photo if the subject of your letter can be photographed.
4. Letters must tell exactly what your fine investment was—what it cost in time, effort or money, and just why you think it a wise one.
5. Write full name and address plainly in upper left-hand corner of your first page.
6. Remember the contest closes August 1st.

There will be a prize of $5 awarded for the best letter submitted in the contest and one of $3 as second. A special prize of a kitchen knife sharpener will be given for all other helpful letters published.

Sweeping Simplified

HOW many of Our Page readers know the value of the vacuum sweeper? If you do not have one, save your pin money and make a purchase you will never regret.

Altho we have our own electric plant, my non-electric sweeper is the most useful article in our home. It will collect bits of paper, crumbs and all the little litter that collects on the floor daily. The seven-year lad of the home uses it and cleans the living room, dining room and hall in a very short time; I might not trust him with the electric but this one he uses with ease and can never get tangled up with anything. Try a vacuum sweeper at your first opportunity and be convinced.—Mrs. A. Ward, Pa.

My Cherished Oil Stove

FOR two years I used wood or coal in my kitchen range. One afternoon last July, I preserved and canned plums with the wood fire. When Mr. Ford came in to supper he was delighted with the fine array of filled jars cooling on the kitchen table but his happiness fled when he noticed how hot and exhausted I was. The very next day we purchased our oil stove, and it has given us wonderful satisfaction for ten months. I never would have thought that cooking, canning and baking could be so greatly simplified: I seem to accomplish all the stove tasks with about one-fourth the former effort. There is never a fire to build, a stove difficult to clean, nor an ash pan to be emptied.

This oil stove saves a great deal of my precious time (incidentally, time for the man of the house, too). The cost for fuel is greatly reduced. And now that hot weather is here again, I am so thankful that in just a few moments after the meal is prepared, the kitchen is cooled off. With wood or coal fires at least a half hour is spent in the heat of the dying fire.

The Oven Works Like a Charm

My oven works splendidly. Glass doors enable me to watch how the baking is progressing, thermometers give the timely warnings and the heat can be adjusted as needed.

At a moment's notice, day or night, I can have a hot flame underneath anything I wish to heat. I have used the quick heat also for an incidental ironing, altho ordinarily I use an electric iron.

I can cook as rapidly as my cousins in the city who use gas, and my only needs are oil and matches. Our oil stove is our prize possession for economy of labor, time and fuel cost. —Betsy Ford, Md.

Try a Course

DO YOU know of the pleasure and help that can be obtained thru the courses offered in the Extension Division of Pennsylvania's College of Agriculture? There is no tuition, no set time when you must finish; for many courses, no books to buy, and the help is given in such a friendly way.

I have taken several courses, and enjoyed each one to the full. The help comes in various ways, but to me the greatest was in learning to help myself. The cooking course taught me this. Everything is so everyday, so practical, so just what the busy farm woman needs in cooking, canning, preserving, growing vegetables and flowers. The teaching enables one to save much labor and yet have best results.

Courses may be started at any time, and questions are gladly answered. No matter if one has but little time, a few minutes each day will accomplish much if you are steady and sincere.—Potter County Reader, Pa.

This Ohio farm woman—once an expert accountant in the city—values her kitchen cabinet highly. This photo is more than ten years old. Now she enjoys the comforts of a bathroom and furnace in her newly built home and among the helps in her kitchen are an oil stove, pressure cooker and bread and cake mixer.

Have an Income all Your Own

In Many Ways You Can Earn Money for Extras

NO MATTER how large an income comes from the farm every woman should have some vocation or avocation by which she can earn pin-money which is entirely her own. The joy of following some special interest and making it financially profitable gives much satisfaction.

The clever farm woman can find many ways which offer great opportunity besides the well-known ones of preserving fruits and raising chickens. A pleasant variation from poultry work and yet in the same field, is raising squabs for a special market or hotel. These always bring a good price and are profitable. So are capons which may be given a little more time than chickens and more than repay for the effort.

Many women fill their pocketbooks each year from small berries and fruit, cooperating with the children in picking, mulching, pruning. Picked clean and full measure these are sure to find sale among a few select customers who are glad to pay for quality and will buy all season from the first strawberries and raspberries to blackberries and cultivated huckleberries. A very small piece of land may be made to pay well in this way, and for the woman who keeps a farm home, it is far better for her to earn pin money out of doors than working over the hot stove.

Or Supply a Gift Shop

More than one woman has made the most of her country home by supplying gift shops with souvenirs. Bark from trees, dried berries and grasses, floss from milk weed, butterflies, dried herbs, (especially lavender), bunches of straw flowers, woven baskets of grass and strips of bark, rough trays—all find ready sale and are a joy to make.

Then there are country clubs and hotels who do not keep a gardener and are glad to receive suitable table decorations several times a week. From the first pussy willows of spring along with forced fruit buds, thru the early wild flower time to rose and old fashioned garden products up to asters and golden rod, the fields and garden supply to please the trade.

Then there are gay leaves and red berries and trailing evergreens for winter with bulbs of narcissus, hyacinth and tiny potted petunias, pansies and vines. No end of change to keep the hotel supplied with different decoration.

Find a way to earn pin money so that the gifts you give and the little personal charities and the queer extravagances of travel and dress are your own. There are countless opportunities. Find them.—Effie Maurine Page, Pa.

Delightful Hobbies

FARM life for women is often considered monotonous—but like life anywhere, it is just what we make it. It may be the same humdrum routine day by day, year in and year out, or it may be greatly brightened by a special interest which gives us something to hustle for, and something different to think about while we are sweeping and dusting, weeding and gardening, churning and baking.

My Neighbor Loves Flowers

My neighbor's hobby is raising flowers, and she takes constant delight in caring for them. She reaps a splendid income, too, from all she sells.

Hand work was always my specialty, and last year I studied a few definite crafts, of which I will tell you. Just before the holidays last year, I learned of a place where materials and instruction by mail could readily be obtained. I took advantage of it, and painted 150 greeting cards which I sold at ten cents each.

We Work Together

I studied the wax-craft work and made many pieces, not only for my gifts but for sale in one of our stores. I have taught my daughter of thirteen, and we work together decorating articles for the home in enamel and Oriental lacquer.

My next field is parchment work, and I shall make lamp shades for at home and to sell. I expect very soon to have sold enough to entirely pay for the vacuum sweeper for which I have been hoping.

You can do something, too, so think it over and get busy.—Nora Kelley, Pa.

Note:—The name and address of the firm to which Mrs. Kelley refers will be given if you send a stamped, addressed envelope for reply to Home Page Editor, care of Pennsylvania Farmer, 261 S. Third St., Phila., Pa.

Find Children's Reasons

IN DEALING with children it is necessary to find out their reasons and motives. Many times what seems like flagrant disregard for the parents' requests is to the child only an earnest desire to help mother or father.

One little girl of four, who had been told time and again not to play with water, when found in the kitchen dripping wet, was punished for her disobedience. Later it was learned that she had climbed up on the sink to get a basin of water and cloth with which to wash the finger marks off the doorway as she had seen mother do. She slipped, the water spilled, and punishment followed. To her it must have looked as if she were punished for trying to help.

Some restrictions are placed on children that are almost a physical impossibility for them to carry out. "Sit still" and "Be quiet" are very easy to say, and yet to a healthy youngster, full of life and vigor, such commands are extremely hard to obey for more than a few minutes at a time.

Little children are growing and developing new muscle power all the time, and they must have freedom to run, jump, shout, and play. Nature demands it. If possible give them a place with few dangers or hampering restrictions where they may safely "work off their steam" unchecked by continual flagging.

Ideal Blanket Shelves

USE slatted shelves in the clothes closet if that is where you store your bedding, quilts and blankets. I made my shelves with three slats each, leaving a space next the wall and a small space between each neighboring slat. For forty years these shelves have been in use, and altho the closet is windowless, I have had no moth troubles and never the faintest smell of mustiness.—Clarice Raymond, N. Y.

Stuffed Cabbage

SELECT a rather small, well-shaped head of cabbage. Cut a slice off the top and hollow out the cabbage, leaving only a thin shell. Make a stuffing, as directed, and pack into the cabbage, the latter should be previously freshened by standing in cold water for thirty minutes: 1 egg, 1 pound sausage meat, 1 cup bread crumbs, ¼ cup milk and a small pinch of mace. Fill the cavity three-quarters full. Tie in a cloth to aid in preserving its shape, and steam from 2 to 2½ hours. Serve with tomato sauce. One can of tomato soup, well seasoned, will do in place of the sauce.—E. M. L. B., Pa.

Send for Bulletin

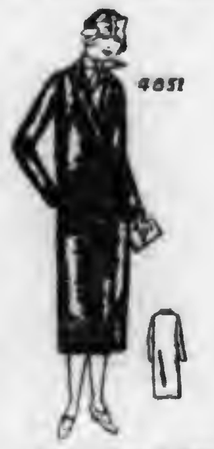
WHEN thinking of the adolescents in the pickle eating and ice cream age the old, old question—What shall we eat? is well answered for mothers of Juniors. Send at once to the U. S. Department of Agriculture, Washington, D. C. asking for Miscellaneous Circular 49, "A Guide to Good Meals for the Junior Homemaker."

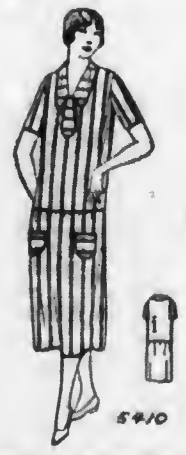
A Bit of Everything

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

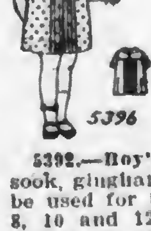
4851.—A Stylish Coat.—This model is good for any of the season's coat materials, and very smart in taffeta. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅜ yards of 40-inch material. Pattern, 10 cents.

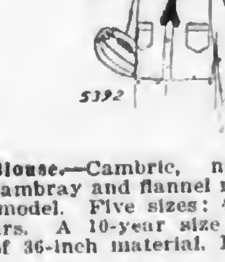
5410—Pretty and Comfortable for Summer.—Striped percale, gingham or tub silk can be used for this design. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅞ yards of 36-inch material. Pattern, 10 cents.





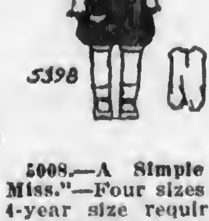
5396.—For a Tiny Tot.—Silk, voile, dimity or crepe may be used for this little dress. Five sizes: 1, 2, 3, 4 and 5 years. A 3-year size requires 2¼ yards of 32-inch material, and ¼ yard of contrasting material for collar and cuff facings. Pattern, 10c.

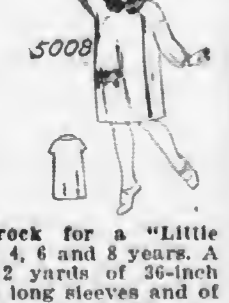




5392.—Boy's Blouse.—Cambric, nainsook, gingham, chambray and flannel may be used for this model. Five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 1⅝ yard of 36-inch material. Pattern, 10 cents.

5398.—Rompers.—Checked gingham was here used with white linen for the bands and pocket. Seersucker, crepe and linen are also good. Three sizes: 6 months, 1 and 2 years. A 2-year size requires 1⅜ yard of 36-inch material with ⅛ yard of contrasting material for pocket and facings. Pattern, 10 cents.





5008.—A Simple Frock for a "Little Miss."—Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 2 yards of 36-inch material if made with long sleeves and of one material. For collar, band cuffs and pocket of contrasting material ⅝ yard will be required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1926 Book of Fashions.

Feeds (selling prices)—Bran, $34@35; shorts, $35@36; hominy, $36@37; middlings, $39@40; linseed, $56@57; gluten, $44.50@45.50; ground oats, $39.50@40.50; cottonseed, 41 per cent, $44@45; dairy feeds, 16 per cent, $34@35; 18 per cent, $38@39; 20 per cent, $41@42; 24 per cent, $44@45; 25 per cent, $47@48; horse feed, 85 per cent, $41.50@42.50.

LIVESTOCK

Review of local market for week ending June 19, 1926: Market opened slow. Comparisons with week ago: Beef steers steady, quality mostly good to choice; top heavies, $10.25; average weight, 1510 lbs; top yearlings, $10.15, weight 1040 lbs, several loads, $9.40@9.75; bulk, $8.75@9.25. Bulls and heifers, steady; cows about steady, good demand for reactor dairy cows; bulk, $3.50@4.50; few fat cows on market. Stock bulls active; fully steady; bulk, $6@6.75. Calves steady, top vealers, $14.50. Hogs inactive, no receipts.

Receipts for Saturday's market: Cattle, 10 cars; 4 from Kansas City, 3 St Paul, 3 St Louis, containing 314 head, 479 head trucked in from nearby farms. Total cattle, 793 head, 25 calves. Receipts for week ending June 19, 1926: Cattle, 41 cars; 12 from Penna, 9 St Paul, 8 St Louis, 5 Kansas City, 3 Ohio, 2 Maryland, 1 Tennessee, 1 Chicago, containing 1106 head, 1395 head trucked in. Total cattle, 2501 head, 279 calves. Compared with previous week: Cattle, 28 cars containing 690 head, 1300 head trucked in. Total: cattle, 1990 head, 374 calves, 196 hogs, 14 sheep.

Steers:—	
Good to choice	$9.00@10.25
Fair to good	8.50@ 9.00
Medium to fair	8.00@ 8.50
Common to medium	7.25@ 8.00
Cows:—	
Good to choice	5.75@7.00
Medium to good	4.50@5.75
Common to medium	4.00@4.50
Canners and cutters	3.00@4.00
Calves:—	
Good to choice	13.00@14.50
Medium	10.00@13.00
Common	5.00@10.00
Hogs:—	
Heavyweights, 200@250 lbs	13.50@14.75
Mediumweights, 150@200 lbs	14.75@16.00
Lightweights, 100@150 lbs	15.00@16.00
Rough stock	10.75@13.50

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .41	$ .41½	$ .41½	$ .42
Eggs, fresh gathered extra firsts (N. Y.)	.31¼	.31	.32⅛	.35
Steers, good to choice (Lancaster)	9.67½	9.50	9.00	10.37½
Hay, Number 2 timothy, baled (Phila.)	26.50	26.50	26.50	18.00
Wheat, No. 2 red winter (Philadelphia)	1.62½	1.60	1.73½	1.72
Corn, No. 2 yellow (Philadelphia)	.75	.72½	.75¾	1.29½
Oats, Number 2 white (Philadelphia)	.52	.53¼	.52	.64

NEW YORK MARKETS

June 21, 1926.

PRODUCE

Butter—Firm; receipts, 12,420 tubs; creamery, higher than extras, 41½@42c; creamery, extras, 92 score, 41c; creamery, firsts, 88@91 score, 38@40½c; packing stock, current make, No 2, 31c.

Eggs—Steady; receipts, 22,065 cases; fresh-gathered, extra firsts, 30½@32c; do, storage packed, unquoted; fresh gathered firsts, 29@30c; do, storage packed, unquoted; fresh gathered seconds, 28@28½c; do, storage packed, unquoted; nearby hennery whites, closely selected extras, 38@39c; nearby and nearby western hennery whites, firsts to average extras, 32½@37c; nearby pullets, 32c; nearby hennery browns, extras, 34@38c; Pacific Coast whites, extra firsts, 37½@38½c; processed extras, 40½@41c.

Cheese—Firm; receipts, 138,235 pounds; state, whole milk, flats, fresh, fancy to fancy specials, 21¾@23c; do, average run, unquoted; state, whole milk, flats, held, fancy to fancy specials, 27@28c; do, average run, 26@26½c.

Live Poultry—No quotations.

Dressed Poultry—Irregular; chickens, fresh, 40@50c; do, frozen, 30@45c; fowls, fresh, 29@35c; do, frozen, 28@35c; old roosters, 18@23c; turkeys, fresh, 30@40c; do, frozen, 44@64c.

LIVESTOCK

Cattle—Steady; steers, $7@10.25; state bulls, $4@6.60; cows, $2.50@5.50.

Calves—Steady; veals, common to prime, $6@15; culls and little calves, $6@8; grassers and fed calves, $5@7.50.

Sheep and Lambs—Steady; sheep, $3@7.50; culls, $2@3; lambs, Ohio, medium to prime, $11@15; springers, 65 to 75 pounds $15.50@16.50; culls, $8@10.

Hogs—Irregular; light to medium weights, $14.50@14.75; pigs, $15.25@15.50; heavy hogs, $13.75@14.50; roughs, $12@12.75.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt shipment: City bran, $31; middlings, $31, in 100 lb sacks; red dog, $38, nominal, in 100-lb sacks; western spring bran, $29.25; standard middlings, $29.25; flour middlings, $34; red dog, $37@37.50, all in 100-lb sacks, all-rail and lake-and-rail shipment; white hominy feed, $31.10, in 100-lb sacks; cottonseed meal, 36 per cent protein, $38.50; prompt shipment linseed oil meal, $51.35, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $30; No 2, $28@29; No 3, $26; sample, $19@20. Straw, large bales, rye, $21@23.

Grains—WHEAT, No 2 red, c i f, dom, $1.87⅛; No 1 dark spring, c i f, domestic, $1.68⅛; No 2 hard winter, f o b, export, $1.75⅛; No 1 North Manitoba, in bond, f o b, export, $1.72¾; No 2 mixed durum, f o b, export, $1.55⅛. CORN, No 2 yellow, 83⅞c; No 3 yellow, 81⅝c. OATS, No 2 white, 52c; No 3 white, 50¾c; No 4 white, 49¾c; ordinary white, clipped, 50½@50¾c; fancy white, clipped, 54@55¼c. RYE, c i f, export, $1.04⅞. BARLEY, malting, c i f, dom, 84@87c.

YORK PRODUCE

Butter and Eggs—Country butter, 45@50c; separator, 50@55c; eggs, 28@35c.

Vegetables—Potatoes, old, 25@50c ½ pk; new, 25@40c ½ pk; cabbage, 3@10c hd; lettuce, 10@20c hd; celery, 8@15c hd; horseradish, 5@10c glass; onions, 10@15c ¼ pk, 3@5c bch; lima beans, 35c qt; soup beans, 10@15c pt; peas, early small, 20@22c ¼ pk; large, 25@30c ¼ pk; string beans, 18@25c ¼ pk; asparagus, 8@12c bch; rhubarb, 3@5c bch.

Fruits—Apples, 18@35c ¼ pk, $2@3.50 bu; strawberries, 13@20c qt.

Retail Grain Market—Wheat, $1.90; corn, $1; rye, $1; oats, 75c; bran, $1.90 cwt; middlings, $2.30 cwt.

Wholesale Grain Market—Wheat, $1.60; corn, 72c; rye, 85c; oats, 55c; bran, $38 ton; middlings, $44 ton.

BALTIMORE PRODUCE

Eggs—Quotations: Current receipts, free cases, all sections, 28½@29c.

Live Poultry—Chickens, old hens, 4½ lbs and over, 31@32c; 3½@4 lbs, 32c; Leghorns and other light stock, 25@27c; old roosters, 20c; young chickens, springers, 2 lbs and over, 43@45c; springers, small size, 30@35c; springers, White Leghorns, as to size, 25@35c. Ducks, all kinds, 3 lbs and over, 30@32c. PIGEONS, young and old, pair, 35@40c.

Butter—Creamery, fancy, 42c; choice, 40@41c; do, good, 39@40c; do, prints, 42@44c; do, blocks, 41@43c; do, ladles, 33@34c; Md and Penna rolls, 30@32c; Ohio and West Virginia rolls, 30@31c; store-packed, 30@31c; Md, Va and Penna, dairy prints, 30@31c; process butter, 35@36c.

CHICAGO LIVESTOCK MARKET

Cattle—Compared with a week ago: Yearlings and medium weight steers little changed; weighty steers weak to 25c lower; mostly 10@15c off; steers, receipts predominating in run; supply slightly excessive; run about 7000 larger than a week earlier, 10,000 larger at $11 market; extreme top heavy, $10.65 paid early; best weights at $10.50; best yearlings, $10.40; trade for youngsters and desirable light heifers uniformly competitive; light heifers up to $10.35; steers of value to sell under $9 scarce; grassy cows and heifers in increasing supply, 25@40c lower; dry lot cows showing less decline; canners and cutters unchanged; bulls strong to 25c higher; vealers, $2@2.50 lower.

Hogs—Steady to 10c lower; no market for light lights and slaughter pigs; bulk of 240@325-lb butchers, $14@14.50; few, 180@210 lbs, $14.65@14.80; practical top, $14.80; packing sows largely $12.65@12.90; shippers took 500 head; estimated holdover, 4000 head; heavyweights, $13.85@14.55; mediumweights $14.25@14.80; lightweights, $14@14.85; light lights not quoted; packing sows, $12.50@13.

Sheep—Practically none on sale Saturday; for week 30,000 direct and 92 doubles from feeding station; fat native and western lambs, $2@2.50 lower; cull and yearlings, $1.25@1.50 off; fat sheep steady; feeders, steady to 25c higher. Week's tops: Fat western, $17.25; native, $16.50; fat yearling wethers, $14.50; fat ewes, $6.50; feeding lambs, $14.75.

WOOL MARKET

Boston, June 19, 1926.

Ohio and Penna fleeces—Delaine, unwashed, 44c; ½-blood, combing, 43c; ⅜-blood, combing, 42@43c; fine unwashed, 38@40c. Michigan and New York fleeces—Delaine, unwashed, 43c; ½-blood, combing, 42c; ⅜-blood, combing, 42@43c; ¼-blood, combing, 42c; fine unwashed, 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@42c; ⅜-blood 41@42c; ¼-blood, 40@41c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, June 19, 1926.

Cloverseed, cash, $22; October, $19.50; December, $15.85. Alsike, cash, $17. Timothy, cash, $3.60; September, $3.90; October, $3.85.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, June 21st. Quotations cover solid carlots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$29.75
Spring bran	29.00
Soft winter wheat bran	31.00
Hard winter wheat bran	29.50
Standard middlings	29.50
Soft winter wheat middlings	31.70
Flour middlings	35.00
Red dog flour	37.00
White hominy	31.20
Yellow hominy	31.00
Gluten feed	39.35
36 per cent cottonseed meal	39.00
41 per cent cottonseed meal	41.00
43 per cent cottonseed meal	43.00
34 per cent linseed meal	51.70

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Philadelphia Markets

SMALL lots of Pennsylvania strawberries have been arriving on the Philadelphia market during the week ending June 19th. This stock brought top quotations. On June 19 the best Pennsylvania berries sold at $8 to $8.50 per 32-quart crate. Most supplies have been from New Jersey and shipments from Delaware and Maryland have decreased sharply. Most sales of Jersey stock sold at $6.50 to $7.50, according to the Pennsylvania and Federal Bureau of Markets.

Receipts of asparagus continued light thruout the entire week and the market was dull for the most part. At the close, however, green grass showed a stronger tone. The increasing supplies of fresh vegetables are having a depressing effect on the demand for asparagus. Most sales of large green stock ranged from $3.60 to $4.50 per dozen bunches, while white stock sold at $3 to $3.60.

String beans from the Eastern Shore of Virginia arrived on the market more freely and the demand slackened. At the close most sales ranged from $2 to $3.50 per bushel hamper. Nearby beets and carrots were more plentiful and prices declined slightly. Prices ranged from 3c to 6c per bunch. Mushrooms were scarce and the market firm.

The new potato market strengthened during the week but weakened at the close. This was due chiefly to heavier supplies. The first Eastern Shore potatoes arrived on the market and brought top quotations. The highest price paid for this stock was $7 on Friday. At the close this stock sold at $6 to $6.50 per barrel.—W. R. W.

Feed Market Situation

FEED markets were unsettled during the week June 11-17 after the previous week's advance with prices of some feeds working lower. Rains over a wide area were beneficial to pastures, curtailing country inquiry, while prices of corn and oats worked lower and the hay market showed an easier tone.

Wheat feeds lost a good part of the previous week's advance. Middlings continued slow in eastern markets but were relatively firmer than bran in the West, largely on account of high prices for hogs. Demand for bran was slow at most points and Canadian pure bran was offered in New England 50c per ton higher than standard spring bran.

Bran for deferred shipment was also easier in the Southwest than a week ago with resellers pressing sales. Demand for shorts and other heavy wheat feeds was active at Kansas City with good inquiry from the Southeast and fair amounts going in small lots to nearby trade.

Linseed meal was unsettled. Prices were quotably unchanged in eastern markets where some export inquiry supplemented the dull domestic business. Prices worked lower at Chicago altho production continued light.—United States Bureau of Agricultural Economics.

What about the Sesqui?

(Continued from page 3)

filled in. Foundations have been laid, scores of beautiful buildings comprising the Rainbow City have been erected, miles of streets and sidewalks have been laid out and paved, hundreds of trees and shrubs have been planted, artificial lakes and canals have been dug. Beautiful flower beds cover the ground where steam shovels and grading machines were at work a few weeks ago. Even mountains have been built,—reproductions of the towering Canadian Rockies that dominate one corner of the Sesqui grounds. We saw them build those mountains. They are made of wood and lath and plaster, but now that they are finished they look like solid rock.

The Gladway covers 80 acres. In it is every device imaginable to give people a good time,—and the people who conceived some of those amusements had strong imaginations. You can ride a bucking flivver, a mechanical tumble bug or a twisting, climbing, diving roller coaster that will give you thrills and laughs enough for a lifetime. Dozens more of these fun-producers are being put into use as fast as they can be finished. Those mentioned, and many others, are now in operation.

The Exposition officials are doing everything in their power to provide for the comfort and convenience of visitors. There are several free camps for automobile tourists, altho, because all of the vacant land near the Exposition is low and wet, these camps are several miles from the Exposition grounds. There is a camp just north of Chester along the Delaware River, another near Ardmore along the Lincoln Highway west of Philadelphia, another along the Roosevelt Boulevard at Oxford Pike in the northeastern part of the city, and another across the Delaware River near Camden, New Jersey.

Information booths have been built near the railroad stations and along the main highways leading into the city. Rooms and boarding places can be engaged at any of these booths thru the official housing bureau.

Cost of Attending

What will it cost to attend the Sesqui? That will depend upon many things. The official housing bureau advertises rooms at $2.00 per day and up. That does not include board, which will cost from 50 cents to $2.50 or more per meal, depending upon the size of one's appetite and the kind of restaurant chosen. Automobiles can be stored in most of the public garages for $1.00 a day.

Transportation from the central part of the city to the Exposition grounds costs 7½ cents on the trolley cars (two rides for 15 cents), and 10 cents on the double-decked buses. Electric passenger cars will carry one over the main drives of the Sesqui grounds for 10 cents.

Admission to the Exposition grounds is 50 cents. There is no additional charge for admission to the principal exhibition buildings. However, some of the exhibitors in these large buildings charge 10, 15, or 25 cents admission to their individual exhibits. These extra charges are the exception rather than the rule.

Admission to most of the events in the Stadium and Auditorium is free, after the 50-cent gate fee has been paid, altho an extra admission will be charged for some of the events.

You Can See a Lot for Fifty Cents

We don't believe any visitor will feel that he has been cheated by the 50-cent admission charge at the gate. Without spending another dime he can view interesting things from the four corners of the earth.

The thrillers and fun producers on the Gladway all charge a few cents. It costs nothing to watch them, however, and that is enough fun for most of the visitors.

The railroads are offering reduced rates from distant points, and special half-fare one-day excursions on certain days from nearby points. Information about these may be obtained from any railroad ticket office.

When we celebrated the 100th anniversary of our independence 50 years ago one of the first telephone instruments was exhibited. By many it was considered a worthless toy. There was an electric light on exhibition, too. It was a great curiosity.

We wonder what curiosities are being shown during this celebration of our 150th anniversary that are destined to transform the world, as electric lights and the telephone have changed it in the last 50 years.

The Delaware State Building at the Sesqui-Centennial Exposition

Jersey Potato Crop

THE potato crop in New Jersey promises to be one of the best that has been grown in many years. The acreage is estimated to be 87 per cent of last year's planting, or 50,000 acres. In Monmouth, Middlesex and Mercer Counties there are approximately 20,000 acres and the stand and condition of the plants is excellent.

The fields have made a fine growth during the past two weeks and on some farms the vines are touching from one row to the next. The weather has been cool, which has helped to keep the stand fairly free from insects and the recent rains have been a great benefit. The condition of the crop is in contrast to that of last season when South Jersey was experiencing a severe drought. According to growers the crop is setting nicely, is free from scab and a much heavier yield than last year is expected. Unfavorable growing conditions resulted in yields on good farms of around 40 bushels to the acre while this year some of the growers expect to dig around 300 bushels.

Reports indicate that 73 per cent of the crop is expected to move by August 31 with the peak about the second week of August. In most years about 71 per cent is moved by September 1, but last year due to the light crop and good prices about 90 per cent was shipped by August 31st.

New Jersey's competitor, the Eastern Shore of Virginia, has begun to market her crop but the movement at this writing is light. Heavier shipments are expected after the 21st. The growers report an excellent stand and altho the plants in general have not developed large tops, it is believed that they have developed sufficiently to handle a good crop of potatoes.

The growing season in Maryland is late but a large quantity of northern-grown seed was planted which may bring the harvesting season nearly up to normal.

The crop in Florida is cleaning up and Georgia expects to wind up her early movement this week. The peak in South Carolina has passed and the height of the shipping season in North Carolina is expected during the next ten days.—W.

N. J. Field Day

THE gathering of farmers at the New Jersey Agricultural College and Experiment Station on June 16 was the largest in the history of the Field Day meetings. The low temperature of the day made it necessary to hold the formal meeting in the auditorium instead of on the lawn as planned. The large room, however, was too small and hundreds failed to hear the addresses. At 11 o'clock the meeting was called to order and Doctor Lipman, Dean of the College and Director of the Experiment Station, gave a short address in which he commented upon some of the problems before European farmers as he gathered from his recent visit abroad. He then introduced Doctor Thomas, the newly appointed President of Rutgers University. This was Doctor Thomas's first appearance before the New Jersey farmers and he was warmly welcomed.

The chief purpose of the gathering was to observe the work being done on the Experiment Station grounds. No station in the eastern states has a more interesting line of experiments, nor one which keeps the work tied up more closely to the vital need of the farmers, truckers and fruit growers than that of New Jersey. That the farmers of the state are almost solidly back of the Station and its work is shown by their eager attendance and by the interest manifested in the results of the experiments.

But Field Day programs are not confined to men and their interests. Probably half the number in attendance were women, and they showed as live an interest in the general meeting as the men.—R. P. K.

Prices and Prospects

SUPPLIES of eggs on the New York market were liberal during the week ending June 16 and considerable stock was moved directly into storage to avoid a loss. Nearby white eggs were plentiful and did not clean up well despite the lower prices. Pacific Coast eggs were in light receipt and prices held firm. The Philadelphia market weakened under more liberal receipts and trading was rather slow. Receipts for the week totaled 45,531 cases, of which number Pennsylvania supplied 2924 and Virginia 3054.

The New York live poultry market was generally steady thruout the week. There was a scarcity of light fowl and these sold well. Broilers held steady to firm altho express receipts of broilers were plentiful and in only moderate demand. Dressed fowl were in good demand and fresh killed broilers held steady.

The hay crop in Pennsylvania shows the effects of the cold dry weather which prevailed during May. Recent rains have helped the situation but it is unlikely that the crop will be as heavy as last year. Last summer's seedlings made a poor start owing to the drought in the fall. Pastures also have declined. These conditions also hold true thruout the Eastern and North Central States.

Wheat Market Held Firm

Unfavorable prospects for the winter wheat crop, together with less favorable conditions in the spring wheat area held the market firm during the week. The corn market advanced due to the active demand. The oats market was firmer as the result of more active buying by feeders.

Winter wheat and rye in Pennsylvania are not showing as good condition as last year due to the continued cold weather and lack of rain. The wheat is headed short and the stand is generally thin. Oats have germinated slowly on account of the lack of soil moisture.—W. R. W.

County News and Comment

Adams County, Pa.—The weather has been very dry and cold until about five days ago. We have had practically no rainfall the past month but last night had a heavy shower which will do much good. The corn is fully two weeks late with some poor stands, but it can look thin now and still make a good crop if weather conditions are favorable. Oats are short and coming in head. Wheat fair to good. The hay crop will be the shortest in many years and the clover has not caught good in the wheat. It looks as if we must change our methods of seeding or depend on other crops for hay. Apples and peaches are doing fine. Prices: wheat, $1.45; corn, 70c; oats, 50c; butter, 45c; eggs, 28c.—A. R., June 15.

Carroll County, Md.—Temperature is higher at present, having been cool and dry. Heavy rains have fallen during past two weeks. We had two hail storms, but to my knowledge no severe damage was caused by hail, except in northern part of county where it damaged gardens, orchards and growing peas for factory over a narrow belt. Rain improved looks of wheat which is in head. Barley is turning. Peas have improved; rain came at right time, while pods are filling. Corn looks better altho it is not up to normal in growth. Hay crops have shown wonderful improvement. Rain was too late for early clover but helped late clover. Grass is not only short but some stands are very poor, the fields being full of "methodist weeds." Some of grass fields have been plowed down and either put in corn, or hay substitutes will be sown.—H. I. R., June 12.

Centre County, Pa.—At last the long dry spell has been broken. For the last few days we have had thunderstorms and local showers which have done a lot of good. The grain and hay are very short. Cut worms have done great damage to the corn crop; crows, too, have been working on the corn. Blossoms of all kinds were abundant but the unusual weather conditions have caused much fruit to drop, especially cherries, plums and apricots. Deer are seen grazing in wheat fields. Probably they have been driven from their usual haunts by forest fires. Wheat, $1.50; rye, 80c; corn, 70c; oats, 35c; eggs, 25c; lard, 18c.—A., June 9.

Mifflin County, Pa.—Had a few heavy rains the last few days which washed corn fields and public roads. Most farmers were busy cultivating corn. A few others were putting up alfalfa hay. The heavy rain yesterday stopped both for a few days. There will probably be the smallest crop of hay for many years on account of dry weather this spring. Wheat is short in straw and many fields have a very thin stand. Corn is also small as weather is too cool at night. Most all fruit is indicating a large crop, especially peaches. Strawberries have been ripe for a week or more and a good crop. Markets: wheat, $1.75; oats, 40c. Dealers paying 27c for eggs; butter, 45c; lard, 18c; chickens, 30c; old potatoes, $2, and about all sold.—J. H. B., June 1.

Potter County, Pa.—A killing frost following many that were less severe injured gardens and many blossoms on fruit trees and strawberry plants. Some blossoms were advanced beyond chance of injury. Late varieties of apples did not blossom very well. The cold and drought retarded grain and grass but long, soaking rains coming June 10 and 11 have started marvelous growth. Potato planting nearly done, and even small potatoes of last year's crop are sold. Tent caterpillars are much in evidence. Farmers increased the acreage of such crops as billion-dollar grass, sowed corn, etc., because the grass grew so slowly. Prices: eggs, 30c; butter, 40c; potatoes, $1.50; veal calves, 10@10½c.—M. C. S., June 13.

Your Cows Will Fail!

—fail in weight, fail in vitality and fail in milk production this Fall and all next Winter unless they are fed something besides pasture right now!

"Summer Feeding"
P—A—Y—S

Feed Butterine Dairy Feed or Hammond Dairy Feed now as a supplement to grass. These feeds supply what the grass lacks. Keep a cow on grass alone and she will get less and less mineral and protein. Finally the amount she takes in drops below what she has to have to live on and to put into the milk she is producing. She, then, either commences to rob her body for minerals and proteins to put into the milk or else she gives less milk or both. To feed

Butterine Dairy Feed
(17% Protein) OR
Hammond Dairy Feed
(16½% Protein)

now counts heavily—it puts extra profits into the milk pail. You utilize all of your grass, get more milk the year 'round, save on next Winter's feed bill and make more money at every turn when you feed these ideal concentrates. They contain protein, fat and carbohydrates in just the proper proportion. Every cow in your herd will get plenty of nutritious substance on which to build muscle and strength.

For Feeding Economy

no other feed on the market compares with Butterine or Hammond. Thousands of dairymen use these great feeds year after year. Get a few sacks from your local feed dealer now. If he cannot supply you, write to us and we will see that you get what your cows need and what you want—Butterine or Hammond Dairy Feed.

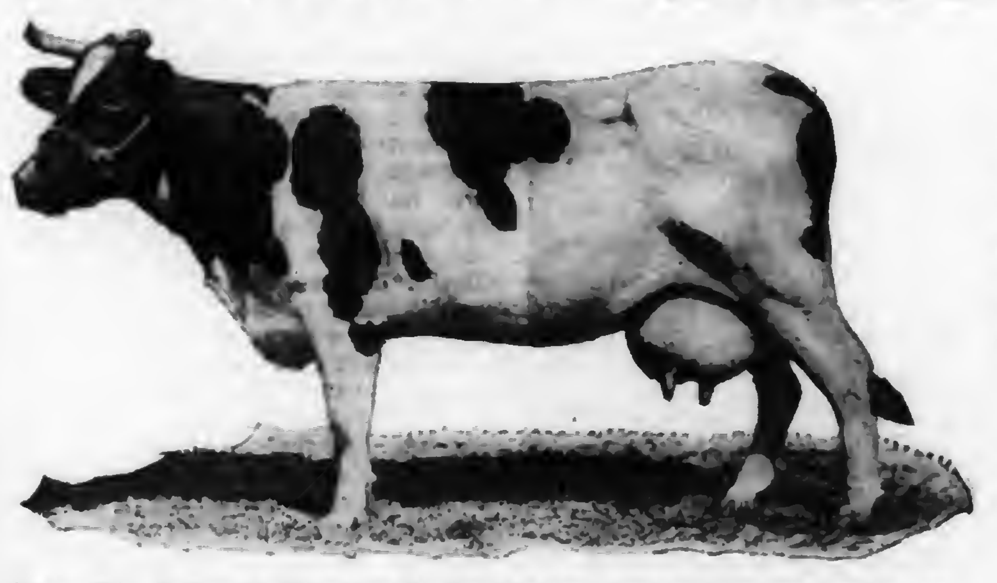
DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Testing Association Cows Make Big Yearly Records

A SEVEN-YEAR-OLD, purebred Holstein, Green Hill Bellwood Hengerveld, 678091, owned by Wm. H. Landis, of East Greenville, holds the state record for highest milk and butterfat production in cow testing associations in Pennsylvania for 1925-26. In addition to her high yearly record of 19,707 pounds of milk containing 791.3 pounds of fat, an average test of four per cent butterfat, she gave birth to a normal, healthy calf. She is a large, rugged cow of good type and a winner in the show ring. For almost three months she averaged 100 pounds of milk per day; her highest daily production being 105 pounds of milk on four milkings a day.

The Landis herd of seventeen purebred Holsteins, with an average of 12,484 pounds of milk and 440 pounds of butterfat, stands first in the Montgomery County Cow Testing Association for milk and butterfat production this year. The Ursinus College herd of Holsteins was a close second in both milk and butterfat, the Holstein herd of A. K. Rothenberger, Lansdale, third, the herd of Owen Gerhard, Palm, fourth, and H. K. Lesher's herd fifth.



Green Hill Bellwood Hengerveld, the highest producer in cow testing associations in Pennsylvania for 1925-26.

The Montgomery County association finished the year with 25 members. There were 433 cows tested during all or part of the year and the average production of milk per cow for the year was 7789 pounds and of butterfat 296 pounds. This is an average increase of 226 pounds of milk and 15 pounds of butterfat per cow above last year.

Favorite Not Always the Best

A summary of the records shows that the owner's "favorite cow" was not always the most profitable in the herd. In some instances the cow condemned as an "average cow" before records were kept, proved to be one of the most profitable at the end of the association year when complete records were summarized.

A grade Holstein, owned by one of the members, was put in this class, but the first test indicated that she gave a high test milk and with that information the owner decided to keep her and give her another chance the next month.

The following months further proved that she was a high tester and a persistent milker. The owner was surprised to learn at the end of the testing year that this "average cow" was the fifth highest cow in the entire association, having made 11,472 pounds of milk and 505 pounds of butterfat. She returned to the owner $264 above cost of feed, proving herself one of the most profitable cows in the herd.

The second year of the cow testing association shows that the members have improved production by better feeding, better management and better cows. The records afford a means of discarding low producing and unprofitable individuals and a large number of the herds made a big improvement in both milk and butterfat during the second year. F. E. Martin is the tester for the Montgomery association.

A Hard Working 10,000

TEN thousand cows were tested in Pennsylvania's 28 cow testing associations during April, or 10,044, to be exact. Of these, 1721 produced 40 or more pounds of butterfat during the month, and 2073 more than half a ton of milk.

The Laurel Hill Association in Bradford County had 120 cows in the 40-pound class, and the Clarion-Venango Association had 97. The Carbon-Lehigh group had the most half-ton milkers, 168. The Cumberland Association came next with 128 cows producing over 1000 pounds of milk tion. The Allegheny Association was in the 30-day period.

The Central Pennsylvania Guernsey Breeders' Association had 549 cows on test, the largest number in any one Association. The Allegheny Association was second with 435 tested cows.

Pulling Champions

MANY attempts will be made this summer to beat the pulling records made by Pennsylvania teams in last year's horse pulling contests. The present state champions are:

For teams weighing under 3000 pounds, 2920-pound team of grade Shires, owned by Harvey Moyer, Snyder County; record, tractive pull of 2700, made at Susquehanna Valley Farmers' Picnic.

For teams weighing over 3000 pounds, 3705-pound team of registered Percherons, owned by O. G. Poole, Mercer County; record, tractive pull of 2850 pounds, made at Stoneboro Fair.

A dealer in a western state believes that seeing is believing, when it comes to milking machines. Some time ago he mounted a mechanical milker on an automobile trailer, laid in a supply of rubber hose, and started out after business. He would drive the outfit up to a farmer's stable door, install the rubber hose pipeline, and give the dairyman a rest from hand milking for a few days. Needless to say, that dealer sold a lot of milking machines.

Here are some statistics on the amounts of butter shipped to Philadelphia by various states during May, 1926.

Minnesota	4,022,600 lbs.
Nebraska	550,998 "
Illinois	469,912 "
Iowa	464,001 "
Pennsylvania ...	79,417 "

The following states shipped more eggs to Philadelphia during May than Pennsylvania: Illinois, Indiana, Michigan, Missouri, Virginia.

Soy Beans—How to Plant, Harvest and Feed Them

> Could you please tell me how to plant soy beans and how to harvest them and feed them?—W. S. M., Schuylkill County, Pa.

Soy beans may be planted from May 10 to June 10, depending upon weather conditions and the type of soil. In a cold wet soil they germinate very poorly.

Under most conditions they make better growth when seeded in rows and given sufficient cultivation to keep down weeds, than when drilled broadcast. The rows may be placed 28 to 32 inches with beans 6 to 12 inches in the row, 2 to 3 beans in the hill. With medium sized beans this will probably require about 30 pounds to the acre.

If to Be Used for Hay

For hay where the land is fairly free from weeds, they may be drilled broadcast at the rate of 1½ to 2 bushels per acre. The seed bed should be prepared very much as for corn.

If soy beans have not previously been grown on the land, it would be best to inoculate. Inoculation may be accomplished by using either pure cultures or by the use of inoculated soil obtained from a field where soy beans have been successfully grown. Directions for using pure cultures will be found on the bottle containing the cultures. A simple method of soil inoculation is to take one gallon of fine soil from a field that is known to be inoculated and mix this amount with each bushel of seed after the seed has been moistened with water, or better with a weak solution of glue, (6 ounces glue to one gallon water).

The beans may be harvested for hay from the time the pods begin to set, up to the time the leaves begin to turn yellow. If cut while the plants are still in leaf, an ordinary mower and hay rake may be used. If allowed to stand until leaves have fallen, a self rake reaper may be used. Machines for harvesting and threshing the beans in the field are on the market, but they are not in general use. If interested, I would suggest that you write to the Extension Director of the North Carolina Experiment Station, Raleigh, and ask for their bulletin on machinery for harvesting and threshing soy beans.

Soy bean hay is about equal in feeding value to alfalfa hay and slightly richer than clover. The leaves and partially filled pods are the most valuable part of the hay.

The dry shelled beans are equal in value to cottonseed meal and linseed oil meal. They should be ground when fed to horses and cattle. This is not necessary for sheep and hogs.—A. W. Blair.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

RABBIT WITH LONG TEETH.—I have a doe rabbit that has long teeth. Teeth in lower jaw are growing into her nostrils, and teeth in upper jaw have grown down, touch the lower jaw and are turning up again. What can be done? She is very thin.—H. J. S., Jackson Center, Pa. Care should be exercised in the handling of this case so you should take this rabbit to your nearest graduate veterinarian and have the dental work cared for.

COW IS LAME.—I have a cow six or seven years old that has trouble with right hind leg. It seems to be in stifle joint. What is the cause and what can be done? Would it be well to breed her again soon?—A. P., Grampian, Pa. This cow probably has arthritis or inflammation of the joint. As a result the stifle may be out, a condition which is not very common in the cow. The usual plan is to keep the animal quiet for a time, bathing the part with warm water. The application of a liniment may be desirable. Your cows might well have access to a mixture of 4 parts steamed bone meal and 1 part common salt.

COW MAY HAVE FOREIGN BODY.—Our cow doesn't seem sick but acts as if she had pain. Both of her spells came just one week after she was in heat. She has free access to water and pasture. We feed corn and oats chop, three quarts three times a day. She drinks ten to twelve quarts of separated milk in water three times a day. When she has these spells she doesn't eat much. Are we making any mistake in caring for cow or feeding?—M. N. L. C., Alum Bank, Pa. This sounds like a case of foreign body. Your best plan would be to have this cow carefully examined by a graduate veterinarian. The treatment would depend on the results of such an examination.

County Fairs

THE time and place of holding 48 of Pennsylvania's fairs and exhibitions have been reported to the State Department of Agriculture as follows:

County	Place	Date
Armstrong	Ford City	Aug. 18-22
Armstrong	Dayton	Sept. 14-19

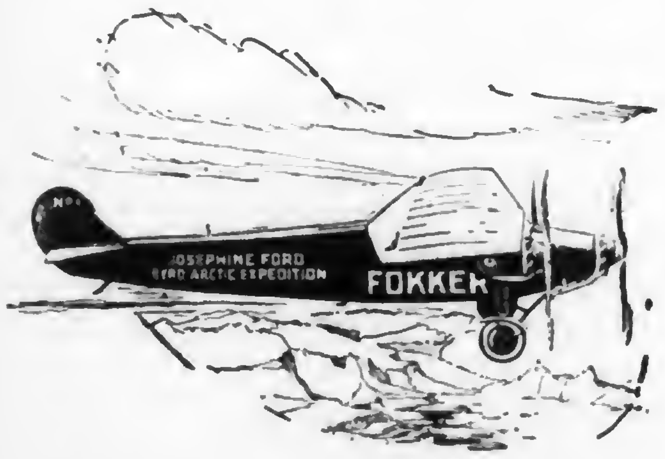
Commander Byrd radioed:
"Gargoyle Mobiloil functioned perfectly on sixteen-hour Polar Flight under severe operating conditions.
BYRD"

Byrd flies to the top of the world!



The Monoplane, *Josephine Ford*. Motored by three 200 h.p., 9-cylinder Wright engines. Consumes about 1¾ gallons of Mobiloil and 28 gallons of gasoline per hour. Cruising radius about 1,400 miles.

Kings Bay, Spitzbergen. Northernmost port open to navigation—a Norwegian possession. Byrd left *S. S. Chantier* here.

Lieut. Commander Byrd dressed for the Arctic.

Successful flight to North Pole in Mobiloil-lubricated plane has a special significance for farmers

BYRD'S history-making flight marks another great achievement for flying, for a Naval aviator, and for a Mobiloil-lubricated plane.

Commander Byrd chose Gargoyle Mobiloil as the one oil supremely qualified to meet the unusual demands made upon the Wright engines of his Fokker plane. He knew correct lubrication would be, perhaps, the most important single factor in the reliable operation of the airplane's motors.

Facing great hazards in Arctic ice, fog and winds, he could take no chances on faulty lubrication.

Tractor Engines and Airplane Engines

Your tractor, operating for long hours under full load, makes heavy demands on your lubricating oil. But here was a test on lubrication far more severe. The range of temperature was even wider, and the engines ran at wide open throttle for nearly 16 hours.

In Byrd's plane Mobiloil clearly demonstrated its superior ability to hold its body, and to maintain positive lubrication under full load and extreme heat. These same conditions occur in a less degree in your tractor. Are you taking advantage of Mobiloil's ability to meet them?

In 1924, Mobiloil lubricated the engines used in the U. S. Army Round-the-World Flight. The Mobiloil used in these flights was not a special oil prepared for the tests, but was the same Gargoyle Mobiloil that is on sale by good dealers everywhere.

Vacuum Oil Company, Headquarters: 61 Broadway, New York. Division Offices: Chicago, Kansas City, Minneapolis.
